835 La Honda Road, second alarm "Well Involved structure."
156.105 or http://firedispatch.com/audio/Control5.asx for you internet people :)

The audio on the scanner has been pretty quiet.

On a side note: For firedispatch, the initial fire dispatch and second alarms go to my arch pager, and second alarms only go to my Nextel. On this fire, I never recieved a second alarm or initial fire alert on my pager. Anyone else?
(Typically, I'll recieve the alert for the second alarm on my nextel 2 minutes before my pager - however I doubt it's a slow paging terminal as if I page myself, the longest I've seen it take is 45 seconds.)

Evan

Listening more to this system, I think 688 is really BPD's dispatch channel. Does anyone have a good map of talk groups for UCB?

Did anyone go? I was busy but drove past Durant/Telegraph around 2:15 and that block of Telegraph was blocked off. Later I heard about a group of about 100 who marched up to the Hall of Justice. Everytime BPD keyed up, you could hear the chanting :-)

Apparently someone got arrested and the crowd was trying to figure out how to engage a bail bondsman and get their comrade out.

As I'm sure most of you know, I'm quite the officer safety fan, however there's certain items that while they aren't public knoweldge, they certainly can be. And IMHO, what rig #'s are assigned to what area isn't one of them. There's been questions asked before that I was unable to answer due to the fact that I would be violating confidentiality / NDA agreements. Unfortunately, the location of the AMR units isn't in my scope of knoweldge.

I'd be curious to see what they think could be done with the knowleldge of what AMR unit is assigned where.

A little late, but my office is right off Sproul Plaza. They were using the UC 800 MHZ trunked system PD talkgroup 80. At it's height, they estimated between 700 and 800 people. Nothing major developed, thankfully. They had some yelling matches, people marched around, disrupted classes in Wheeler Hall, north of Sproul, but that was about it far as I heard. No real violence or property damage. 10393. First Day on the Job

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-10 16:41:35 UTC
From: PHILIP HUMES
Topic: 10393 Message: 10393

The following article is from Spring 2002 CHICO STATEMENTS, CSU Chico.
I found it to be interesting

Reproduced with permission from Chico Statements magazine, copyright 2002,
California State University, Chico.

First Day on the Job
by Sue Reynolds and Marion Harmon

Brogan Healy graduated from CSU, Chico in May 2001 with a bachelor's degree in history. He then landed his first job as a firefighter in New York City. His first day of work? September 11, 2001.

Instead of spending the day at the firehouse uptown as he expected, Healy was sent downtown to the site of the collapse of the World Trade Center's twin towers. He spent three days straight working at Ground Zero. Then Healy and the other rookies were sent back to their firehouses, as the more experienced firefighters proceeded with the dangerous work.

" 'What is it like down there?' Everyone asks me this question. You can't imagine," he said a few weeks after the collapse. There is a long pause, then a sigh. "It's really hard to describe. There are giant waves or ski slopes of metal debris every way you turn. Huge cranes, dump trucks, backhoes-heavy earth-moving machines are lined up at the perimeters, waiting their turns to go in.

"It's our job as firefighters to assist with the rescue or recovery of victims. But lately, when I have gone down to the site to work, I'm told simply to stand by; all I can do is watch the machines lift and carry off load after load of debris. And then, every once in a while, there will be a body part in a load. It's just gruesome."

Healy worked double shifts at the disaster site into November. On days off, he volunteered to work at the crash site, covered the shift of a firefighter who wanted to attend a funeral, attended a funeral himself, or slept. None of Healy's co-workers from Ladder Co. 34 or his friends from other ladder companies died in the tragedy, but five of his instructors from the New York Fire Department Academy were killed. He says that firefighter volunteers now are working down there in 30- or 60-day shifts on a rotating schedule.

"It's just something that none of us have ever been through," says Healy. "I was brand new, but even for the older firefighters, it was a war zone, and an unbelievable amount of destruction. We just kind of plodded along every day; we'd show up and dig. You're just driven by something, that you can't leave those people there, you've got to get them out. There's just this driving force that pushes you ahead every day.

"These firefighters that have picked up the assignment to go down there, that's a tough assignment because it's just very sad. It's tough to describe to other people who haven't seen what it's like. So many times you go down there and you don't find anybody, and that's just really discouraging. You almost start to find a little bit of satisfaction in finding people or remains because at least that would be some closure for their family."

Healy says that it is hard for him to grasp the reality of the World Trade Center crashes, even though he has been at the site. "But what does hit home are the funerals," he says. For months there were several funerals every day for New York firefighters, and among the mourners were firefighters from all over the country.

"It was tough to see any larger picture for the first month or two because I was heavily involved in digging my friends out of the pile, so I didn't watch the news," recalls Healy. "My life was just working at the firehouse, working at Ground Zero, and going to funerals. And there was just no time to worry about what our military might be doing, or how other people in the United States were dealing with this.

The people who live in the neighborhood near the firehouse in Washington Heights were very supportive, says Healy. "Firehouses all over New York were decorated with cards and lit candles. Our neighbors held prayer sessions in front of the firehouse and brought us food," he says. "It's a pretty tough neighborhood, and a real sense of community developed among us. I sure hope the city doesn't lose this bond."

Now that Healy's training is complete (cut from 14 weeks to eight because of the Sept. 11 tragedy), he has moved about 20 blocks south to Ladder Co. 40 in Harlem for his permanent assignment. And while the events of Sept. 11 are not at the front of firefighters' minds like in the first few months, says Healy, they still have a big effect on their life.

"You can't ever get away from it," observes Healy. "But time heals wounds, I guess, and it doesn't set the mood for every day like it used to, maybe because the firefighters I see on an everyday basis at the firehouse aren't going down there to work. Those who are down there working, we only see once a week or so when they stop in and say hello."

Healy has always wanted to be a firefighter, noting that the desire to join the profession seems to run in families. His grandfather was a firefighter in San Francisco for 30 years, and an uncle was a firefighter in Santa Cruz, where Healy's family lives. Healy got his associate's degree in fire science at Butte College during a break from his studies at CSU, Chico. Once he had received his bachelor's degree from CSU, Chico, he went to New York City. He chose New York because he wanted to work in a large, busy city where he would really be needed.

"Not all fire departments are as aggressive as New York, and a lot of people would say none are," notes Healy. "We take certain risks that other departments wouldn't, and that's part of the reason I came out to New York, it's because New York is considered the best. I say that with pride because I moved across country just to do this, and now, unfortunately, after 343 of us died, the world knows how aggressive we are. Some departments wouldn't have sent so many people into those buildings, but we understand that the lives of the civilians come first, and who knows how many thousands of people those 343 firefighters saved, so they did die as heroes."

Since the fire department is called upon to solve an enormous number of public safety problems, a typical day on the job, if there is such a thing, might include answering a call for help with a water, gas, or radiator leak; lifting people out of stuck elevators; attending to the injured at car accidents; and, of course, fighting fires.

"I really love going to work!" he says. "It's well known that firefighters go to work early, even an hour and a half early, just because they love their work. I don't know why we love what we do. It's tough to explain to somebody who doesn't work in our profession. There are a lot of different levels. I enjoy driving to work every day because I know that

the guys that I work with are great, and I know that we're going to have fun at work. It's a real family. There's just a big sense of camaraderie when you go to work, that you know you can depend on each other. And especially when you work in a busy place, and where I work now is a pretty busy place. You know that those guys are good, and if something goes wrong, you can depend on each other."

Healy says that a lot of the firefighters who died on Sept. 11 were not officially at work when the disaster call was made to their stations (shifts begin at 9 am and 9 pm). Some had simply arrived at work early, and so they went along with those still on duty when they answered the call.

But Healy says he's not surprised that they came to work early. "At fire science school," he says, "they used to tell us all the time, 'Some day, when you're a firefighter going to work, you'll pass a lot of unhappy-looking people who are also going to work. But every once in a while, you'll pass someone who is really smiling, and you'll know that that person is a firefighter.'"

"And it's true," says Healy.

Subject: [NWPRRfan] Historical Movie Night April 18th...

Just a reminder to everyone that the Northwestern Pacific Railroad Historical Society is planning an historical movie night Thursday, April 18th at 8:00pm in the Activities Room of the Whistlestop (3rd and Tamalpais St.) in San Rafael. Group archivist Allen Tacy will be pulling some wonderful and rarely seen footage out of the vaults for this show. As usual, light snacks and refreshments will be served and all are welcome!

From: http://www.mowonline.org/calendar.htm
NWP Excursion
Saturday, April 20th
MOW is offering, what looks to be, the one and only excursion on the Northwestern Pacific Railroad from Willits, CA to Cloverdale and return. This will be a joint run with PRO who will be operating a separate excursion from Cloverdale to Fort Bragg and return and we will meet in Ukiah. We will probably stop for lunch in Hopland on our trip south.

The price is $85. MOW License, NARCOA Insurance Number and NARCOA License # required.

All operators are invited.

Checks should read MOW and please send to Doug Jensen, 12463 Valley View Rd. Nevada City, CA, 95959.

For more information please email me at bdouglas@... or call 530-274-9244.

From: http://www.pro-online.org/calendar.htm

Apr 20, 21 SOLD OUT - Waiting list started 03/22/02

NWP/Cal Western - April 20 and 21, 2002. PRO is pleased to announce a very unique motorcar excursion. We will run on two railroads in the same day. We will start out in Cloverdale on

the NWP traveling through scenic vineyards, tunnels and parallel the beautiful Russian river. We will have a meet with our friends from MOW at Ukiah as they come down on their run from Willits to Cloverdale. We will then proceed up and over Ridge and interchange on to the Cal Western where we will travel to Fort Bragg. The Cal Western provides some of the most spectacular motorcar running in the country where we will be traveling 8 1/2 miles by rail to go the distance of 1 1/2 miles. We will go through gorgeous redwoods running next to the Noyo River. There will be a stop at Northspur on our way to Fort Bragg. We will spend the night in Fort Bragg and return Sunday to Cloverdale (this will repeat Saturday's run without the meet with MOW). Be sure to sign up early for this one-of-a- kind run!!! The meet coordinators for this trip are Tom Slivka and Steve Paluso. The cost of the run is $250. Please send your checks payable to PRO and a large self-addressed stamped envelope (with at least 57 cents postage) to Steve Paluso, 2878 Rosario Court, San Jose, CA 95132. Any questions, email Steve Paluso at sbpaluso@... or phone Steve at (408) 956-8070 between 5:00-9:00 pm or Tom at (707) 996-6238 between 7:30-8:30 pm. Run is limited to 25 cars. No refunds guaranteed for cancellations after April 5. Need NARCOA license and insurance. NARCOA rules and PRO general order #2 are in effect (please check the PRO website for the text of the general order).

Ben
you need to understand that just because the freq.s are assigned to them
does not always mean that they will be on it any time soon ,Case and point
is San Jose fire 155.025 it was announced about three years ago that that
freq. was to be the new primary and that was re announced this February and
here we are in April still waiting . My brother who is a dispatcher in
Santa Clara tells me that Santa Clara is in the first stages of looking
into a full county wide trunk system like ALCO he says it will be five to
eight years before it happens though.....At 08:36 PM 4/10/2002, you wrote:

10401. 2-meter repeaters in Mendocino/Sonoma county area?

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-11 05:17:12 UTC
From: Harry Marnell
Topic: 10401 Message: 10401

For the upcoming rail motorcar ("speeders") trips the weekend of April 20-21, can someone recommend a couple good wide-coverage 2-meter ham repeaters in Mendo County?

Specifically, there will be two groups running on the ol' NWP in opposite directions between Willits and Cloverdale, with a planned meet at Ukiah. Is there an open repeater or two that can cover that entire stretch?

One of the groups will also be operating from Willits to Fort Bragg. How about repeaters for that geographically-challenging stretch?

For info on the trips, see http://www.mowonline.org/calendar.htm and http://www.pro-online.org/calendar.htm

From: gary
Topic: 10402 Message: 10403

You can search the FCC database with a radius search if you can determine the coordinates of the tower.
http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts
If the tower is new, there may not be any transmitters on it. Typically the tower is owned by a company who leases the location. American Tower is typically the owner in the places I have visited.

If the site is federal, there is generally a warning sign indicating so, such as the federal antenna site on Mt. Tam. FAA sites have an additional warning about the dangers to others regarding messing with their equipment. [I can't recall the exact wording.]

Bottom line is to drive to the site and check it out, and if you have a GPS, log its coordinates.

Is it one of these? Go to: http://makeashorterlink.com/?M51620AA and
it will redirect you in about 10 seconds. If it's not one of those,
then you can fiddle with the search parameters.

FYI, all transmitters (more or less) have to be licensed, but not all towers. [To my knowledge, the tower registration depends on AGL height.] I would still check the FCC registry.

Gary

You are correct. The general rule in 200 ft or higher or near an airport.

See http://wireless.fcc.gov/siting/asr.html for more info.

From: reno_huskerdu
Topic: 10412 Message: 10412

I never heard more on CHP freqs about that pursuit, but now LPD has a perp detained, stolen red car with minor damage, keys in the ignition (dummy!), and Tracy PD is in route to take the perp into custody. Sounds like the same case. Seems the perp's probation was revoked yesterday. I hate it when that happens...

KPFA will probably run this as a prime time story about vicious police harrassment of a single father who's just trying to get his life back on track and get more tatoos to maintain his self esteem.

Yahoo is at it again! Urgent protect your info!

Please let everyone you know, know of this right now!

Yahoo is now using something called "Web Beacons" to
track you around the net & see what you are doing. ...like
cookies......

Take a look at http://privacy.yahoo.com/privacy/us/pixels/details.html
Somewhere about halfway down the page in the right hand
side paragraph, there is a blue tiny little link that lets
you opt-out of their electronic snooping.

I advise everyone to do so immediately if not sooner.

Also note that when you opt out, a window opens that says
you have successfully opted out, but also says that if you
want ot cancel opt out to press the small window below.

DON'T click the small window thinking that it is the final
opt out. NOT!!!!!

A bit off topic, but yahoo has plans to charge $1.99 to talk to customer service, so if you have password problems, do it now while it is free.

I personally think it is time to move the group to a more friendly service.

Just because you get the "white one" on the pager does mean they will really be on that channel. For instance, when they put out an Alert for SFO on the pager, it indicates White one, BUT if no San Mateo County units roll, you hear nothing...monitor SFFD Airport/Crash on 453.775

It is the same call, a cellphone caller got Menlo Park who called Fremont. On calls on/near the Dumbarton, its a dual response, actually 3 way response sometimes involving Fremont, Menlo Park and Newark's Truck Fremont on their channel one was investigating (35216) I didn't hear the outcome, but as another post said, they caller indicated two men out and walking, was not a crash but an emergency landing. Eagle was requested by Fremont. Anybody monitor Fremont (I was trying to listen to the 9th inning of the Giants/Dodgers game [(giants lost :-( )) and the incident at the same time.

There should be a FCC tower ID somewhere on the tower or nearby. It
should be something like 1014680. You can use that tower as an example
to lookup via FCC.

Oh yeah, I forgot about Napa 10 , need a p/l there too. Now if I could only get SF from here :-(I can get it from McDonalds two blocks away ? Weird ,,,,,,Opps, hear sirens fellas, got to turn the scanner on! Oh ... only an EMS call around the corner
BTW, did you all read about the new Statue in Sacramento by the Capitol and a memorial to all Cal. FFs who have died in the line of duty, had a big ceremony recently, I plan on visiting it sometime this spring.
Menlo Fire and CATF 3 is holding a dedication of 3 new cranes added to the task force behind Station 77 , this is on Firedispatch.com, problem is, it doesn't say what age....I emailed them to find out. They have loads of equipment there, for those interested, its on Chilco off Bayfront Expressway in East Menlo Park ... not far from Willow Road. When I get the date, I will post it here.

KUJ590 is Lake county. The frequency checks out for this callsign.

Probably on some 20,000 foot mountain top up there.

Well GREAT, Ben... now I've got the itch to get my antenna out of the
attic and onto the roof.
If you go to http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts
you can search by callsign, licensee, several frequency options,
lat/long, etc... it's the FCC's online database.

Harry

Within the license the site will have an address, or a rough location,
otherwise your best and perfect way is via lat/long just above the
address location.

Btw, that callsign corresponds to Lake County???

Well GREAT, Ben... now I've got the itch to get my antenna out of the
attic and onto the roof.
If you go to http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts
you can search by callsign, licensee, several frequency options,
lat/long, etc... it's the FCC's online database.

Harry

10449. Tiburon antenna critics claim proposal is flawed

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-12 18:28:48 UTC
From: robert sanford
Topic: 10449 Message: 10449

Here is the latest in the continuing saga of the Marin Radio Authority trying to secure the last antenna site needed for the new radio system in Marin County. I know the system is suppose to be digital and trunked but it might be in the 400 Mhz range which Im not sure if the new Uniden Digital Scanner will be able to handle or not.

Tiburon antenna critics claim proposal is flawed

By Richard Halstead

Residents opposed to the construction of a Marin Emergency Radio Authority antenna near their homes on Mt.Tiburon have discovered what they believe may be a silver bullet to
kill the proposal.

Speaking before a special meeting of the Radio Authority's board of directors yesterday,
members of the Mt. Tiburon Property Owners Association and Citizens for an Open Process in
Antenna Siting asserted that the Radio Authority's Federal Communications Commission
license does not authorize an antenna of the height the authority wants to build on Mt. Tiburon.

The Radio Authority has proposed building a 65-foot monopole but its license authorizes an antenna of only about 35 feet, said Gary Izing, an engineer with VikinGlobal Corp. hired by the antenna opponents.

"It's a major flaw," said Izing, who has overseen the deployment of wireless networks in metropolitan areas. "I'm telling you this is a serious matter."

The licensing discrepancy was discovered by the Washington D.C.-based law firm of Patton Boggs, which the opponent groups recently hired. A challenge to the modification of the license could tie
the project up for months if not years, Izing said.

He also questioned the effectiveness of placing an antenna at the Mt. Tiburon site. Izing said his analysis showed better radio coverage could be provided by placing an antenna at the Fort Baker sewage treatment plant, south of Sausalito.

Radio Authority officials and board members were unavailable for comment because they adjourned into closed session soon after the presentation.

Months behind schedule and about $1.4 million over budget, the Marin Emergency Radio Authority is struggling to secure the last antenna site

crucial to a new $26.9 million countywide public safety radio system - before high overhead costs kick in at year's end.

Martin Nichols, the authority's executive director, says Mt. Tiburon is the only location available that will permit the Radio Authority to begin construction in June, as it must to compete the system by the end of the year. The system was originally slated for completion in December 2001, he said.

Nichols has said that the Radio Authority is contemplating taking some kind of legal action to secure the site, at 99½ Mt. Tiburon Road in Tiburon. Although there have been rumors of a possible eminent domain action, there was no clue at yesterday's meeting as to what action the Radio Authority is contemplating.

The Authority - consisting of 26 Marin public agencies, mainly police and fire departments - initially threatened to sue the town of Tiburon if it refused it permission to build the Mt. Tiburon antenna. In 2000, the Tiburon Planning Commission unanimously rejected the Radio Authority's request for permission to build there.

But Nichols has said the Radio Authority no longer has any intention of suing Tiburon.

Tiburon Town Manager Alex McIntyre said yesterday that he was concerned, however, by the Radio Authority's vote to consider altering the indemnification of its members, which includes the town of Tiburon. McIntyre said the proposed change, which could be approved at the Authority's next meeting, would remove the legal protections that Tiburon and other members of the authority currently enjoy related to the radio system.

If the change were adopted and Tiburon were sued by a resident who opposes the antenna or, presumably, by the Radio Authority itself, the town would have to foot the legal bill.

"We would take the heat," McIntyre said.

10450. Re:Governors Want More Emergency Spectrum, WELL....

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-12 20:33:10 UTC
From: Harry Marnell
Topic: 10450 Message: 10450

Maybe it's available right now if they just LOOK???

My totally unscientific obsevation and (thus unsupported) conclusion is that MANY businesses, especially smaller service-type outfits such as construction, plumbers, delivery services, taxicabs, etc etc have found that using cellphones is a much more flexible and cost-effective way of communicating.

Mny locals in the semi-rural area where I live have quit using their 2-ways and rely on cellphones exclusively. This frequently obviates the need for a full-time office worker/dispatcher or paying an answering service to answer every phone call that comes in. Many of these folks are using their cellphones as their primary or only business line, and answer calls for service from on-the-road or at worksites. They're cancelling 2-way radio service / repeater use contracts and simply unloading the radios any way they can.

Which is the first half of my question. Has anyone noticed this trend in larger cities, and does it appear to have left previously busy "business" and other frequencies practically dead? Any studies been done to see if hundreds of these freqs couldn't be put to use TODAY for public safety? (e.g., many former 'forest products' channels have historically sat unused in metro areas; motion-picture and media freqs are quiet as a church-mouse in rural areas.

Is this a developing asset that's been handed to us an an accidental side-effect of the explosion of wireless? And HEY, thousands of public-safety agencies probably have many thousands of VHF and UHF mobile and portable radios just sitting around gathering dust...

Just a thought... before my morning coffee even...

Harry Marnell, N6URU
(former CPRA member in reasonably good standing, though I find myself SITTING more these days)

From what I've come across via FCC it will be a T-band trunked system,
probably mixed mode, so there shouldn't be any problem tracking the
system now and when the APCO-25 scanner is brought to the consumers.

The network looks basically like a rough clone of San Mateo's system.

So you are saying you think I will be able to monitor the new system "when
and if" it ever gets put into place with the new Uniden scanner??
I thought I might have to purchase an ASTRO Saber or something.

Thanks Robert

Robert, if the system was going to be fully ASTRO with no analog use whatsoever (I doubt that since FD should not be digital, especially with a new system) and Uniden wasn't going to produce a digital scanner, yes, you would need to buy a Moto radio.

I don't own a 780 but I believe they will trunk from 406 to 512 so programming the Marin County network into it should work fine. You'll just need the base and spacing.

Once the 785 and 250 become available you should be able to track the network as best as you can (and in most cases, all you'll ever need) with an aftermarket radio.

As typical with most SmartZone networks, you need a subscriber affiliated to the site in order for the site to broadcast audio for that subscriber's talkgroup. The thing about that is there are usually sites within a SmartZone network where high traffic occurs making the previous moot.

All in all, you should not have any problems whatsoever. Unless they encrypt, but they're seriously over budget as-is, so I doubt all LE will be encrypted (Like Orange County, CA).

Wayne

10470. MONTEREY COUNTY COMMUNICATION problems?

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-13 13:22:37 UTC
From: Pam & Jeff Schiller
Topic: 10470 Message: 10470

All fire dispatches are being done from the " Me-co" due to major power failure ....
so to answer my earlier question Me-co must be there mobile communication van
This covers all county fire dispatches on red 154.370 they will run on low power
they are manning the Monterey center for the Monterey pen. and Carmel valley they will dispatch on gold 154.175 for duration of problem
.....seems to me there Med com is down also or very quiet gonna check PD's next

10471. Dumb doper tale (another RDDB?)

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-13 16:21:07 UTC
From: reno_huskerdu
Topic: 10471 Message: 10471

Yesterday about 1300 a 32-yr-old man called 911 in Livermore to complain of bleeding from the nose and mouth. He told the Dispatcher that he had been using METHAMPHETAMINE the day before, then he took a bunch of vitamins and echinacea later.

The Dispatcher sent LPFD Medics. But of course LPD Officer(s) went in first to assure scene safety and prepare the subject for his later stay in Disneyland*. Are all dopers this dumb?

Ben, did you catch this one? Or were you busy monitoring Seattle's trunked system? ;=) Mike?

*crook term for jail

Subject: [bayscan] Dumb doper tale (another RDDB?)

Yesterday about 1300 a 32-yr-old man called 911 in Livermore to complain of bleeding from the nose and mouth. He told the Dispatcher that he had been using METHAMPHETAMINE the day before, then he took a bunch of vitamins and echinacea later.

The Dispatcher sent LPFD Medics. But of course LPD Officer(s) went in first to assure scene safety and prepare the subject for his later stay in Disneyland*. Are all dopers this dumb?

Ben, did you catch this one? Or were you busy monitoring Seattle's trunked system? ;=) Mike?

*crook term for jail

Seems a discone is the only way to get wide-band scanning action.

Anybody ever put a discone in a vehicle? How did it look? Did people point and laugh when you drove up? Or was it the model of discretion and taste.

Ben, can't answer your question about grounding. But last night, you thought you were getting SFFD. but one of your post, you indicated a TG of 8208 I believe, that is Sacramento County Sheriffs, in fact you mentioned north county patrol which that TG is exactly that. Also mentioned you heard an Engine 21 and Truck 21 , SFFD does not have a Truck 21 (they do have and Engine 21) I am not sure if Sac. CO has a Truck 21 or not. Both San Francisco and Sacramento Co. systems share two frequencys on their systems , 867.4375 and 868.4375 Were either of these your control channel?

From: Ben Kellogg
Topic: 10454 Message: 10492

A Yagi antenna, also known as a Yagi-Uda array or simply a Yagi, is a unidirectional antenna commonly used in communications when a frequency is above 10 MHz. This type of antenna is popular among Amateur Radio and Citizens Band radio operators. It is used at some surface installations in satellite communications systems.

A basic Yagi consists of two or three straight elements, each measuring approximately 1/2 electrical wavelengths. The antenna can be balanced or unbalanced. The Yagi is inherently a balanced antenna, but it can be fed with coaxial cable and a device called a balun at the point where the feed line joins the driven element.

The driven element of a Yagi is the equivalent of a center-fed, half-wave dipole antenna. Parallel to the driven element, and approximately 0.2 to 0.5 wavelength on either side of it, are straight rods or wires called reflectors and directors. A reflector is placed behind the driven element and is slightly longer than 1/2 wavelength; a director is placed in front of the driven element and is slightly shorter than 1/2 wavelength. A typical Yagi has one reflector and one or more directors. The antenna propagates electromagnetic field energy in the direction running from the driven element toward the director(s), and is most sensitive to incoming electromagnetic field energy in this same direction.

The Yagi antenna not only has a unidirectional radiation and response pattern, but it concentrates the radiation and response. The more directors a Yagi has, the greater the so-called forward gain. As more directors are added to a Yagi, it becomes longer. Some Yagi antennas have as many as 10 or even 12 directors in addition to the driven element and one reflector. Long Yagis are rarely used below 50 MHz, because at these frequencies the structure becomes physically unwieldy.

Sacramento is a nice system to listen to, very busy. I have stayed up there a few times, always take a min. of 2 scanners. One for city and one for county, end up needing 3 . One for Sac. CO Fire, one for S/O and one for Sac City PD.....busy area. cheaper than going down to LA. I used to go down there for stuff and always bring the scanners with me, too bad LAPD went digital. but Sac is so much closer, give me a chance to get out of dodge for day or two.

No, none whatsoever. The primary purpose is for electrical discharge.
You prevent your equipment from getting a nice hit.

But, if you put the grounding kit on incorrectly you could mess up
reception by damaging or improperly sealing the coax.

I don't recall how high you said your antenna is but in the commercial
world, regardless of how many electrical storms we do get, the coax at
the point of the antenna, and near where it goes inside, are grounded.

If there are not a lot of structures or 'nature' around taller or a
similar height, I would recommend grounding to whatever you can.
Hopefully you have a cold water pipe nearby, or possibly the ground
rod. Using a fence pole or something a foot or two feet isn't
recommended. 6-10 feet is what is recommended but that's pretty hard
to do for one simple project. Typically 4-10 gauge wire is used. And
try to keep the length of the ground wire as short as possible,
definitely don't exceed your coax run.

I drove all over SoCal on Saturday Night T-hunts with a 2-meter three element beam on the right side of the car. Discretion and taste? Not really. Yes, people did stop and stare.

BTW, WB6TDO and WA6UBW were my partners and we won more than our share of t-hunts. We were GOOD!

"Anybody ever put a discone in a vehicle?" Yes (sort of).

"How did it look?" Fine, sort of.

"Did people point and laugh when you drove up?" Yes, of course.

"Or was it the model of discretion and taste." Yes, of course!

heh!

I took a Radio Shack discone, sawed off the disk, then mounted the cone upside down on the insulator from a ball mount, in teh middle of the car roof. It worked VERY well as a conical monopole. Had some problem with the RS crimped-on cone elements failing due to vibration.

Once heard a trucker calling ahead (my ten meter CW had bollixed his CB) warning other truckers that "the mother ship has landed!

Cortland

The youngest a red diaper baby could be is 42, using 1960 as a birth date cut off. [Weiner (Savage) added the term doper to make left leaning people look sinister.]

You can look at this DEA report regarding meth users, who tend to be college aged:
http://www.fas.org/irp/agency/doj/dea/product/meth/threat.htm

Ellie Nesler, cold blooded murder and poster woman for the radical right, was a meth user:
http://www.aptra.org/News%20Pages/CyberCitations.htm

The central valley is the meth capital of Ca:
http://caag.state.ca.us/publications/methlabs/index.htm
Need I remind you which political party dominates the central valley.

The CADOJ busts plenty of drug labs. Scan 154.68

Sorry to blind you with the facts. However, you may be right about Disneyland and Jail as I have no way to dispute that statement.

From: gary
Topic: 10454 Message: 10508

To elaborate a bit, grounding is not effective in the VHF and up range. Any ground you put in will look very high impedance at VHF (and higher) frequencies.

Grounding can help with broadcast band reception.

Tough to say on this one. If you check the FCC db it shows
up multiple times including KQED TV Channel 9, san francisco
and KTEH TV channel 54 in San Jose both PBS stations.

It also is under CBS, Infinity broadcasting and others. If I had to
choose I'd say mostly I've heard KGO AM 810 and KGO TV
channel 7 in san francisco.

10515. LAPD Vice Squad

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-15 06:29:49 UTC
From: robert sanford
Topic: 10515 Message: 10515

There was a great show on Court TV tonight about the SFPD Decoy Squad which is going to air again at 2:00 am if you want to set your vcr's to record it. It was one of the best produced shows I have seen on that unit of the SFPD and how they bust drug dealers in the city.
There is going to be a show focusing on the LAPD counterpart on this coming Friday at 10:00pm

L.A. Vice

Ride with the LA County Sheriff's vice squad, as The System takes you into the savage and dirty world of prostitution. For years it was a male-dominated department. Now women are an integral part of the unit. Meet a veteran female vice officer as she prepares two rookies for their first assignment -- posing as prostitutes. Witness an actual stakeout and see how they back up their male counterparts posing as "johns." This documentary reveals the secrets of the vice squad though the eyes of these female officers.

Im sure most of you on the list would enjoy this inside view into that aspect of law enforcement.

Jeff, it was at 3371 Brigadoon near Aborn about 4 blocks from Station 24. It came in around 6 am, went to a 2nd alarm in about 6 minutes . 2 burn victims , at least one with 3rd degree burns , " May" have been pulled out by SJPD which had at least 2 units arrive just before E24. They called a 3rd alarm about 6:40 which may have been for relief purposes. the IC declared it under control around 0750 but a number of depts don't declare fires "under control" until just about everything is cold. I am used to SFFD which puts fires "contained" , then "under control" but they don't wait until everything is completely ice cold either. Not sure if it was one or two stories but it was a fully involved residence.

it depends on the city. each city has it's own guidlines. for the most part. i'll use alameda county as an example.. when a second alarm is struck anywhere in alco a "yellow alert" is put out to the cities in alco. yellow alert is just an annoucement, no engines requested for mutual aid.. When a "third alarm" is struck, a "red alert" is called. depending on what zone, north, south, west or east, that particular zone coordinator is notified. For instance livermore lab fire is in charge of the east zone. If a third alarm is struck in the east zone the lab is in charge of coordinating mutual aid rigs to that incident. usually a third alarm in alco, will request either 1-2 engines and a truck from each municipality in the county to either go to the fire or as stand in cover in that dept jurisidiction...

From: reno_huskerdu
Topic: 10538 Message: 10538

I heard a couple of good ones recently. The Dispatchers left an open mic on PD main channel for a good five minutes a few weeks ago. You could hear them chatting about life, laughing about bad haircuts, agreeing that one particular cop was a real dick. I finally called them on the phone and informed them that the mic was open. You can hear red faces over the phone, you know.

Then there was the Dispatcher a few days ago who was taking a call from a woman whose husband had passed out. She dispatched FD, then left the mic open as she started getting SAMPLE info from the woman and reassuring her. She was very good, actually, but the FD guys were probably impatient as heck for an update on the incident.'

10540. Arson !!

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-16 05:15:26 UTC
From: reno_huskerdu
Topic: 10540 Message: 10540

Some things can't be learned by scanning. Thru other direct connections, I learned that the big fire at Castlewood in Pleasanton last week was caused by arson.

Um, lessee here. Multi-million dollar luxury house. Almost finished. For sale. Unoccupied. The market for multi-M$ houses has dried up. Then it gets torched. Looks a tad suspicious.

There were other interesting aspects to the fire. None of us were up to hear them. Smoke was first reported at 0330, but the responding LPFD crew could not find the source of smoke so they assumed it was a chimney. Another call came in about 0500, and the wildland fire guys in Sunol came out because brush was on fire.

But suddenly - waaaaaaaaaaaaaaoohhhhshiiiiiit - up the hill behind the burning brush they saw a huge house engulfed in flames! So then LPFD came out again, and they were there for 10 hours.

A man comes into the ER and yells, "My wife's going to have her baby in the cab!" I grabbed my stuff, rushed out to the cab, lifted the lady's dress, and began to take off her underwear. Suddenly I noticed that there were several cabs, and I was in the wrong one.
Dr. Mark MacDonald, San Antonio, TX

One day I had to be the bearer of bad news when I told a wife that her husband had died of a massive myocardial infarct. Not more than five minutes later, I heard her reporting to the rest of the family that he had died of a "massive internal fart."
Dr. Susan Steinberg, Manitoba, Canada

While acquainting myself with a new elderly patient, I asked, "How long have you been bedridden?" After a look of complete confusion she answered..."Why, not for about twenty years-when my husband was alive."
Dr. Steven Swanson, Corvallis, OR

A Nurse was on duty in the Emergency Room, when a young woman with purple hair styled into a punk rocker Mohawk, sporting a variety of tattoos, and wearing strange clothing, entered. It was quickly determined that the patient had acute appendicitis, so she was scheduled for immediate surgery. When she was completely disrobed on the operating table, the staff noticed that her pubic hair had been dyed green, and above it there was a tattoo that read, "Keep off the grass." Once the surgery was completed, the surgeon wrote a short note on the patient's dressing, which said, "Sorry had to mow the lawn".

10547. Re: [bayscan] SAN JOSE THREE alarm

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-16 19:03:55 UTC
From: caladded@aol.com
Topic: 10519 Message: 10547

Willie, let me add to that in regard to San Jose. 1st alarms are almost generated by citizen calls. Any reported structure fire in San Jose gets a response of 2 Engines 1 Battalion Chief and either a Truck(ladder) company or a USAR company(Urban Search & Rescue) . The USAR rigs are about the size of a large UPS or Beer truck and the members responsibility includes ventilation, Access, ladder work, Rescue. The Engine companies primary job is to get water on the fire, although a real explanation of each type of unit a fire would take me longtime. But again, basically Engines= water Truck/ladder/USAR - ventalation/access/ladders/rescue etc.
now , if either a Captain or Chief officer either thinks he may or is sure he needs more help, his usual move is to call a 2nd alarm. Any alarm over a 1st is ALWAYS called by the Fire Dept., I have NEVER heard of more than 1 alarm being called by anyone outside the fire depts. Getting back to San Jose, if dispatch is getting numerous calls on a fire, one of the responding units sees heavy smoke etc, they first will upgrade to a "Full 1st alarm assignment" this adds another Engine, Battalion Chief and either one more Truck or USAR company.
2nd alarm = 2 Engine 1 Truck (or USAR) 1 Battalion Chief, HIT(hazmat) 29 , and Air 6 (air bottles/cascade system) The HIT unit may just respond as a mobile command post. additional alarms =
3rd = 2 Engines 2 trucks or 1 Truck AND 1 USAR
4th= 2 Engines 1 Truck, 5th alarm, the same

San Jose usually starts calling for mutual aid on a 4th or 5th alarm
Hope this helps.
Ed

Yeah, they don't use it too often. I heard them use TAC 3 for some motor officer training at Great America last summer

well i did something similar where i used to work. i was on a law channel and dispatching animal control at the same time, so i had to have both channels up. even though i had both up, we had the capability of dispatching on one or the other or both. i dispatched on both for law and AC on the AC channel. same thing for our hospital ringdown channel. that was when we were really short staffed, still are actually, just not as bad.

I think that is the coast guard. They call it Vessel Traffic. I believe all ships moving into and round the bay have to report their position to Vessel Traffic control. It can be interesting to listen to when large tankers or cruise ships come into the bay.

That's Vessel Traffic you here being called "Traffic" They monitor all ships over a certain tonage and vessels carrying a certain amount of passengers. They have 3 channels to work with. There is channel 12,13,14. Channel 12 is inside the Bay and 13 is for ships comming from the South off of Pescadero and 14 is for ships comming from the North. They have multiple radar sights an cameras around they bay to see the vessels. Their "dispatch" is on Yerba Buena Island in the Bay. When and if you drive across the Bay Bridge - Westbound you can see their radar and antenna array ontop of the hill. There is a Tower you can see also but,it has been closed since the 89 Quake.

I use Prodigy DSL/SBC/PacBell Internet Services at $49.95 month. Got it because Pac Bell Internet Service were the only one, with my SSI income, who would finance a PC for me. Kept it after contract ended. My major problem was phone line from the TNC to my PC. Rewired it rather drastically, eg, ran three wires to both the green and red posts on the jack, and have had no problems since then.

My notes indicate SFO has a Motorola I, 5 channel system.
From 856.8875 to 860.8875. I don't live close enough
to pick it up in South San Jose but have when passing by.

I do pick up KSFO all the time!

That's the 800MHz one that's shared by a lot of airlines; he was asking
about a 400MHz system that's just for United.

FWIW, I can get the 800MHz system in the Berkeley hills.

It depends on what level of an ISP you're looking for. I work for a wired/wireless company, we offer everything from DSL to T3's, colo, etc. We have dial-ups, however those are for our DSL customers as a backup or 'home' option - we don't sell dialup accounts stand alone.

Let me know if this is what you're looking for. Our service and support is second to none. If you want cheap DSL, go to pacbell. If you want quality, support and service, we're it.

(No, I'm not comissioned.)

They are trying to set up some more talkgroups (tactical and surveillance) ... hope they say them on the air :-)

No hostages, but the guy is holding a gun ("5 shot silver snub-nose") to his own head.

Are we listening to the same incident? The guy on Frisco A6 has a black, 5 shot revolver and is no where near the airport. He's on a cellphone with the other hand. It's normal practice to have all captains and leutenants respond. Specialists are arriving now. Spec command is being set up. I didn't hear that he was trying to get in at all, just that doorways were to be closed, people brought out the rear, stay away from windows, etc.

There are several hostage negotiators on site. One had a rapor but was told to get in the car and drive further away (by his supervisor).

10607. Baker to Vegas

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-18 03:32:17 UTC
From: Bundy Chanock
Topic: 10607 Message: 10607

If you are interesting in watching the vehicle tracking for the Police Baker to Vegas run this next weekend, read on. If you are not, please delete.

This is my first year working comms. for Baker to Vegas. Over 10,000 police officers in 205 teams will relay race across Death Valley to Las Vegas starting Saturday.

Team Fremont is supporting SF FBI, SF DEA, Fremont and Concord PD's this year with 5 linked repeaters that our advance team is almost finished putting up on Potosi, Pahrump, Tecopa and Las Vegas. We're using APRS trackers in all of the vehicles this year and you can watch it all on the site listed below.

Bundy

I have zooming and display of APRSdos maps working on the Baker to Vegas page, as well as a table that calculates the position of each tracker on the course. Of course, the results are a little strange given that most trackers haven't been activated, and the active ones are 100 or more miles away. I have a couple of test calls in there with positions which fall on the course.

http://b2v.findu.com/

This APRSdos map implementation will only work on dynamic web pages, (which means only I can write pages like this) so don't ask! I have a volunteer working on a javascript implementation that should allow anyone to add this to their own pages. Stay tuned...

There is something major going on in Vallejo now. Here is what I got from a friend about it:

sounds like some big guy (345 pounds!) got stabbed multiple times, with perp barricaded in a house surrounded by VPD with guns drawn ,and on top of it the building is on fire! Calstar airlifting, lz for that too. pd and fire going nuts. so many fire units out they had to call in mutual aid to cover the stations.vpd has command post set up with lieutenants running around. man...some concerns now house may blow up!

10646. Tiburon council discusses sites for antenna

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-19 06:53:33 UTC
From: robert sanford
Topic: 10646 Message: 10646

Here is the latest in the continuing saga of the Marin Radio system.
I hope it takes them forever since we wont be able to monitor the new
system due to it being a digitally encrypted one. :(

Who knows maybe there might be a way if they don't encrypt it..

Tiburon council discusses sites for antenna
By Carla Bova

The Tiburon Town Council last night explored three possible sites for a
Marin Emergency Radio Authority antenna that would complete a new $26.9
million countywide public safety radio network.

Proposed locations include the Mt. Tiburon water tank on Mt. Tiburon Road,
the Sugar Loaf water tank off Place Moulin and on open space in Middle
Ridge off Gilmartin Drive.

Obtaining a site in Southern Marin is crucial to establishing the
communication system of at least 14 antennas that would link emergency
authorities across Marin and, according to MERA officials, close gaps in
the county's current radio system, which is obsolete.

Town manager Alex McIntyre said last night's meeting was aimed at gathering
information on each site, as well as to hear public comment on which site
the community feels is "the least offensive."

Mayor Tom Gram told 50 residents at the meeting that an antenna in Tiburon
is necessary.

"This is a system we have to have," Gram said. "I don't want to be the one
responsible if some calls 911 and our system does not work."

Jeffrey Pellegrini, with wireless communication company Green Drake
Engineering of Livermore, was hired as a consultant by the town to evaluate
the technical merits of the three sites.

He said the Mt. Tiburon site, favored by MERA, would need a 60-foot
monopole with a 15-foot receiving antenna on top that extends to the height
of 75 feet. It also would have two panel antennas reaching 35 feet up the
monopole.

This setup would achieve the minimum coverage required for the emergency
system.

"The Sugar Loaf site is higher up the hill and, in my view, would give
better coverage than the Mt. Tiburon site," Pellegrini said. "The Gilmartin
site, from a coverage standpoint, is lower than the other two sites -
however it is closer to the bay and has a better vantage point to downtown."

Other considerations for the sites are how high the antennas would need to extend and the visual impact it would have on nearby residents.

The Radio Authority is made up of 26 county agencies, most of which are fire and police departments. It is months behind schedule and $1.4 million over budget in building the communication system that includes microwave dishes, radio antennas and other equipment connected via sites in Marin. There are two sites in Sonoma County as well.

The system was supposed to be complete by December 2001.

MERA Executive Director Martin Nichols said after originally looking at 17 sites, MERA selected the Mt. Tiburon site and completed the environmental

reports.

"We selected it because it is owned by MERA member the Marin Municipal Water District, because it works technically to meet required coverage and because it has the least visual impact," Nichols said.

But some Tiburon residents opposed the Mt. Tiburon site, saying that having an antenna so close to their homes might pose possible health concerns due to radio frequency radiation. They also said the antenna would be a visual blight to the neighborhood.

"We want to try to find another site that is owned by the town, that has some height for coverage and does not affect homes," Gram said.

Nichols, however, said the Mt. Tiburon site would be ready for construction to begin in June, which would bring the project to completion at its new target goal of the end of this year.

Moving to an alternate site would mean a delay in meeting that deadline, which means MERA could face overhead costs of up to $50,000 a month by equipment manufacturer Motorola, Nichols said.

10647. Vallejo????????

I guess we were all sleeping. Con Fire called a 3rd alarm for a fire in one of those storage places early this morning. KTVU had good footage of this fire involving some 200 units , flames leaping well into the night sky. Con Fire had a least 3 ladder pipes in operation.

Yesterday I posted an inquiry about the Dublin situation at 11:30-11:45 and it posted to the site at around 4:30! What gives? This Yahoo system is getting worse. I know that every system is flawless, but cmon' Yahoo has been good at this lately.Oh well For any of you who missed what happened, I guess Dublin P.D. was after an auto theft suspect and he fled the car on foot into a nieghborhood. They had Eagle 6 up and there were several Dublin units looking thru houses and doing door to door searches for him. I guess he was also wanted on burglery charges also. any way they never found him and then one lady called back and said he was walking down the creek that borders Village Pkwy.Well they got back there and got Eagle back up again, and started to look again, to no avail. He got away again. as far as I've heard he was never caught.. P.S. Sorry for the long post.(This wil prob get to the site sometime tonight)(LOL)It's 9:15 A.M. Fri the 19th.

I'm not doubting you Robert but encrypting everything costs quite a
lot of money due to the added infrastructure for full-time encryption.
You come close to doubling the system price to encrypt everything. And
a lot of the time Chiefs don't know what they're talking about or only
repeat Moto sales people (who are terrific at miscommunication).

Using encryption for special purposes is another thing and doesn't
cost quite as much. (SF for example)

Doing a search I can't find anything substantial about encryption and
digital only operation, but I guess we'll see eventually.

10662. Re: [bayscan] Tiburon encryption

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-20 16:16:55 UTC
From: Tim XXXXXXXXXXXX
Topic: 10662 Message: 10662

I wonder if this is a case of people (the media, and even people within the PD!) confusing 'encoding' with 'encryption?' If they're going to have a digital system, the analog speech is encoded into a digital modulation scheme, but it may or may not actually be encrypted to protect it from unauthorized interception.

To the ignorant masses (including the media, and unfortunately, even police, city council, etc.), there is no difference. I don't know about out there, but in my part of the country (I'm in Michigan, moving to the SF Bay area soon!), plenty of public safety agencies used to think that the 'Private Line' setting of their Motorola radios meant that the channel was secure from eavesdroppers!

As others have mentioned, the encryption option is quite a large additional chunk of $$ for each radio, and most responsible city councils will reject it (often they're already in shock over the basic price tag for the new comms system). What some sneaky consultants & LEAs do though is just kind of include the cost of encryption right from the beginning, instead of indication that encryption is actually just an option. The people who have the financial strings (city council) don't necessarily know that the system expense could be dropped 15% or so by not acquiring the crypto stuff.

By all means, if anyone is concerned about such expenditures in their community, contact the city council, get them to share info on the proposed system with you, and then share your comments about it.

I am not so sure that media doesn't know the difference remember, its scanners where they get a lot of information for their stories. Its the media that screams loudest over this and screams to congress about "secret" police frequencys. If it weren't for the media, I would doubt scanners would still be legal.

I found an old antenna for 800Mhz analog cell phones. It's like a rubber duck molded into the end of a 2' whip. A quick to Radio Shack to buy a TNC/BNC adaptor, and I plugged it onto my scanner. MAN, what an improvement when monitoring LP's trunked 860Mhz system! I can even monitor thru the dead spot on North Mines Road at 1rst Street now, where even the LP firemen and LPD cops complain of poor signal.

Reception on CHP freqs is nonexistent, OTOH. Or anywhere else for that matter. ;=)

A peaceful demonstration involving 10,000 participants in San Francisco is creating traffic gridlock within a 8 block radius of City Hall. Van Ness Avenue and Polk Streets are completely blocked from McAllister to Hayes Street and gridlocked in either direction. The Fell Street off ramp was closed by the California Highway Patrol earlier but is being reopened.

Motorists are asked to avoid the area until later this afternoon.

Update, This started about 1840 , Santa Clara requested a CODE 30.
Major disturbance, one person "possibly" shot(unconfirmed). Still in progress. SJPD sent 40 Officers and Air 2. Santa Clara Sheriffs, Sunnyvale and The CHP also sent numerous Officers. The situation still in progress.
This started during a rap concert.
Santa Clara Police TG 16 and 48
San Jose Police 460.15 (code 33 for this incident)
CHP 42.50
Sunnyvale DPS , STAR team 483.1625
Air Two has been downlinking their camera to a video monitor in one of the mobile units.
KNTV Channel 3 was there, should have some video tonight.

Talk about a communications problem!

Here we have 5 different agencies operating on 5 different frequency bands

CHP.............. 42 MHz
Santa Clara SO....150 MHz
San Jose PD.......460 MHz
Sunnyvale DPS.....482 MHz
Santa Clara PD....800 MHz

How did these people communicate with each other?

I know that Santa Clara City has a TG patched to MACS (482.3375 MHz) so they can talk to Sunnyvale. Anyone hear any other patches?

I remember some months ago discussion in this group that San Jose was purchasing some neat new piece of equipment to aleviate this problem. Was it working?

I heard the transmission on 156.21 to report with gas masks and riot gear, and some talk aboot where to stage, and where to report and so on, then some time thereafter, a call shifting traffic to SC Tac 4, (154.65) which I could not hear.

You bring up a good point. The San Jose and Santa Clara ranking officers were together at the San Jose mobile unit that was receiving the downlink from Air 2. But again, your exactly right. You would think they would have gone to a mutual aid FREQ like 460.025 or 154.92 ? Didn't seem to actually hurt comms that bad in this situation. However, had it been a full blown riot, it may have been a different story

My problem was I ran out of scanners LOL. Heck, I took 3 with me and that still didn't give me enough. Although I certainly couldn't really understand 5 of them at once , 3 was enough I monitored SC of course on TGs 16 and 48 (scanning them only) , Sunnyvale on their TAC channel 483.1625 for their STAR team, and San Jose who used channel 1 for most of the time (460.15) finally switching to channel 11 , 460.05..... Had this event been in San Mateo County, NO problem everybody goes to the Green (not sure if the CHP has it, although H30 does)

10689. SF Question?

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-22 02:36:14 UTC
From: mikesrvca
Topic: 10689 Message: 10689

I finally programmed in SF's type II system, and was monitoring the PD dispatch channels, and I noticed that I was missing some transmissions. On certain calls, I heard the dispatcher acknowledging certain units, but I couldn't hear the unit side of the transmission. This only happened with certain transmissions. Did I do something wrong?

I've unfortunately never riden on a tiller, but I've done my share of rides on an engine. And man, those guys hit every red light. And man, that was some nice driving.

Topic: 10691 Message: 10693

Interesting article - looks more like a paid commercial for reach than an article, but provides some insight into the air-medical field.

There's one paragraph I don't quite get: "REACH has shifted its flight path to go over a more commercial area, and after 10 p.m. copters land and take off within 30 minutes, even if the medical crew has to hop a taxi back to "base" at the airport." I can understand not wanting to disturb the residents after 2200, but at what expense? If the pilot flies back to quarters, and the crew is at the hospital, they'll be seriously delayed if a call comes in - either the FN's have to taxi back to base, or the pilot has to fly to the hospital and pick up the crew - this can add an easy 10-15 minutes to their response, and can make the difference between life and death.

Comments anyone?

10699. Apology

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-22 15:27:25 UTC
From: John Drake
Topic: 4094 Message: 10699

After reading the message I sent it seemed to me to read more like an accusation than a question. Somehow the message was truncated and should have included the following: Any information on Sunnyvale's "STAR" team would be appreciated. Is it just another name for their SWAT Team or something completely different? Also "STAR" looks like an acronym, anyone know what it stands for? (I bet the S stands for Sunnyvale ;))?
My apologies to Ed if there is an misunderstanding concerning my previous message. (I think I hit the send button instead of the spell check. The evil "Send" button has since been severely punished and relegated to solitary).

John

10700. Police Chase Man Around Bay Area

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-22 16:43:40 UTC
From: robert sanford
Topic: 10700 Message: 10700

I don't know who else caught this one but I heard and recorded the whole chase. I uploaded the communications from the CHP Blue frequency to my site. The total playing time is about 32 minutes but the chase actually went on for 90 minutes!!!
Its hard to believe that this guy was able to go so far at speeds of over 100 mph without crashing. Hell its hard enough driving around the Bay area normally :) without the CHP, SFPD and H-30 chasing you. H-30 had to refuel at one point but it went on so long they re-fueled and got back into the chase. I have some of the chase in SF also but will upload that part later. This guy missed more spike strips then I could count. Good driving on his part but in the end as it always happens the bad guy looses and got caught. The audio of the chase is 3.5 megs for people with dial up it will take some time before it downloads and starts to play.

Its the top link on my page at:

http://bayscan1.50megs.com/

SAN FRANCISCO (AP) -- A man avoiding a traffic stop led CHP officers on a chase around the Bay Area at speeds as high as 110 miles per hour this morning.

The chase started around 12:40 am in Sunnyvale, went up to San Francisco, then back through Daly City and San Jose, and finally over to San Ramon.

CHP officers bumped the fleeing car and stopped it around 2:15 this morning.

The unidentified man was then arrested. No word yet on why he fled the traffic stop for speeding.

No one was hurt in the early morning chase.

This info is coming over local Channel 2 from Oakland. The explosion occurred at 1000 HRS at an apartment house about a mile from UCB at 2601 Milvia Street cross of Parker Street. Workers were using diesel fuel to lubricate forms they were placing in a basement and, according to BFD, a drill managed to ignite a drum of diesel fuel. Three were taken to closest local hospital which has the area burn center. 1 has been released; 2, one of whom has burns over 25% of his body, are still hospitalized.

BFD says that if there had not been a temporary wood patch on basement window severe injuries would have occurred to people in adjoining yard. I did not catch anything about a fourth injury but guess that could have been minor to a yard occupant. Tenants have been evacuated pending Building Inspector and structural engineer inspection.

This has nothing to do with UCB other than, I am speculating, the possibility that UCB students lived in this apartment building. And BFD has declared it an accident.

I figured since this was in my locale I would follow up.

I deleleted the orginal message which came from CBS News.

I have been looking for more as I suspected it was associated with University of California at Berkley.
The only thing I have noticed so far are that all but one of the UCB live cams are off line right now.

Why?

Vic

you are right to a point,,, what was asked was why somebody could not hear the mobile unit but could hear Dispatch and sometimes the COMM center will broadcast on both..(I can hear the Bleed over I live across the park from the 911 dispatch center on Turk St. and I live within 4 blocks of Northern Station and Fire Station # 5)
But yes you are right about two ID's and I think that PD.odd a number for the 29's and they call the even number (old PIC's zones.) dispatch.
again my .02 cents worth

Yes they usually put it on for a long distance chase. I guess they get
better coverage with it since its on top of Mount Diablo.

10724. San Jose 5th alarm

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-23 01:42:01 UTC
From: goldwinger16
Topic: 10724 Message: 10724

well guys, I kinda missed this one. But its still in progress
San Jose working a 5th alarm which started around 1630-1700.
Foxdale Loop near Capitol Expressway. Both KTVU and KRON had footage
Showed at least 3 ladder Pipes and 2 stag guns in operation , large
fully involved warehouse. Total defensive operation. Has Mutual Aid
from Milpitas Engines 1 and 4 and Battalion 19. Santa Clara City
Truck 7 . Sunnyvale Rescue 2. Capitol Expressway completely shut
down in both directions . big traffic jam. I have not heard a
containment or control yet. Just saw live footage, looks like they
will be pouring water on this one for awhile
San Jose Fire Dispatch 154.01
Command 3 154.115 (Foxdale I.C.)
also try TAC 5 (155.58) if your close by.

Ed

I happen to be driving home from Las Vegas today and saw some of the Team Vehicles on the I-15 South Bound. They were personal cars with Team Names and Numbers painted on them. I didn't see and LAPD but others like San Diego Sheriff,Riverside PD, Cal State Parks, Barstow PD and others. Those guys drive crazy!! They were pushing 85-95 MPH and I was doing 85 just to stay outa their way!

Nope, that's the usual speeds out there... It's long, and flat, and
everyone wants to get from one end (LA) to the other (Vegas) by
yesterday...

Topic: 10740 Message: 10741

Hey Jordan,
No the incident that happened in Martinez wouldn't be on Richmond's system. That would be Martinez PD 460.475 and Con-Fire 46.320.
Richmond and San Pablo talkgroups as I have them are as follows:
273 Richmond PD dispatch
274 RPD secondary/records
289 San Pablo PD/El Cerrito PD dispatch
305 Pinole//Hearcules PD dispatch
306 Pinole/Hercules tac
021 Contra Costa College PD
337 School District Police
358-365 RPD tac channels
529 Richmond Fire Dept dispatch
530-536 Richmond Fire tac
001 Con-Fire/patched to San Pablo Fire

Well I hope this helps a little, by the way I didn't hear our local sirens go off so what happend in Martinez had no effect here in Richmond.

Les

Most of the activity was on Contra Costa Sheriff P-2, which is 155.250, and Consolidated Fire Central, which is 160.110. They've since sounded the all-clear.

Hey Les... a few years ago Contra Costa re-alligned their law channels to a duplex system... 155.190 is now used as Patrol West, Orinda-Lafayette contract and Moraga PD. Here's some frequencies, but check out this website, http://www.scancal.org/ .....has a complete listing for our area... If you have trouble with Sheriff East, which I don't think you will now... plug in the simucast frequency listed below.
155.190 Sheriff P-1 (West, Orinda PD, Lafayette PD, Moraga PD, AC Transit contract)
155.250 Sheriff P-2 (Central, San Ramon PD, Danville PD)
155.310 Sheriff P-3 (East, Oakley PD, Pittsburg PD- simucast on 460.375)
155.040 Sheriff Tac-4 (car-to-car)
155.790 Sheriff Tac-2 (car-to-car)

Also keep in mind that it may be about four years before you see
public safety in the band since HDTV hasn't taken off like the FCC
thought it would (The 700 MHz band is currently occupied by broadcast
television).

It may be more than just rumor. Freqencies have already been
allocated in Southern California and I would guess the same has been
done in Northern California.

Here's the 700 band plan for So Cal.

10762. What is Top Posting and Why is it bad?

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-24 07:10:53 UTC
From: Keith_jpa
Topic: 10762 Message: 10762

Why is Bottom-posting better than Top-posting
By Anton Smit and H.W. de Haan
Definitions:
Top-posting: Writing the message above the original text, when one replies to an email or a post in a newsgroup.
Bottom-posting: The opposite of top-posting. Now the new message is placed below the original text.

We are fanatic Usenet-readers. As a result we are often annoyed by people who keep top-posting. This is considered as not good 'Net etiquette'. The majority of Usenet-users prefer bottom-posting. Below you can find our arguments why bottom-posting is better than top-posting.
In addition to bottom-posting, it is customary to leave out non-relevant parts of the message with regard to the reply, and to put the reply directly beneath the quoted relevant parts.

Because it is proper Usenet Etiquette. Check out the following URL: http://www.faqs.org/rfcs/rfc1855.html . It is a little outdated but still has a lot of valid points. Let us quote something from this site:

If you are sending a reply to a message or a posting be sure you summarize the original at the top of the message, or include just enough text of the original to give a context. This will make sure readers understand when they start to read your response. Since NetNews, especially, is proliferated by distributing the postings from one host to another, it is possible to see a response to a message before seeing the original. Giving context helps everyone. But do not include the entire original!

We use a good news reader like Forte Agent. Good newsreaders like Agent put the signature by default at the end of the post, which is the Usenet convention. Microsoft Outlook Express however has some serious bugs. Let us quote someone we know:

"The day Microsoft makes something that doesn't suck is probably the day they start making vacuum cleaners." -Ernst Jan Plugge
We are programmers ourselves, and we know it is very easy to implement to put a signature at the end of the post instead of putting it directly above the post you are replying to and can not change the position. Forte Agent has as a feature that reply to a post it will remove the signature (recognizable by '-- ', note the extra space) and everything below it, so it will remove a part of the original message. This is good Usenet practice so Agent is not faulty. Outlook Express on the other hand is faulty, check this bugreport regarding the Usenet signature delimiter.

If you want to try Agent, you can get it here.

Top-posting makes posts incomprehensible. Firstly: In normal conversations, one does not answer to something that has not yet been said. So it is unclear to reply to the top, whilst the original message is at the bottom. Secondly: In western society a book is normally read from top to bottom. Top-posting forces one to stray from this convention: Reading some at the top, skipping to the bottom to read the question, and going back to the top to continue. This annoyance increases even more than linear with the number of top-posts in the message. If someone replies to a thread and you forgot what the thread was all about, or that thread was incomplete for some reasons, it will be quite tiresome to rapidly understand what the thread was all about, due to bad posting and irrelevant text which has not been removed.

To prevent hideously long posts with a minimal account of new text, it is good Usenet practice to remove the non-relevant parts and optionally summarize the relevant parts of the original post, with regard to one's reply. Top-posting inevitably leads to long posts, because most top-posters leave the original message intact. All these long posts not only clutter up discussions, but they also clutter up the server space.

Top-posting makes it hard for bottom-posters to reply to the relevant parts: it not possible to answer within the original message. Bottom-posting does not make top-posting any harder.

Some people will argue that quoting looks bad due line wrapping. This can simply be dealt with by dropping Outlook Express as a start, and using only linewidths of 65 - 70 characters. Otherwise one has do it manually, and that can be tiresome.

A reason given by stubborn top-posters: they don't like to scroll to read the new message. We like to disagree here, because we always have to scroll down to see the original message and after that to scroll back up, just to see to what they are replying to. As a result you have to scroll twice as much when reading a top-poster's message. As a counterargument they say (believe us they do): "You can check the previous message in the discussion". This is even more tiresome than scrolling and with the unreliable nature of Usenet (and even email is inevitably unreliable), the previous message in the discussion can be simply unavailable.

Some newsgroups have strict conventions concerning posting in their charter. As an example we can tell you that in most Dutch newsgroups, you will be warned, killfiled or maybe even flamed, if you fail to follow Usenet conventions or if you do not quote according to the quoting guidelines. In general: it is better to practice the guidelines, if one does not want to get flamed in a newsgroup one just subscribed to.
If you can read Dutch, then feel free to check this site on the quoting guidelines. Too bad this page isn't in English.

We can conclude that there are no good reasons we know of for top-posting. The most top-posts originate from the minimal work people spend on making posts. We think that one should be proud of one's post, that is it contains relevant content, well-formed sentences and no irrelevant 'bullsh*t', before uploading to your newsserver. If the majority of the group will adhere to this convention, the group will be nicer, tidier and easier to read.

As a final remark we want to bring non-quoting into mind. This means that the original content of an email or Usenet post is completely removed. It makes it very hard for a reader to find out to what and whom one is replying. This phenomenon can be partly attributed to wrong settings of news- and email-clients, and partly to people who want to start with clean replies.

Special thanks goes to Peter Knutsen for giving constructive feedback

From: freqofnature
Topic: 10762 Message: 10763

Personally I prefer "top-posting" because...
1. I don't have to scroll through the text that I've already read
from previous posts.
2. When I receive these messages on my cell phone, specifically the
in-progress group, only the first few lines at the TOP of the post is
sent to the phone.

Reading from bottom to top is unnatural, hundreds of people
on the mail list must do this to understand what you are writing about.
Just because you read a article doesn't mean another person has. E-mail
does get lost and or delayed due to errors. You are also forgetting the
hundreds
of people that read your messages at the web site.

> 2. When I receive these messages on my cell phone, specifically the
> in-progress group, only the first few lines at the TOP of the post is
> sent to the phone.

For a mail list like in-progress that has a certain function then that would
make sense.
Why should someone at the Yahoo web site have to back track to
find out what you are writing about? Do you put the answer you to your topics
at the top of your personal web page? You don't list the Ventura frequencies
at the
top of the web page and at the bottom of the web page put a link to the top of
the page.

I wouldn't mind some top posters, but often they write one or two sentences
and
include everything they are responding too. Sometimes it is so unclear as to
what they are referring to you wonder what topic in the many paragraphs they
have
included they are discussing. It is fine to do this in private E-mail, but it
is
inconsiderate to the hundreds or thousands of people on a E-mail list.

Ditto that Tracy. I go as far as arguing that "Bottom-Posting" was only good when it came to the old days of Unix shell accounts, and the programs Pine and Tin. Since Slip, and PPP are more and more common, there's really no need. Besides, I always look at the top of all list postings to see what's being said.

Obviously you're a Bottom-Posting supporter. But really, the section of the RFC you posted had more to do with Usenet (that's Newsgroups for those who may not know) than Mailing Lists.

Also, not to cause friction, but the subject was "Off-Topic", ie. had nothing to do with scanners. Obviously the posting you made was done because of your peeve. In following proper netiquette, you should have put "OT" or "Off Topic" at the beginning of the subject line so those who choose to automatically filter those kind of messages can do so.

Again, I'm not responding to cause problems. It's just a peeve of mine that when someone makes a posting of this nature, especially the very old battle of Top vs. Bottom posting, it compels me to respond.

Respectfully,
Scott Baldwin

I have been a usenet user for the last, oh, almost TEN YEARS, and can tell you that bottom posting on USENET is the norm. Since Email is ***NOT*** Usenet, and has a totally different flow than Usenet, top posting is more appropriate for general messages. I still do the comment insertion type of posting where it's appropriate, but never do I top post in usenet, and seldom do I bottom post in Email.

My pet peeve, people who can't edit out the quoted text from the
previous message (such as Yahoo advertisements). Hey Jeff....<booonk!>
And throw some carriage returns at the end of your reply, please!

I think bottom posting is better because it makes people trim their
quotations for what's really needed. I only top post when the thread
has been so badly quoted and becomes a mix of irrelevant and relevant
data.

My browser goes to the top for posting by default. I prefer to the top also because if it is something that I have no interest in, then the delete button gets pushed. I do not want to re-read something to get the reply. In usenet stuff, the messages do not come over fast like when there is a chase or such.

Just my nickles worth

Philip

10773. Bay Area *GRE SOFTWARE* data file for 2067/92 request

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-24 18:07:03 UTC
From: Tim XXXXXXXXXXXX
Topic: 10773 Message: 10773

I'm flying in to the Bay Area tomorrow to do some home-hunting, and was wondering if any kind soul with a PRO-2067 or PRO-92 **and that uses the GRE Scanner Data Manager software for it** can quickly email me a data file or two of Bay Area public safety/misc stuff?

I thought I had this covered, but at the last moment, I'm finding that it's not going to work because the person who trying to help out is using different software and it doesn't seem like I'm able to import the file he's patiently tried sending me numerous times...

I'm mostly interested in SF and San Mateo County public safety, but I'll take anything I can that might at least give me CHP, etc. Being new to the area, but having a long time comms & public safety background, it'll be interesting to listing to everything, until I get saturated & then start to focus on my local area stuff.

So, if you have any GRE Scanner Data Manager (it's made by Signal Intelligence in San Jose, and is the 92/2067 software you could get at Radio Shack) .spg data files for the Bay Area, PLEASE email the .spg files to me ASAP and/or post them to the files area!

Thanks,

Tim

I have an idea that I posted but never mentioned to
the group.
Why dont we all run either aol, msn, or yahoo pager
online so that when there is something very timely,
ie. a chase or such event we can send it to those who
are online?
If the idea sounds good we should just agree on one
instant messenging systems and then I can have
everyone e-mail me their ids so that I can create a
list to send to the group for those of us that are
interested in receiveing breaking news events.
How does that sound?

Who gives a f***?! This isn't Usenet, go back there if you want to promulgate Usenet etiquette.

We can't even get people to reply to the sender instead of the whole group, or to stop using all capitals, or to stay on topic. Let's work on the basics before we start bitching about what position the quoted message should be in.

Obligatory on-topic content: Did anyone else hear that 20 minute bank robbery chase in Frisco on Monday? Wow. From the Tenderloin to SOMA through the Mission up to the Western Addition, down Diamond Heights and finally ending in the Glen Park area. I was pretty lucky, I heard the whole thing, even the ICALLs between the leutenants before the chase began wondering if the car occupants met the suspect description. Then there was an "Oh, shit, they've seen me -- they're running!".

Replying to e-mails, newsgroups, et al. I learned hard the first time about using quotes when replying. If the posting is rather long, and I have points to make throughout more than one paragraph, sentence, et al, then I'll segment the original posting. So then its more like a mixed posting, rather than a top/bottom. I guess it's a matter of "old-school" vs. modern. Sometimes I'm just too lazy and will post wherever =)

The frequencies have been allotted in SoCal (the FCC has yet to approve the plan), and the first Northern CA Planning meeting will be May 16. [The NorCal region decided in 1999 to wait for the service rules to become more mature before going to the effort of planning (and then having to change).]

It will be 2006 * at the earliest * before these channels can be used in the major areas of California (although the channels can be used in the Highway 41 corridor between Fresno and SLO), and there is currently no type-accepted equipment to place on these channels.

Don
(who has a little to do with the NorCal efforts...)

Just heard Southwest 836 report to Oakland Center that they are receiving an ELT in 121.500. All communications, so far, heard on 134.150.

I can't hear the ELT from my location...anybody else in the area hearing anything?

Thanks!

Craig

That would be fine also with me I run 5 different ones here, I guess we
just need to agree for one for use on BayScan and then create a database
with every ones id's that wants to participate in it.

From: Brian Onn
Topic: 10715 Message: 10803

Instant messaging is not the right medium. The database of users quickly becomes hard to maintain, and even harder to use. The right medium is either the built in yahoo chat, some other chat, or IRC as Kenton A. Hoover said. I prefer IRC over the yahoo chat, actually. No Java client to download.

(I understand that ICQ has a group messaging capability, where the group members are kept at the ICQ servers. If we must use IM, than this approach is better than trying to maintain the list ourselves in a database).

>down

SF doesn't. SF Site 1 uses 866.2250 and 866.9625. I typically always
hear 9625 active as the CC.

Sac County has 868.5375 in rotation as a CC so I'm betting it's them.

It's all here:
http://www.trunkedradio.net/

I haven't tried Odigo out but I've been using Trillian with positive
results. It's supports all the major IM networks and most of the
features each provides.

I agree with Kenton on using an IRC channel. You can see who's there immediately and everybody has IRC access without having to download software.

I used to use Odigo, but I think that Trillian has them beat.

From: caladded@aol.com
Topic: 10797 Message: 10808

Les, the Engine companies are start with 25 , then as follows
Stations 1-8 3rd digit is a 4
i.e. Station 1 = Engine 2541 Station 5 Engine 2545 etc
Station 10 has Engine 2550
beginning with Station 12 , 3rd digit is 5
Station 12 Engine 2552 etc
Station 20 has Engine 2560
and of course starting with Station 21, 3rd digit is 6
Engine 21 is 2561
Sorry, I don't have the Truck numbers but they do NOT usually meet with the same number as the Engine like San Francisco or San Jose (SF Engine 1 , Truck 1 same station,, SJFD Engine 29 Truck 29 same station etc)
i. e Engine 2541 (Engine 1) has a Truck with it, but not Truck 1.
Truck Companies 3rd digit is 7
I.e. Truck 2571 or 2577 etc.
As I monitor OFD, I will try to figure this one out (too much time on my hands :-)

These ELT are also sold to skiers,for those who like to ski in the back country ...
I would check with stores like REI and North Face and such
There are two types one that is hard wired in the craft or a small handheld unit,(transmits just a tone and some have strobe light on them)
Also Life rafts have the same type of transmitter in them that start working after getting wet or going in to the water....
Make it a little easier for the SAR folks to fine you....

From: Kenton A. Hoover
Topic: 10813 Message: 10818

Use of ELT (technically known as Class B EPIRB) devices by individuals is prohibited, except for Alaska, where a test project is running. Otherwise, EPIRB units are supposed to be attached to an aircraft, sea-going vessel or life raft.

The skier transmitters you see are for avalanche use, and don't run on 121.5, 203 or 406 MHz like EPIRB units do. Skier units usually run below broadcast AM; I think 457 kHz might be a standard, but I am not sure.

If you are going to spring for an EPIRB, spring for a 406 with or without GPS. The COSPAS/SARSAT packages for satellite detection will no longer have detection for 121.5 and 203 MHz, due to the high number of false alarms. 406 units run between $1-2K.

Last, usually when an ELT goes off, Center will announce it so that the airports check their local units in the towers. More than 90% of ELT activations are false alarms caused by hard landings and like.

Well the post I sent about something going on at 11:30 still has not shown up on the list so forget that post :(
I did just hear something about a fire on Treasure Island and that they were going to be moving certain things off the island over the Bay Bridge.
This just came over the CHP 42.440 freq at 12:55
I guess this post should make it by around 4:00 pm UGH

Anybody give me info on the types of trunking systems used by the
following agencies:

1-Oakland PD/FD;

2-SF PD/FD;

3-Alameda County Sheriff.

Somebody wants to give me a very good deal on a RD Pro-94. Any thoughts
on it?

73 DE TIM KG6IRH.

jes' being facetious (which is, BTW, the only word in the English language with the five vowels in their alphabetical order).

Those "ID" stops are always kinda hairy... the uniform is there all by himself so as not to attract attention or raise the suspect's suspicions... the tail cars try to get close enough to WATCH but not be observed.. if something goes sideways they need to be able to get there right NOW.

Harry, thanks for pointing out the fact about facetious. I agree with you about the hairiness of such a stop especially since CHP in this area and OPD are ususally one officer vehicles. The uniformed OPD unit which handles street controlled substance matters usually has two officers per vehicle but they all wear modified BDU's and most of the local dealers/dopers can recognize them without a problem. 73 DE TIM KG6IRH. Now if I could get ATT to get done with its $%^* rebuilding project so I could decent cable reception.

> My QTH is a a half-block south of 580 on Harrison. Hope they got
> one of my local crack dealers.

I rarely watch TV, but I was amused to happen to hear KTVU do a piece on how 47% (or somesuch) of the people in the Frisco city jail are in there for narcotics charges. I was amused because the city police have had several dozens of plainclothes officers on specific narcotics detail for the past couple of months. Nearly 24 hours a day these teams have been working to sweep the dealers (mostly corner dealers) off the streets in all the usual areas, and it's working. So now the news report spins it as if there are unusually harsh laws leading to the persecution/prosecution of lots of unwary, generally innocent people. That's innacurrate, the reason that the percentage is so high isn't because of new legislation, it's because of new enforcement.

And the whole thing is rather silly anyway. If you use percent as a measure, you're not really measuring a change in the prison population (unless you compare it to a previous percentage, which they didn't). I mean, if it's not 47% in for drugs, it'll be 47% in for drunkness, or assault, or something else. If there are 2 people in the city jail, and one's in for murder (pending arraignment), then 50% of the people in the city jail are in for murder, but that tells us nothing about the actual increase or decrease of the number of murderers. Yet, from the handling of that story, one would suppose that there has been a tremendous increase in the number of jailed murder suspects (or, in this case, narcotics suspects). Bah!

I agree we as the "public " cant have it both ways either uses your head in
posts
or someday everything will be encrypted! I can tell you all the heat Ive
gotten into just asking for ambulance unit numbers!!!
its a new world post 9/11 get used to it folks (we might live longer)
Ok off my soap box

I agree 100%. (I'm sure you all saw that coming, huh).However, with the slowness of yahoo groups e-mail, in the NASA group, I'm just now reading about the Apollo 10 mission, so I'm sure the DEA stop probably turned out to be Al Capone, or Bonnie & Clyde, somewhat delayed.

Not NOW maybe, but wihin a very few years EVERYONE will "care about digital." If folks thought TRUNKING was a major change in our hobby, they ain't seen nothing yet. Digital (or more precisely, closer channel spacing, which pretty much = digital modlation) will be affecting most every agency in the country.

Topic: 10864 Message: 10873

Brian,

I believe the Metro units are the traffic patrol cops. Usually logged
on as 9xxx, ... 9100, 9200 etc units.

MERGE is still MERGE, unless something has changed recently.

Metro division, I believe, is a relately new name and includes
MERGE, street crimes like gangs, graffiti, prostitution, etc.
I'm not sure if the metro units (traffic patrol) is part of the
Metro division or not.

10875. Frisco mobile 911

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-27 19:49:04 UTC
From: John Smith
Topic: 10875 Message: 10875

I overheard SFPD dispatch say that cellular 911 calls in The City are no longer CHP transfers but now (usually) go directly to SFPD dispatch. They apparently don't give caller location yet but it's a step in the right direction.

It's unclear, though, whether this is true for SF cellular numbers or SF cellular calls. If, as a SF cellular subscriber, 911 sends me to SFPD when I'm in East Palo Alto with an emergency, then this wouldn't be a step forward afterall. If, on the contrary, the cellular system is now coordinated enough to determine that the cellular 911 call coming from a Salinas subscriber is within City limits and forwards it to SFPD, then we're pretty close to actually determining caller location. Either way, it apparently doesn't give the calling number's id yet, and the dispatcher didn't seem especially happy about the change.

IIRC, with the scanner off. As with most devices, it will take much longer
to charge a battery if the device is on. I recall the 245's manual says so
in the front. I'll see if I can dig the manual up, but that's what I remember.

The cell sites located in the City will be sending their 9-1-1 calls
to the SF Answering Point. Nextel has been doing this for a couple
of months, and (IIRC) Verizon is now doing it. AT&T Wireless, Sprint,
and Cingular are still going to CHP GGCC.

I wasn't guessing, my info was the result of a lot of listening .....
Jeez ... you guys are brutal! Turns out I was close.
Next time, I'll just keep quiet and let you unfoulable know it alls
answer .... Jeez. Nothing like dampening a healthy exchange
of information.

ok code four was just now given 10pm half hour fight with cops wow dog tore up three drunks they will feel that in Morning one San benito sheriff in route to hospital drove himself?
medics on scene no fire needed sounds odd the Santa Clara buss will be full tonight

units responded from SALINAS, MONTEREY COUNTY SHERRIFFS,CHP SAID ENTIRE DIVISION WAS THERE, GILROY 6 UNITS SANTA CLARA WAS AT LEAST 6 ALL OF HOLLISTER AND SAN BENITO SHERRIFFS

JUST A SIDE NOTE I DO NOT NORMALLY POST ANY PD STUFF IM A FIRE BUFF SO IF ANY OF THIS INFO IS WRONG AS FAR AS BEING PC I AM SORRY BUT IT WAS HAPPENING SO FAST AND IT WAS HUGE!!!!!!!!!!

ILL POST MORE NEXT WEEK WHEN i READ THE REST OF THE STORY

May be a precautionary. We won't (officially) go on standby - we're pretty much on standby regardless (sitting in quarters waiting for the bells to go off - isn't that standby??) but at the request of an agency and at the pilots discretion, we may.

Ahh - CS2 is intubating patient, then enroute to SJ Med Center with a 5-6 minute ETA - @ 2221.

as far as location it was at a grange hall at shore road and Lovers lane
which is east north east of down out in the boonies
the one thing that I find intresting is the number of traffic stops all
concerned are making around area must have been fifty since about 945pm
some one checked lots of tags
Another funny thing was 35 juveniles on mopeds racing away from scene (
hell angels in training?)

ok Im done gotta sing in morning and need to rest night all by 11pm so this
will prob. be last post but will be in chat

If everyone could just run Scanner Recorder on their computers and run the output from their scanners to the sound card we could all enjoy this stuff if its out of range.
I would recommend that everyone download Scanner Recorder (Hey its free!!) at the following URL and just send the output from your scanner via any audio output to their sound cards. I can provide the web space to post anything good.

Yeap, I can confirm Sprint's 911 calls go to the Vallejo PSAP.

I was just poking arounf the island a Saturday evening. I didn't see the lights, but I do know they're filming part of 'The Incredible Hulk' movie there, and the former main gate for the USN installation is dressed up once again as an active military base gate 'Joint Forces Command West' or something like that, with a couple dozen military-type vehicles stored back behind one of the buildings used for a sound-stage.

As an aside, for those of you monitoring, Treasure Island law enforcement, crime (usually just property crimes) is increasing a lot due to the federal gov't operating some sort of Job Corps training facility (with dorms) in some of the former USN buildings, and importing in some 'undesireables' for that.

Anyone on this list using SouthBell or Concentric that has named their computer Awhcnki

I've been receiving the W32.Klez.gen.mm virus/worm on a pretty regular basis. Luckily my AV has caught it every time. I'm writing all lists as well as people I know, as it uses the Outlook address book to spread itself. So it's someone that either knows me and is unaware of the infection, or has a bone to pick with me. I'll opt for the first.

Just thought I'd shoot a word out. If you're using Southbell or Concentric as your IP and don't have a virus scanner, or your scanner is out dated, it's suggested you either get one, or update the old one, then scan your system. The relevant header of the infected e-mail for those curious is below.

Regards
Scott

The system tries to figure out if you're on the freeway or not. If you're on a freeway in SF, your call should go to CHP. Otherwise, it will go to SF ECD. I haven't had to use it yet -- I just call ECD directly with in-city calls, and I so far I've had no need to call CHP from within town.

"TI Law Enforcement" is just SFPD. They keep two patrol cars out on the Island, and there is a 'substation' of Southern at the main admin building. SFPD's Marine unit is also based on TI. SFFD has Station 48 out there, which is a truck, engine, hose tender and a 'command car'.

Just a reminder to Bayscan members that virii can not be transmitted in text email and Bayscan has both HTML and attachments prevented, so this list is safe. Files on the Bayscan website may be a different matter.

(In non-list email you should consider disabling HTML and disabling automatic attachment opening. If someone does send you an attachment, consider it before you manually open it even if it comes from a friend's address.)

It is true that this list is safe, due to attachments being turned
off. And your observation of the files section is true as well. However,
some people do put the e-mail addresses of people from lists into their
address book, if they frequently write to one another about off-topic or
even more-detailed material. A user from another list that also disables
attachments had added me to his address book. Because of that, and the
fact he had become infected, his system unknowingly sent me the virus. But
I was not infected because of my AV program.

On a side note: Anyone who goes on the internet with a computer, and does
not run an AV program puts themselves at risk every time, regardless as to
how safe something appears to be.

10927. Opening Day on the Bay

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-28 16:37:11 UTC
From: robert sanford
Topic: 10927 Message: 10927

Today is opening day on the bay. That means there are going to be MANY
drunk people out on their boats and usually creates some extra work for
both the Coast Guard and the local police in towns like Tiburon and Sausalito.
Tiburon particularly gets nuts and it can be fun to listen to.
Tiburon, Mill Valley and Sausalito all use the same frequency of 39.800
I thought I would post the standard Marine Frequencies for those of you who
might not have it handy also:

157.050 and 157.100 should be the best ones to monitor.

U.S. VHF Marine Radio Channels and Frequencies

Channel Ship Ship Use
Number Transmit Receive

01A 156.050 156.050 Port Operations and Commercial.
VTS in selected areas.
05A 156.250 156.250 Port Operations. VTS in Seattle
06 156.300 156.300 Intership Safety
07A 156.350 156.350 Commercial
08 156.400 156.400 Commercial (Intership only)
09 156.450 156.450 Boater Calling. Commercial and
Non-Commercial.
10 156.500 156.500 Commercial
11 156.550 156.550 Commercial. VTS in selected areas.
12 156.600 156.600 Port Operations. VTS in selected
areas.
13 156.650 156.650 Intership Navigation Safety
(Bridge-to-bridge). Ships >20m
length maintain a listening watch
on this channel in US waters.
14 156.700 156.700 Port Operations. VTS in selected
areas.
15 -- 156.750 Environmental (Receive only). Used
by Class C EPIRBs.
16 156.800 156.800 International Distress, Safety and
Calling. Ships required to carry
radio, USCG, and most coast
stations maintain a listening watch
on this channel.
17 156.850 156.850 State Control
18A 156.900 156.900 Commercial

Operator)
85 157.275 161.875 Public Correspondence (Marine
Operator)
86 157.325 161.925 Public Correspondence (Marine
Operator)
87 157.375 161.975 Public Correspondence (Marine
Operator)
88 157.425 162.025 Public Correspondence in selected
areas only.

88A 157.425 157.425 Commercial, Intership only.

NOAA Weather Radio Frequencies

WX1 -- 162.550
WX2 -- 162.400
WX3 -- 162.475
WX4 -- 162.425
WX5 -- 162.450

WX6 -- 162.500
WX7 -- 162.525

Frequencies are in MHz. Modulation is 16KF3E or 16KG3E.

Note that the letter "A" indicates simplex use of an international duplex channel, and that operations are different than international operations on that channel. Some VHF transceivers are equipped with an "International - U.S." switch for that purpose. "A" channels are generally only used in the United States, and use is normally not recognized or allowed outside the U.S.

Boaters should normally use channels listed as Non-Commercial. Channel 16 is used for calling other stations or for distress alerting. Channel 13 should be used to contact a ship when there is danger of collision. All ships of length 20m or greater are required to guard VHF channel 13, in addition to VHF channel 16, when operating within U.S. territorial waters. Users may be fined by the FCC for improper use of these channels.

See the Federal Communications Commission's Marine VHF Radio Channels page. This page does not include frequency information, but has more complete information on the use of the channels. If you notice any discrepancy between these two lists, please notify us at cgcomms@....

Ben,

http://www3.sympatico.ca/alain.lafleche/download.html

This is a free program for the BC-245 and is pretty darn good. You can download what's in your scanner to the program, edit text tags, channel and freq info then upload it back to the scanner. It's also a fully functional remote program.

Yep. Text Tags. Here's the catch: You have to be running the remote program. You can add text tags to every freq and each bank, and even though the scanner itself will not display these, the program will. They have it set up so you can watch ID tags of trunk systems as well.

Not as good as the Pro-9x tagging because you can't bring your big ol computer with you. But if you're sitting at home, connect the thing to a com: port and away you go =)

The link I posted for the BC245int program is the program writers home page. However he has the older (MUCH older) version there.

ftp://q2.herzig.net/pub/bc245/

This link is for the newest version.

1) Download the program " 245Setup.exe "
2) Download the upgrade file " BC245INT-243.zip "
3) Execute and install " 245Setup.exe "
4) Extract the update file to the install directory where BC245 is installed.

You also have to go into the directory, rename the exe file (maybe add ".OLD" then rename the update file to BC245int.exe and you're all set.

The question should be, what's the point of using a remote control program for any scanner. Before the coming of the most recent scanners that have text display, they had these programs. If you're looking to get text tags without the use of a computer to read it, then you will need to buy a Pro-92 or similar scanner with that feature.

The program just makes it easy for those who still use the 245. I keep mine running right along the side of my Pro-92.

While I, for the most part agree with Ben, I see Scotts' point too. I rarely use my software for the 780s unless I am programming them. What I like is to have banks set up for vacations (i.e., Los Angeles, Reno) that I don't normally run in the scanner. Makes in easy, beats the heck out of doing it the old fashioned way, by hand. Still, if I was new to an area, or had someone over to listen, having the text tags in the software makes sense.

Speaking of "small ol" computers you _can_ bring with you, anyone have
any experience with a remoting program for a -245 that runs on a
PocketPC? That might be a nice complement.

For SFPD they use A1 or A2. For SFFD, its in Battalion 3s area (and Division 1) so it would be A1 for dispatch, A4 for a greater alarm
and TAC 13 for Fireground operations. BTW, they have a fire academy on T. I. very close to Station 48 . Some of the local FDs, starting with the SFFD want to see a regional fire academy there, they sure got the room for it. lots of open space, and lots of old navy abandoned buildings.

10963. Re: scanner directories

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-29 01:30:20 UTC
From: marnells@snowcrest.net
Topic: 10963 Message: 10963

In California we're fortunate to have at least two terrific directories. Gene Hughes, editor of the nationwide "Police Call" directories actually started in 1964 with a Southern California directory, < http://www.snowcrest.net/marnells/pc1964.htm >which was his sole product for several years before hr hooked up with George Switlik and thet went nationwide. Well beyond what "normal" folks would call quitting time, he continues to publish the "Southern California Detail Edition," which is a much more detailed localized directory for the counties of So Cal. The other is Bob Kelty's "Government Radio Systems" series... it has tones, input/output freqs, channel names... just about everything a scanner buff - or professional - could want. About 10 years ago it was one huge book, but he now has the state divided up into eight or so areas to make it more manageable. It's available in printed form OR on disk... the disk is neat because they're more or less made to order, so always contain the latest updates. That and you can go in yourself whenever necessary and update your own copy... it's in WORD or WP format (I forget which). The area sections contain local Federal, State & Military freq info, but he also publishes editions specifically covering State of California, Federal, Military and also a smaller-scale "Industrial" edition... with lots of business freqs, malls, etc. Both gentlemens' publications are "must haves" if you listen in the respective areas. I know there have been - and possibly still are other very good ones, but these are the ones I rely on. Harry http://www.snowcrest.net/marnells/click.htm <~~ North Hollywood shootout audio & video files Hello Folks: I'm wondering if there's any other frequency guides available other than what I've listed below for regions/states/etc within the U.S.: Within the Northeast US here's what's availabe for Frequency Guides for Scannerists (and most are in my library along with some others related to my "travels"): 1. Hollins Radio Data/ & Distributed by Radio Shack nationwide: "Police Call Frequency Guide" Volume 1, book (CT, ME, MA, NH, NY, RI, VT) (407 pages), & CD ROM, yearly Does anyone have any other frequency directories to add to the list? 10970. Re: Pursuit & DOA & CAD & stuff

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-29 09:09:07 UTC
From: marnells@snowcrest.net
Topic: 10970 Message: 10970

But LINDA, don't you understand???? You're not ALLOWED to filter what we the people read on your website. We're taxpayers and we pay your salary and we have the constitutional right to know every single thing you do. You people MUST have something insidious or communistic or illegal or immoral to hide if you don't let us see and hear every message, and we're going to file a crass-action lawsuit demanding webcams in every police vehicle and every office of every public agency in the world. And no 700 MHz or digital or trunking, either. CHP must stay on VHF low band or else you have the obligation to provide all current CHP scanner-listeners with new scanners if you go to a new system. (I just KNOW somebody out there is thinking it, so I figgered I'd beat em to the paunch.) Harry http://www.snowcrest.net/marnells/kma367.htm <~~~ Reveals the awful truths about LAPD communications Oh, and PS... since we pays your wages you HAVE TO put up with everyone's stupid questions. Happily. It's your first amendment right to listen. (geez what's IN my coffee anyway??) At 06:25 04/29/2002 +0000, somebody wrote: >Didn't find anything on CHP Cad about this, Did hear that LACoFD >Copter 11 was cancelled, Anyone know if the suspect survived? DOA. Also, you wouldn't ever find anything on CHP CAD for pursuits - they are blocked from media and public view. Occasionally, the dispatchers create "media" logs to give brief information about "police activity" and traffic hazards created by same..... but traffic stops, pursuits, arrests, a variety of other criminal and confidential situations are never displayed on the CAD TIP page at http://cad.chp.ca.gov (http://cad.chp.ca.gov/) The CHP CAD TIP page on the Internet is SOLELY for public awareness of traffic information. Confidential incidents are blocked from public view, automatically, by screening software. I think it's a darned slick system! Even the CAD logs that ARE displayed are heavily edited, in case you hadn't noticed. Dispatchers can over-ride the automatic "blocking" software to make information visible on the 'Net, and can also block lines that slipped through the screening software. It explains why you see practically no change in information for very long times - all the stuff that's been happening behind the scenes is actually KEPT "out of view" - it's not that NOTHING has occurred on those incidents that have sat, apparently without updates, for long periods of time. Y'all just don't get to see it. ----- Original Message ----- From: "Linda Olmstead" <gryeyes@...> To: <in-progress@yahoogroups.com> Sent: Monday, April 29, 2002 01:02 Subject: Re: >IN-PROGRESS>> CHP cad > At 00:13 04/29/2002 -0700, Karl D. wrote: > >last year I was able to get some pursuit information by searching "PUR" and > >"FTY"....it was very hit or miss...but someone blocked them out completely > >after that... > > SomeTHING, not someone. ;-) I am very surprised there were ANY search > results for such criteria - that's something the CAD wizards up in > Sacramento work very hard to prevent. Nope. A1 & A2, with SFPD Marine Unit on A11. You can also hear the SFPD Marine units working the CG on either 20 or 21 (I forget which). SFPD Marine Unit has three boats.

I shouldn't really bother with this thread, but I will. I really doubt my tax payer money makes a drop in the bucket of her salary (Maybe I pay for a cup of coffee or something similar). People always say, "my tax payer money this, my tax payer money that." Our individual tax dollars aren't really large enough to give us any control over anything. It's like owning one share of stock in a billion dollar company. This will be the last I have to say, if anyone wants to argue, due so privately. Thanks. The real feature the SFFD facility has is the old Navy engine room fire simulator system. This allows setting up full dress interior fires, with adjustable heat, flame, smoke and ventillation conditions. Other local FDs might want a regional fire academy there, but as the SFFD audit report from last year showed, they aren't willing to pay the costs involved to use it. If I recall correctly, the facility costs about $1M/year just to operate (not including lease costs for the buildings), but so far has only garnered about $27K in usage fees from agencies becides SFFD.

US government policy on base closures requires that buildings be leased at market rates. Thus, when SFPD was thinking of moving their academy facility from Diamond Heights (and thus making some money on the local real estate market by selling the old land), it turned out that a new facility on TI would have cost them almost a million dollars a year to lease. So much for that plan.

She's a supervisor at CHP Monterey Dispatch center.

ALSO, but unrelated, A Los Angeles County sheriff's deputy is in
critical condition after
being shot in the chest Monday while pulling over a stolen vehicle
suspect in Irwindale.

Paramedics administered CPR to the deputy on the scene of the shooting
in the 200 block of Live Oak Avenue about 10:45 a.m., said county fire
Inspector Mike Brown.

"He is in "extremely critical condition." One poss suspect in custody,

Sure... you are probably losing more signal in the 30-50 feet of coax and the connectors than you're gaining with the height. The higher the frequency the more noticeable it's going to be. With the little rubber ducky, the signal only has one physical connector (the BNC) and maybe an inch or so of circuitry to travel thru.

VHF isn't going to care that much, but up into UHF & 800-900 MHz the loss can be significant

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-30 01:13:42 UTC
From: Harry Marnell
Topic: 10965 Message: 10984

And of course as soon a i sent the previous, I found a page with a simple explanation & chart, at
http://www.webdeals.net/coax.htm

What coax are you using, Ben?

> that plan.

Now I'm confused.

I work in a nice brand new building on land that my employer bought
from the County of Sacramento, who gained ownership of the former
Mather AFB. Another agency of my employer 'rents' from the County;
but they are leaving Mather in favor of McClellan as the County
now has a tenant (a major cargo hauler) who is willing to pay full
market rate for flight line access.

My understanding (from all of the media hype of Da Mayor at the time)
is that CCSF was passed title of TI. So why would CCSF departments
have to lease from CCSF - other than to fund the infrastructure
improvements needed to bring the facility up to code?

Don
State guy

[Non-text portions of this message have been removed]

10988. Air Force One in Bay Area Wednesday

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-30 03:05:56 UTC
From: bluebag
Topic: 10988 Message: 10988

Bush will be in the South Bay Wednesday, according to news reports.
Listen for him on Oakland Center freq 127.45, Bay Appproach 120.1,
and the usual Secret Service freqs. He'll probably fly into
Moffett. I don't know when, but probably late morning. Here is a
paragraph from today's SF Chron:

Bush to speak in South Central and Silicon Valley
Riots' remembrance, fund raising are goals
Carla Marinucci, Chronicle Political Writer

Tomorrow, Bush will give what the White House promises will be a
reflective
address on his political philosophy -- and economic agenda -- to
members of
both the Churchill Club and Commonwealth Club of California; it will
be held
at the Tech Museum of Innovation in San jose.

--Dave

From: Kenton A. Hoover
Topic: 10945 Message: 10991

C&CSF has not been given title yet. This is because of the potentitial liability associated with toxic cleanup costs. Once a local government accepts title, they cannot pass back these to the federal government. Sometimes, the government can create an MOU that addresses this, but the Federal government won't accept open-ended arrangements -- problems that need mitigation be identified before the transfer occurs.

In the case of San Francisco, this is part of why Hunters Point is still Navy property. Hunters Point is also a little strange -- turnover started before the current policy was in force.

C&CSF was given effective control of TI. However, it is still on the books as as US Naval Installation and it still has a Naval officer who is in "Command" of the island. As the Navy still holds it, they control use of the land on the island and the rules about use of the land on the island are still Federal, not local. At some point, it will become part of C&CSF. However, I presume that will not happen until the Hunters Point Shipyard is cleaned up.

10992. Re: >IN-PROGRESS>> LASO Incident Size up

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-30 04:01:01 UTC
From: Harry Marnell
Topic: 10992 Message: 10992

Thanks..

1) Does this mean that earlier reports of the shooter being in custody have now been changed? I THOUGHT that came from a Sheriff's spokesperson, but either it didn't, or it turned out to be the wrong guy

and

2) It sounds - and has sounded all day - like the deputy knew the vehicle was stolen BEFORE he stopped it. Did he knowingly stop a stolen car with multiple suspects in it all by himself? If so, I guess we'll never know why...

Harry

Size up of what happend
Shortly after 10:30 this morning LASO Deputy David March pulled over
a suspected stolen vehicle at Longden and Live Oak in Irwindale,
There was confrontation and Deputy March was fatailty wounded
The suspects fled, Deputy March was taken by ground ambulance to
Huntington Memrorial

Suspects are Male Hispanics between 5'6 and 5'7, In there early 20's
LASO locates the suspects at an apartment complex on Huntington on
Duarte, A permiter is set up a portion of Huntington is closed down
LASO Swat does a search detains several possible suspects
It is announced that Deputy March had died and the suspects are now
wanted for Murder
After extensive search UTL on suspects

Face it. Hunters Point has always been 'a little strange.' And with
some of the hazmats there, always will be. :)

Yeah? I've always heard 121.3 as the Bay TRACON approach to NUQ; and I would think that ZOA would be on 119.475 (sector 24) ... has this changed? Anyone have an updated sector map? The last one I found didn't have 120.9 for TRACON.

But now that I got a new antenna up and can actually hear down there, I'm ready to learn something new! :)

It is true that one suspect is in custody, but another suspect remained at large as of yesterday afternoon, and the suspect vehicle. Golden Gate carried an Officer Safety advisory on Blue and Aqua that named the vehicle and suspect description (hispanic male adult is all they had so far).

May the cop killer rot in hell.

>One of the suspects in the 187 of the L.A.Deputy has been taking in custody on a freeway near Dodger Stadium. Showed live on Fox News Channel , about 5 minutes ago.

>LASO just broadcast, at 13:48 PST a 187 (Murder) want /armed & dangerous on the vehicle involved in the murder of the deputy; veh is a Black Nissan Maxima, license 4BCZ512 / CA

296.7 is one of the nationwide "ultra high altitude" (FL330 and above?)
frequencies serving Oakland Center (ZOA), and PINION is a U-2 from Beale
(9RW is the unit -- http://www.beale.af.mil/units/rw/). I had heard
they were mostly deployed at this point, but various PINION aircraft
have been busy almost every day for the past week or two. It's fun to
hear them get cleared to "VFR on top" meaning above FL600 (60,000') --
that's unrestricted airspace up there.

243.0 is the military GUARD frequency, similar to the 121.5 for emergencies; if they were hearing an ELT on 243, it could have meant there was trouble. But something like 95% of ELT activations are false alarms. Did you hear any more about it?

BTW, I normally just hear ZOA controllers (I'm basically above UCB) on 296.7 giving clearances for 9RW aircraft from the CHINA MOA (reporting point HOLLI[*]) into Beale, but I just now heard both 94 and 95 checking in, so either conditions are better today, or they are closer to the Bay Area.

Topic: 11010 Message: 11025

> is there a corresponding VHF freq to the 296.7?

I have two answers: no, and I don't know :-)

"No" because the UHF ATC frequencies don't get simulcast; military aircraft that are UHF-only report in on the UHF frequency, and ATC responds on both. 296.7 (as opposed to other UHF ATC frequencies I've heard) seems to simulcast _only_ when it's in use: it's quiet for long periods of time, but if they are guiding a U-2 down to Beale, you can also hear the rest of the interaction that controller has with > FL330 aircraft in the sector. Once the UHF-only aircraft gets handed off somewhere, they stop simulcasting and it goes quiet again.

"I don't know" because I haven't seen very much published about this frequency, so I don't even know which site/sector it belongs to. It isn't listed in any of the lists I've seen. If anyone else knows, let me know!

I guess what I should try doing is monitoring the other ZOA/High frequencies when 296.7 is active and look for overlap :-)

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-01 04:18:23 UTC
From: Harry Marnell
Topic: 10970 Message: 11038

First, my post was a tongue-in-cheek response to a message sent out by a CHP Dispatch Suprevisor, which is available online at http://groups.yahoo.com/group/in-progress/message/4127 - the "in-progress" group's message archives are open to subscribers and non-subscribers alike.

Yes, it was intended to by satire, augmented by hyperbole. Most of the "comments" I made however, were taken quite literally from posts on various email groups over the past few months, whenever the so-called "right" to monitor police radio calls come up. I just boiled them all down into a few sentences, non sequiturs and all.

I'm personally not at all in favor of laws restricting scanning. I've been listening to police calls since the 1950s, and I believe such laws are generally wrong-headed, illogical, unenforceable and counter-productive. If someone with interferes with a public officer in the performance of his/her duties, they should be handled accordingly, regardless of whether they're carrying a scanner, a camera or a box of cereal. The interfering should be the offense, if any.

On the other hand, I neither agree with nor think it's a good idea to suggest that we have a god-given or constitutional right to listen. (Larry Gass not-withstanding) Get too carried away with that line of thinking and one could start down a slippery slope of trying to justify anything one does with information picked up on a scanner.

And indeed, on one of these lists, a couple people recently DID posit that if the police go to otherwise un-monitorable bands or modes, that they should be obligated to make receivers available to the media and public at cost... that is, become scanner dealers essentially. I never did understand the tortuous route they must have taken to reach that position!

Finally, let's step back a little and try to look somewhat dispassionately at scanning. If we think we're somehow "policing the police" or tracking our taxes by listening to them on the radio we're only fooling ourselves. LAPD, for instance, has about 12,000 employees, only a small fraction of whom are out on the radio. What do we generally hear on the radio? Where they're being sent and what the calling-party told the operator was going on. Not much else. Unless it's a real crime, then we hear what they looked like and which way they went . The officers may be out an hour or two, but the radio usually gives us absolutely no clue whatsoever as to what they're doing. Are they goofing off? Taking a bribe? Meeting a girl/boy friend for hanky-panky? We'll never know from listening to a scanner. Comforting a distraught victim or widow? Helping reunite a separated child and

parent? Making a death notification? Following up on a robbery investigation? The radio doesn't tell us any of that stuff. Occasionally an aberration like the Rodney King debacle will generate some incriminating radio messages, but that's about it.

And that's just the patrol people. There are a lot more employees behind the scenes who seldom if ever say a word on the radio... detectives, support services, SID technicians, office pogues and paper-pushers, personnel, records, tactical planning...well, you get the idea. They "spend" a lot more of our dollars than the patrol coppers do. What goes on over the radio is really a pretty insignificant clue as to how "our employees" are spending the money we entrust them with. It can be the exciting part, of course, and better than most anything on TV or in the movies.

And not only that, but the vast majority of our tax dollars go to the hundreds of thousands of government employees.local, state and federal, who never come near a radio at all.

It's only my opinion - and you'll not find a bigger scanner fan than me anywhere - but I think we sometimes come up with highfalutin, even disingenuous reasons why we simply MUST be allowed to listen in. At the very bottom of it, I think most of us just LIKE to listen. After all, it is the best show in town.

Date: 2002-05-01 04:33:00 UTC
From: Evan Platt
Topic: 11039 Message: 11039

I have 854.5125 in my scaner - I had it as LifeFlight Black Mountain, however I've been hearing police type traffic on it in Sunnyvale.

Any ideas as to who this is?? It's coming in scratchy, if it helps. I'll post more if I find out, i.e. callsigns, etc.

(Ok, it's on a two-way radio, so I doubt it's intermod.)

Thanks.

Evan

only fooling ourselves. LAPD, for instance, has about 12,000 employees, only a small fraction of whom are out on the radio. What do we generally hear on the radio? Where they're being sent and what the calling-party told the operator was going on. Not much else. Unless it's a real crime, then we hear what they looked like and which way they went . The officers may be out an hour or two, but the radio usually gives us absolutely no clue whatsoever as to what they're doing. Are they goofing off? Taking a bribe? Meeting a girl/boy friend for hanky-panky? We'll never know from listening to a scanner. Comforting a distraught victim or widow? Helping reunite a separated child and parent? Making a death notification? Following up on a robbery investigation? The radio doesn't tell us any of that stuff. Occasionally an aberration like the Rodney King debacle will generate some incriminating radio messages, but that's about it.

And that's just the patrol people. There are a lot more employees behind the scenes who seldom if ever say a word on the radio... detectives, support services, SID technicians, office pogues and paper-pushers, personnel, records, tactical planning...well, you get the idea. They "spend" a lot more of our dollars than the patrol coppers do. What goes on over the radio is really a pretty insignificant clue as to how "our employees" are spending the money we entrust them with. It can be the exciting part, of course, and better than most anything on TV or in the movies.

And not only that, but the vast majority of our tax dollars go to the hundreds of thousands of government employees.local, state and federal, who never come near a radio at all.

It's only my opinion - and you'll not find a bigger scanner fan than me anywhere - but I think we sometimes come up with highfalutin, even disingenuous reasons why we simply MUST be allowed to listen in. At the very bottom of it, I think most of us just LIKE to listen. After all, it is the best show in town.

73

well doing a quick search it could be Oakland police (trunked so it would
be choppy) or alco medics (again trunked) the only convectional thing that
showed up was LA county transit

It's not trunked.. (it's scratchy not choppy - shaken, not stirred). I'm hearing both sides, unless for some reason the Oakland PD happens to be on the same frequency for an extended period. Maybe it is Oakland - just ironic it lasted so long on the same channel, unless that's normal for Oakland. I heard units do 28/29's.go 10-8, etc. Nothing now.
What would a typical unit ID be for them? Maybe it would ring a bell if I heard it. I doubt it's LA County transit - that would be some awesome skip!

11052. Asking a Favor

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-01 07:58:19 UTC
From: wa6ubw
Topic: 11052 Message: 11052

During the past several days there have been messages which filled as many as four pages with stale (repeated) text. I'm limited to a 28k connection at present and it takes time to display and scroll thru all that text.

It would help if people posting a reply would -snip- off excess lines of text and leave only that to which they are replying.

Also, some of you post text which is not line formatted to fit in the message box, which has to be read by horizontal scrolling. If it is something you can control, could you use conventional formatting.

Thanks a lot from someone who really enjoys reading this mail.

Confirmed!! 854.5125 is San Rafael Police dispatch. I heard them go out on a call, then switched to San Rafael FD 46.200 and was confirmed. They also had a 10-33 at 421 3rd St. Pasta Pomodoro and I looked up that location and confirmed it. I dont' know why SRPD is on this frequency, it might be a patch or somethig, and I guess they are still LRT? Anyway they sound good from Richmond.

Yes that is San Rafael PD, they are also on 859.9625
They had a failed 800 MHz trunked system and they are suppose to be the first department in Marin County to go to the new digital system if and when it gets operating.

11060. Bay Bridge fun

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-01 16:24:08 UTC
From: Jordan Hayes
Topic: 11060 Message: 11060

They are going to stop traffic on the Bay Bridge this morning (10am?) to try to get some upward flex to allow a barge with 4 giant cranes headed to the Port of Oakland under the western span of the bridge. It's low tide, and they have about 23" (!!!) of clearance right now, so they are hoping that when they stop traffic it'll help.

Good luck!

I can see the barge passing from here, but I'll miss the actual point where the barge gets stuck under the bridge (just kidding!), and I'm looking for a marine channel that might be giving updates.

VTS on Channel 14 (156.7) says there is a 100yd security zone around the barge, but there are plenty of lookie-loos out there checking it out.

/jordan

I guess the barge is gone now but I did take a look at the previous
hour pictures and found a picture of the barge right before it went
under the bay bridge. You can see it here...
http://www.norcalscan.org/misc/crane_baybridge.jpg

And the first cars back on the bridge? I wonder if CHP sits at the
other end with radar and nails them ;) It would be real tempting.....

Good day!
Jake

I would assume that CHP runs a traffic break and just gradually speeds the traffic up to 50.

11088. Re: Re:available frequencys

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-02 17:55:39 UTC
From: KMA367 / Harry
Topic: 11088 Message: 11088

To keep up with upcoming frequency changes, including the "give backs"
that are often required when an agency goes to another band, I try to
check these sites from time to time:

Northern California APCO: http://www.napco.org/log.htm for Police &
State/Local Govt generally - updated approximately monthly.

For searches that include applications nationwide, go to the FCC Search
sites at ANY of these URLs:

http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/uls/filenum.hts
http://svartifoss2.fcc.gov/cgi-bin/ws.exe/genmen/uls/filenum.hts
http://svartifoss2.fcc.gov/reports/filenum.cfm
http://gullfoss2.fcc.gov/reports/filenum.cfm

IN the drop-down box for Coordinators, look for the radio service you're
interested in,
for example:

For Police & Local Govt, it's usually APCO
For Highway Freqs, select the AAHTO
For Fire Service it's usually the IMSA
Alarm Companies are CSAA

Fortunately these sometimes very large databases are in order by state.)

Hope that helps,

11089. Alameda Fd on ALco trunk

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-02 18:03:00 UTC
From: Ben Kellogg
Topic: 11079 Message: 11089

Here's an interesting thing that is happening and don't know why it's happening..

When my 780 locks onto any alameda fd channel, it locks on but there is no audio. I does this for i'm assuming the length of the transmission then it goes on scanning. I thought it was because i am too far away to pick up audio for the channel but not far enough for the scanner to lock onto the talkgroup... But now i don't think that is the problem because i pick up alameda pd ok...

Anyone have any ideas?

It's an escort of some sort -- I saw a 'numbered' unit on 280 pulled over and waiting.

(A numbered unit is just a normal CHP unit with a paper number in the rear window. I don't know the protocol by which this works, but I've seen enough of the units to know what they are.)

Yep, those things are really SUPER, aren't they! If anyone has trouble opening that loooong URL, go here: http://shorterlink.com/?VHDJ29 and it will redirect you to the R/S page...it's their part number 12-2052

R/S also carries a similar item that works by plugging into your cassette player, their stock number 12-1999, online thru this link: http://shorterlink.com/?Y24QOK - be aware with this "cassette adapter" though, that some cassette players (like the one in my 98 Blazer) won't work... they seem to think it's a "stuck tape" and keep ejecting it.

An extra benefit of these is that you can run your scanner or whaterver at pretty low volume... thus extending its battery life on each charge. Let your car's radio or cassette amplifier do the work. Just play with it a bit to see the lowest scanner-volume setting you can get away with.

Good price on that too, Ben... I thought these things were up in the $70 -80 range.

Harry Marnell

Chinese Vice Premier Visiting Hizhonor. Supposed to meet the Gov tomorrow.

Special CHP detail. They close off the freeway on ramps. They use "P" numbers to designate the ramps so as not to give away any secrets. The tail end car does a rolling break and they tear down the freeway at about 90 when all the traffic is cleared. Pretty cool.

The Secret Service is responsible for protection of foreign heads of state in the US, with the exception of those at the UN, who are protected by the US Marshals Service.

Motorcades will close the streets regardless of time of day. To put it simply, notifying local law enforcement is a matter of courtesy, but the local authorities have little say in the matter of what happens or when it happens.

You shouldn't have a receive problem as WIDE frequencies should come
in strong. Being in Livermore you're close to Crane Ridge, which is
for WIDE. Alameda PD uses LOCAL frequencies. Possibly a programming
error?

Yeah, I knew I that, just was venting a little steam about the major lack of coordination and respect between the Feds and everyone else. Why couldn't they have notified local LE about the change of plans here in EPA when President Clinton came to town? They (SS) changed plans notified the CHP since, as I said, they were handing the escort. But with NO advance notice and I mean NONE, wanted EPAPD to block off about 10 intersections. ALL officers on duty already had prior assignments to block Different streets. I remember seeing the EPA Lieutenant, with his arms raised in the air as to say "what the hell is going on " as the motorcade flew right by the intersection, where they were supposed to turn left. EPAPD never did get all the intersections blocked because A) they had NO time to move and B) simply don't have the manpower. Stupid move on the Feds part if you ask me.

Henry asked about free mailers. It seems that I'm receiving a much greater amount of spam in my hotmail account, that has somehow eluded Hotmail's bulk mail filter. The increase in spam seems to have coincided roughly with Hotmail's efforts to get users to purchase additional disk space. Hotmail also seems to have adopted a more vigilant posture with regard to disk space usage.

Now, I'm all for Microsoft when they give me free, reliable email that works from any browser. Bill has the money to share. But I think I just might smell a rat in the confluence of recent Hotmail changes. I also use two other net mailers and have not seen spam increase there. Could Hotmail be deliberately letting more spam thru to encourage users to buy more disk space? Does Bill really need our $20/year?

Has anybody else seen their spam skyrocket on Hotmail? Quite a few of my friends have noticed the same thing. Suddenly, Yahoo doesn't look so bad anymore...

Topic: 11086 Message: 11124

Not to get off on my officer safety rant again, (and thanks to those that backed me up - coincidentally they were all public safety officers - or mabe that wasn't a coincidence) however think events like this are best posted after-the-fact, i.e. "today at 9 AM to 12, SFPD worked a sting operation ....". First and foremost, officer safety. True, someone could listen on a scanner, but what if on the offchance, someone's monitoring this group? Me for example - I can't pick up SFPD from my house. However let's say I know a friend is 'working' San Francisco. I might call him and say "Hey, the (insert derogatory term for police) is working a sting at Filmore and Haight - find a new place to 'work'. Now let's say it's found out that someone here posted the informaation. First, that could get an agency to want to shut down this group. Second, I believe an agency could consider you an accomplice and charge you with interfering with an ongoing investigation (can any active officers / lawyers back me on this?)

Yes, I know the 'theme' to this group is breaking events, however fires type events are different. If I post a working fire, a buff / photographer / stringer may go out and photograph it. I'd certainly HOPE no buff/ stringer would go out and attempt to photograph a sting - I can GUARANTEE you you'd get a first hand look at how an arrest is handled!

IMHO, there's nothing to be gained by anyone by posting an in-progress sting type operation...

(Is it a coincidence that the people who back me up are law enforcement and the people that balk at me are news media??)

Evan

I agree with Evan. Things like that are better left unposted, or posted only after the undercover work is over. I monitored a lengthy stakeout and tailing of a drug dealer in Livermore a few weeks back, and it was fun for hours. But I didn't post it here because that might have somehow compromised the police op. And the last thing I want to do is get in the way of our hardworking cops.

OTOH, I can't believe that some cops use open freqs for this kind of work. They could use cell or Nextel phones, for crikey's sake, and have total privacy. But that's another rant. It's late and I'm tired. Is there an echo in here? ;)

11127. Need to Restrict "IN-PROGRESS" list to California Incidents

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-03 07:52:59 UTC
From: Harry Marnell
Topic: 11127 Message: 11127

At last count by the International Association of Chiefs of Police, there are 18,769 state and local law enforcement agencies in the U.S., employing 663,535 officers.

FEMA's National Fire data center reports that there are 26,354 fire departments in the country, with 1,064,150 career and volunteer firefighters. On average, a fire department responds to a fire in the United States every 18 seconds.

There's no way we can handle potential input from all these agencies, so the "In-Progress" List must restrict itself to California incidents.

If you're out of state, or wish to receive incident news from other areas, you may want to search for or start your own group at http://groups.yahoo.com/ It's a simple, straight-forward process.

SECONDLY, this list began as an "alerting" and updating source for police and fire incidents; it has gradually become a sort of "chatroom," filling our Inboxes with extraneous (and often VERY interesting) messages.

Therefore, to improve the signal-to-noise ratio, I've established a separate "InProgressDiscussion" yahoogroup for us to take these off-topic discussions. It's at http://groups.yahoo.com/group/InProgressDiscussion/ You can subscribe there, or with a blank email to inprogressdiscussion-subscribe@yahoogroups.com

Also, don't forget that In-Progress does have an actual - though underused - "Chat" room available at http://groups.yahoo.com/group/in-progress/chat

Thanks... I'll send out yahoo-invites for the new discussion list to all current I-P subscribers.

Thanks for your understanding and cooperation!

Harry Marnell

Nope, it's mono. You can't make a mono audio signal into stereo.
Simply splitting a mono source doesn't make stereo. Stereo is
independent channels of audio.

Evan, although I doubt someone could be considered part of that crime by simply posting information, in this instance I would tend to agree with you. If fact that thought went through my mind. although it is an extreme long shot that the post would interfere with the operation, a REAL long shot. It is still something that one would maybe leave off here, after all we don't have to post everything we hear, I sure as heck don't. I monitor narcotics officers all the time and I sure as heck am not posting their frequency or talkgroups. HOWEVER, you think it is media types that disagree with you. Not always true, I know one friend who is in the media that agreed with you a few weeks ago about this type of posting. If you want to email me directly, I will tell you who.

Topic: 11086 Message: 11132

While we're posting opinions, here's mine:

Firstly, I find it ironic that the first day I have off in months, the day I plan to sit next to the email machine and quickly tune to whatever inprogress stuff turns up, that's the day that this discussion starts. <grin>

Second, people who fear that there will be a connection between someone with a scanner listening to something, then posting that something in BAYSCAN and then having that post read by someone who would interfere with a law enforcement operation have a greatly exaggerated sense of their importance. There aren't many people on here, especially in real time, there would be fewer reading their email, even fewer in a position to interfere, and even fewer who would. It just isn't going to happen, statistically. Think that crack dealers have friends who spend their time reading the incredibly boring posts in this group just in case their friend's street corner is mentioned so they can call them and warn them? Why wouldn't they just buy scanner and listen instead? Everyone here knows that while it's not illegal to listen to LE frequencies, it is very illegal to interfere!

Thirdly, officers involved in sting operations are constantly aware of being "burned". This is especially true of narcotics stings. Many street corner dealers have "lookouts" who's job it is to keep an eye on the vicinity and effectively perform counter-surveliance. As a result, these officers work in groups, and are well prepared for resistors. Eventually every sting get's burned by someone walking by and alerting the perps or the perps just noticing somethings wrong. The perps go away and come back a few hours later. We are not talking about deep-undercover DEA operations here and we don't live in Miami Vice TV-land.

Fourth, what's the point of a posting that claims "Four hours ago I heard the SFPD doing a sting of pickpockets on muni busses"? Would it be to gloat? I listen to my scanner, and I read this elist, to be aware of breaking situations out of my own curiosity, but such a post wouldn't help me at all, and I don't see how it would entertain anyone other than the poster.

Fifth (and it may be early but I could use a fifth right about the time you're reading this) this is Yahoo. NOTHING is posted in realtime.

Oh, and for those keeping statistics, I'm neither LE or Media, I support the former and dispise the latter. I have a scanner because I'm nosey and I read this elist because I want to be more efficient in my curiousity. It's a hobby for me.

You have good a valid points George. BUT, If they run the operation only one the one day. If they run it all week, then, and I realize this is a stretch, someone could get the information, it is better left off here. I would also agree with you that you are in no danger of getting arrested for posting the information, that is a bit much. As far as the bus line, if a perp was busted a Fillmore and Haight, it doesn't take a rocket scientist to figure out which lines they may be working. I know of about 4 they go thru that intersection off the top of my head and I have not lived in the city in over 20 years.

If I may requote and paraphrase myself:

It has a stereo plug. If you plug the stereo plug into a stereo device with a stereo output jack, and the source device is putting out a stereo signal, you will get stereo sound on your vehicle (or home) stereo system.

These things were originally designed - and are sold - for use with, for instance, portable CD and mp3 players. Just a happy coinky-dink that they also work with scanners, CBs, ham radios etc

Similar to G-I-G-O, they're Stereo-In-Stereo-Out, Mono-In-Mono-Out

It may have been the F-15 that crashed in the Gulf of Mexico. The U-2 would have had no problem picking something like that up from that high altitude. I'm not sure what time the original transmit was made.

This is from the AircommSouthwest group here on Yahoo:

"Confirming what I posted earlier today, CNN is now reporting that an Eglin AFB F-15C has crashed into the Gulf of Mexico, and a search is on for the pilot."

At 03:52 PM 4/30/2002 -0700, you wrote:

Right.Once a stereo sound goes thru a mono source, or if the original source is mono, it mon-mono-mono et.al. The source may come out both left and right, but is still mono out of each channel.

Lets be totally honest. The chance of someone reading something here and giving it to the bad guys is about as much chance that any of us will hit the lottery or break Barry Bonds record. Not going to happen folks. The only problem (if it is one) is some LE type reading it here and complaining. But you have a good point, if its "that" sensitive, put in on a digital (for now) or encrypted channel which SFPD already has. Interestingly enough, they were chatting about the security of the Vice President of China and the Governor last night on A12. They mentioned, several times, the 19th floor, which I would take an educated guess was the St.Francis Hotel. Did make for some good monitoring. Back to the pickpockets, since it don't mean a thing....I guess the perps were on the 22 Fillmore then (no big surprise here, been a bad bus line for many years)

You shouldn't have a receive problem as WIDE frequencies should come
in strong. Being in Livermore you're close to Crane Ridge, which is
for WIDE. Alameda PD uses LOCAL frequencies. Possibly a programming
error?

And at 60,000 feet, they wouldn't at least pick up the signal, even if it
was weak? That would be line of sight I believe.

Well it's kinda configured just the opposite, for one scanner to two antennas, but that just depends on the connectors on your coax.

I've never had much luck doing either way... multiple scanners to a single antenna, or multiple antennas to one scanner.

Except WAY back, prob late 70s, when somebody had a scanner out with separate antenna jacks for VHF and UHF. But the radio stunk, anyway. Anybody remember that one?
Seems they always try to add one new doodad, and something else suffers. ya can only squeeze so much out of a machine!

I have a two way radio dedicated to CHP - Vertex 1011 low band - 99 channel alpha (OK, ther'es other frequencies on there, but mainly CHP). I have groups assigned - "Redwood City" , "San Jose", "Dublin", etc. In each bank is the mobile and the base, with no scan delay. When I'm in San jose, I go to that bank, and hit scan.

Works for me. :)

And BTW, I will have pics of my mobile setup this weekend. Consists of:
Vertex 1011 low band
Kenwood 800 mhz radio
RELM Ms-200 scanner
kenwood tmg-707 dual band ham radio

About 1720-1740 today I monitored odd transmissions on Blue and Aqua. I heard them again about 2200-2215. It sounded like guys goofing around on the radio, making jokes and rude comments. Blue frequently had an odd squeaking sound.

Could this be something skipping in from God knows where? I can't imagine that CHP officers are the source of any unprofessional transmissions.

Those are correct for Alameda City, which you didn't mention County or City before. Keep in mind Alameda City uses the LOCAL freqs. If you can hear the LOCAL freqs there should be no reason you can't hear Alameda City or anyone else who does (San Leandro, Newark, Union City). Considering you can always hear the control channel the scanner will jump to a voice channel regardless of whether it receives voice or not, which sounds like what's happening.

Here's how they're divided up:

Date: 2002-05-04 16:47:08 UTC
From: reno_huskerdu
Topic: 11177 Message: 11177

About 1720-1740 yesterday in Livermore I monitored numerous odd transmissions on 42.62 (Aqua C) and 42.34 (Blue C). I heard them again about 2200-2215. It sounded like guys goofing around on the radio, making jokes and rude comments. Around 2210, 42.34 frequently had an odd squeaking sound.

Could this be something skipping in from God knows where? I can't imagine that CHP officers are the source of any unprofessional transmissions.

But if it were skip, it would have to be from the west, right? The troposphere would only be active where the sun is energizing it, and at 2200 that would only be to the west of CA. Hawaii? I shot plenty of 11M skip from Hawaii back in the CB years.

Or maybe it was just some CHP cutting loose car-to-car on C.

Jordan, it is one whole system and can be programmed in as one; those
freqs are just divided up among the users. You *can* put them in as
two trunked systems but it's only useful when you can't receive LOCAL,
like myself. It keeps the scanner from jumping to freqs it definitely
won't receive.

FROM STAFF REPORTS

LIVERMORE -- An 18-year-old Modesto man was killed Friday night when his car spun out of control during an apparent road race on Interstate 580 near Livermore.

Witnesses said the car, a black 1991 Honda CRX, was traveling westbound on I-580 near Airway Boulevard at 7:39 p.m. when the driver lost control, hit a guardrail, spun across all four lanes and hit a chain-link fence, said CHP Officer Levy Barnes.

The driver was pronounced dead at the scene, Barnes said. The driver was not wearing a seat belt but remained in the car where most of the damage was on the driver's side, Barnes said. Two other cars racing the Honda drove away at high speed after the crash, according to witnesses.

The vehicles are described as a yellow Volkswagen Rabbit or Honda Civic and a gray Ford pickup truck.

No no no, it is only useful if you *cannot* receive LOCAL. It keeps
the scanner from going to a freq you can't receive, possibly making
you lose a conversation if you're in search mode. If the freq isn't in
the scanner then the scanner never leaves the control channel.

The way ALCO is setup is that the sites on the west side of the ridge
have ALL licensed frequencies for the network, the sites on the east
side of the ridge, and south facing (such as Fremont), only have WIDE,
or about half of them.

With a trunked system you can put talkgroups into user groups. These
user groups can then be enabled or disabled for specific frequencies
in the system. I'm not talking about scanners in any way, the system
itself is configured this way.

They're not exactly "unmarked" cars. CA law specifies that any car
working traffic enforcement has to have white doors, be white above
the fender line, and have an emblem of the agency on the doors, along
with the usual "single steady burning red light". An all white car
solves the problem.

11194. Re: [bayscan] CalStar Frequencies

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-06 04:53:17 UTC
From: Evan Platt
Topic: 11154 Message: 11194

We're not really dispatched via Felton 151.37 - we're dispatched BY Felton CDF, but we don't come up on CDF unless that's our enroute / travel / onscene frequency. 856.4375 is Santa Clara County County control 91 - Ambulance dispatch for the county. All ambulances (ground based) are dispatched on this frequency, and 'advise' on this frequency. Calstar 2 will advise (rather quickly) their status. Typically "Control 91, calstar one enroute to xxx and xxx." and then switch back to our frequency.
857.4375 is Control 92 - ambulance to hospital. You'll hear "Unit 342, Code 9 valley med" or "Can I get a ringdown for valley med" or whatever hospital they're going to. You'll then hear the patient information the ambulance is giving to the hospital.
852.2875 I have as LifeFlight Mount Allison, 853.7875 I have as LifeFlight Mt. Diablo, 854.0125 rings a bell, but I don't recall it offhand.
464.5 was licensed to one of our staff for his personal/business use, I have no idea HOW it got associated with Calstar - never been used by us - may just be a coincidence he's licensed on it since he before he joined calstar.
867.5375 is our primary frequency, actually a government frequency with sites on Mt. Vacca and Loma Prieata (among others. Calstar 1 uses Vacca, Calstar 2 uses Loma." You'll hear CS1 and 2 lifting, and getting a scene information. 868.3875 I believe is our Mission Peak frequency - we rarely use it, and I think only one of our flight nurses really even knows it exists.

Hope this helps.. :)

If you hear anything on 854.0125, let me know what you make it out to be. I'm having a senior moment.

If the ground plane is above the roofline, and there are no substantial obstructions nearby, then you're in phat scan city already. I'd scan for a few weeks and see what you get now, before I thought about raising it any higher. When you go higher, people notice. Unobtrusive is best imho.

The shuttle doesn't operate on the Norad frequencies. 271.000Mhz belongs to the SAOC for WADS (Western Air Defense Sector). While 252.0 is listed as the primary contact freq, all defense flights in the Bay Area have been operating off 271.0 with Bay Flights (mostly but not limited to the F-16s out of Travis) calling "Bigfoot" which is the command center. I've only heard Bigfoot a few times, since they're always moving around.

There's more chatter about this kind of comms on the AircommSouthwest group, if your interested.

BIGFOOT doesn't move around at all: they are static at McChord AFB in Washington. There are a series of transmitters around the country, they can turn on and off.

> Bay Flights (mostly but not limited to the F-16s out of Travis)

BAY is the callsign for 144FW (Fresno: Air National Guard); I've never heard it used for anything but them. There's a detachment flying out of Travis these, but they are technically from Fresno.

Actually, the F-16s that are flying out of Travis, using the Bay call-signs are out of Hill AFB in Utah. I'm on the outskirts of Travis, hear them ident as Bay-41, et al, on the Travis freq 321.000Mhz. Once they go airborne, and fly over my roof, they push to 271.0 so I know it's not a mis-id on my part.

http://www.af.mil/news/Apr2002/n20020408_0540.shtml

This is a decent article on their deployment. As for Bigfoot, I was misinformed, which was why I was under the impression they were an airborne command center.

"Cleared for the option" means the ATC is advising you can either make a full stop landing or touch and go. Common courtesy dictates that the pilot would advise if s/he's attempting touch and go, so if the pilot simply acknoweldges, the pilot will be making a full stop landing.

This is applicable for fixed wing, not really for rotor.

Evan, any information on REACH's frequencies?
Thanks for the CALSTAR info.

Up here in Sonoma County, the home base for REACH, the freqs they use are:
155.265 blue 2 primary up here (Control 9 Sonoma County)
155.100 blue 1
I have heard them on CALCORD, S&R freqs
all the fire freqs for the county
and they dispatch on MED-10 (462.975)
and of course, all the air freqs.

Yep, after being in the "monitoring" community for 40 years, I've
learned that there's a HUGE variety of things people like to listen to.
What one guy thinks is boring as hell, someone else stays glued to...
cops, trains, phones (back when it was legal :-)), taxicabs, security
guards, malls, aircraft, fire, feds, hams, CB... you name it. Makes
it enjoyable for lotsa people, each in their own way.

Last year we even had Betty Fumakuo (sp?) who didn't have a scanner but liked listening to people talk about listening.

Robert,

I've received the Klez virus (worm) several times within the last two weeks. According to the white-papers I've read, not only does it use your address book to spread itself, but it also uses the temporary internet files cache, searching for e-mail addresses. I sent a few headers to the security department of the senders ISP since the user might not even know they're not infected. Since then, I've stopped getting it.

Good luck everyone.

I can speak with some authority on this one..."cleared for the
option" allows an aircraft OR helicopter (or blimp, for that matter),
the option of touch and go, stop and go, or low approach.

46.50 / pl 82.5 (original poster: try this pl to confirm if this is what your hearing) is "control 6" aka district fire, all the little depts between Sausalito and Fairfax.

39.52 / pl 82.5 is "control 2" it is MCSO's ch2 and is for County Wide Mutual Aide.

Listen for the accent, a southern one is usually a hint, also make note if they give the times (is that what you meant Harry)? I have noticed when I get skip that the dispatch times are sometimes as much as 3 hours later, that will tell you just how far away it is (well, at least generally)

From: KMA367 / Harry
Topic: 11239 Message: 11249

"Line of sight" is generally true except for shortwave frequencies, which are usually defined as below 30 Mhz... those freqs more readily bounce off the ionosphere and the earth, causing them to travel great distances, skipping along... hence the word "skip." When atmospheric conditions, sunspots and the like are just right, higher frequencies will skip great distances as well...it's not all that unusual for frequencies up in the 30 & 40 MHz range to skip hundreds or, more likely, thousands of miles; when that happens you're able to hear traffic from the east coast come booming in here in California... and the best places to look are the 33 MHz fire freqs, and 37, 39 & 42 Mhz police freqs.

But back to line of sight... it's a pretty flexible kind of thing, not "exactly" line of sight at all. It's generally applied to freqs above 30 Mhz, but radio waves also will bend, bounce off mountains, buildings, etc. "Line of sight" for radio waves is more of a general concept than than an immutable law of physics.

Lots of variables are going to play with your reception... location, antenna type, location, coax, location, frequencies, location, receiver sensitivity & selectivity, location, atmospheric conditions, location, etc. It's impossible to accurately predict what you'll pick up from where... the only sure method is trial and error. Sometimes simply moving an antenna a few inches or a foot or two will make a world of difference is picking up certain transmitters. ya just gotta play with it.

Around 6pm I heard a test for the Ross VFD (Marin County)from my res
in Fremont. Antenna site is probably up near Mt Tam somewhere which
would get into Livermore easily. I'm sure what you are hearing is
Marin County fire.

11251. CDF Tac 9 Encryption

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-08 02:55:04 UTC
From: Brent Finster (DSL)
Topic: 11251 Message: 11251

For the past two days I have been hearing a lot of encryption on CDF Tac 9 (151.385) in the Contra Costa County area. Does anyone have any idea who/what it is? I wasn't aware that CDF had any encrypted radios...

Another possibility I thought of is that we have some skip occurring (or that other thing...what is it tropospheric ducting or something like that) at VHF highband frequencies which is pretty rare. The reason that comes to mind is I have also been hearing a lot of spanish speaking on White 2 (154.265) which is quite unusual also.

Any thoughts?

Always lurking,

Brent/K6BEF

Here is a good source on the radio horizon calculation:
http://home.att.net/~wittenberg/radar/chapters/ch04.dir/ch04pr.dir/c04p3.dir
/c04p3.htm
There is a calculator on this page:
http://home.att.net/~wittenberg/radar/calculators/horizon.htm

You will find some hams talk about the knife edge effect in diffracting
radio waves, but I always suspect they were inhaling.

Note that a good rule of thumb for the radio horizon is distance in miles =
1.4*sqrt(antenna height in feet). [Technically, you need to do this for the
transmitter and receiver, then sum the distances, but the transmitter height
usually dominates the calculation.] Generally the transmitters that you are
trying to receive are very high, so you don't have to put the antenna any
higher than is needed to have an unobstructed path to the source.

Channel 3 is for Patrol and 4 is Fire, I have had both in my scanner for a long time since I work in Sunnyvale. They are not used very often. Drills mainly. Patrol did use channel 3 for their units at the Great America semi-riot a few weeks ago. I see you have the FREQs now, the p/l is 141.3 for both.

Ahhh, Ben's the one with the Mighty Antenna - I remember now. ;)

Well, it's either Lateur Butte in eastern Shasta County or Southfork Mtn in western Shasta County (the same Mtn where 162.550 is broadcasted from) where he's getting the Command 2 traffic from. They could be using Hatchet Mtn in the upper Northeast portion of Shasta County but I doubt it. That seems too far out from the practice area to utilize. Southfork or Lateur are even chances - it's all down on whatever tone Ben is picking them up on.

Enjoy the listening Ben.

11276. mad scientist strikes again

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-09 18:01:34 UTC
From: Ben Kellogg
Topic: 11276 Message: 11276

Good Morning scanners.

The mad scanner has struck again.in the next couple of day probably i will be getting a pro-92. This will make me having 3 good scanners and 1 old one... now i am looking to add to my antenna cache so that i don't have to start doing splitters, combiners and all that pooey... so i need advice from you scanner gods out there what i should get.. Right now this is my setup....

scanners antennas

uniden 780 ground plane antenna from scanners
unlimited (the oh so powerful antenna that picks up everything) =)
uniden 245 9 db gain 800 mhz yagi (soon to be
put up but not there yet)
pro-92 (soon)
uniden 855xlt (older)

So my plan is to get one antenna for each for 780, 245 and pro-92 and then maybe do a combiner for the yagi for both the 780 and 245. don't know if i'm going to bother with the 855xlt...

So any ideas guys?

11277. Re: CDF Tac-9 encryption?

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-09 19:06:54 UTC
From: Tim XXXXXXXXXXXX
Topic: 11277 Message: 11277

Ben, are you stating it's skip simply because you've never heard any encrypted stuff on CDF TAC 9 in your area?

I suppose the first question is how is it determined that it is encryption? By that, I mean if it's digital data streams, it's possible it is some sort of data link type of thing. Traffic analysis though usually will let someone make a good guess as to whether it's voice traffic or data, since the secure voice traffic has the same general transmission length as regular analog voice, wheras there's more of a set pattern to machines communicating. So is is DES/DVP-sounding stuff, or is it an analog, speech-inversion type of system? If it's analog, maybe they're transmitting a CTCSS which could provide a clue.

Is CDF TAC 9 normally a repeater, or simplex? If a repeater, is the CDF repeater rebroadcasting the transmissions in question, or what?

I know nothing about the CDF (heck, until about a month from now, I'm still living in Michigan!), but it sure would seem unusual for them to have the need for encryption. But I'm wondering out loud how someone knows it's (voice) encryption as opposed to some form of 'record mode' data streams, and then how someone can state it's skip because whatever it is, they don't hear it in their area.

Could it be another state agency, which is known to have secure voice, using their secure voice capability on a CDF channel that they have on their radios for mutual aid type reasons?

Ben, are you stating it's skip simply because you've
never heard any encrypted stuff on CDF TAC 9 in your
area?

I am in part stating this opinion on the fact that in my years of listening to cdf i've never heard of encryption of cdf. As well as i have never heard anyone state that they have ever heard encryption besides you on tac 9 or any other channel..

I know nothing about the CDF (heck, until about a
month from now, I'm still living in Michigan!), but it
sure would seem unusual for them to have the need for
encryption. But I'm wondering out loud how someone
knows it's (voice) encryption as opposed to some form
of 'record mode' data streams, and then how someone
can state it's skip because whatever it is, they don't
hear it in their area.
I am in no way any expert on types of encryptions so i will leave that to someone else who knows my about that...

Could it be another state agency, which is known to
have secure voice, using their secure voice capability
on a CDF channel that they have on their radios for
mutual aid type reasons?

If you do not have a pl tone entered into that freq it could be anything. There are no pl tones for tac channels but indivual small fd's do work off those channels and do have pls. The best thing to do is to look up the freq on the fcc database and see what other agencies use that freq..

Btw you said you were moving to san mateo but are you actually here or picking this up from michigan??

Subject: [bayscan] Re: CDF Tac-9 encryption?

Ben, are you stating it's skip simply because you've
never heard any encrypted stuff on CDF TAC 9 in your
area?

Is CDF TAC 9 normally a repeater, or simplex? If a
repeater, is the CDF repeater rebroadcasting the
transmissions in question, or what?

I know nothing about the CDF (heck, until about a
month from now, I'm still living in Michigan!), but it
sure would seem unusual for them to have the need for
encryption. But I'm wondering out loud how someone
knows it's (voice) encryption as opposed to some form
of 'record mode' data streams, and then how someone
can state it's skip because whatever it is, they don't
hear it in their area.

Could it be another state agency, which is known to
have secure voice, using their secure voice capability
on a CDF channel that they have on their radios for
mutual aid type reasons?

hehe - good copy. This is the tanker training that is going on this
week. The name of the fire is always the Buckhorn fire - and there's
sometimes a second fire that I can't recall the name of if they need
to divert. You'll hear excellent training operations on 151.295 also
of new air attack captains and air tanker pilots etc.

And isn't this Bayscan? I thought Redding was in NORcal ;)

As far as CDF knows here in Tehama county, negative - not possible, there is no encryption on CDF right now anywhere in the state. CDF Bendix Kings and Kenwood radios don't go encrypted at all. Arson investigators use cellphones, chief net, or "opposite of clear-text" on the CDF freqs. Anything to deter the "normal" arsonist from monitoring or picking up on something. Also, there isn't much radio traffic to arson investigation anyway. It's one guy on duty for the entire county or half of a county every day just about.

Also, word has it not this year but possibly next fire season tacticals will be assigned a PL as well. This will be a statewide standard and the PL would be the county's PL, which is the second digit of the unit number. 24 would be tone 4, 16 would be tone 6 etc. This is because they keep recycling their frequencies to be dispatch, tactical AND command nets now and the poor firefighters on the line using their tacticals are getting bombarded by nearby dispatchers and command nets.

Sent: Thursday, May 09, 2002 15:16
Subject: Re: [FedCom] Re - Secret Law

Peter is correct BUT will this whole thing going to get out of hand
again?
Difficult to believe that FBI agents would visit people just for asking
a
simple question to avoid violating the law -- but just because an
investigator talks to you doesn't mean you've violated any law!!!! Also
even before 9/11 many airports had expanded their no parking/stopping
areas
on approaches to airports, public access roads close to taxiways, etc.
Furthermore many 'sensitive' facilities always had a policy to respond
to
any vehicles stopped EVEN if on a public highway going right by that
facility. Law Enforcement can ask folks to move along in just about any
circumstance anyways. Don't you think that the feds already have people
assigned to look at all these scanner related hobby mail lists? On
FEDCOM
you don't even have to join the list in order to read and/or download
the
achieves. I would bet that the hobby publications such as "Monitioring
Times", "Popular Communications", "Scanning USA", would be doing
appropriate official press inquiries to alert hobbyists of such a law.

HOWEVER, apparently Hanscom AFB's open house/air show has restricted
scanner operation for visitors to the show per their prerecorded show
hotline at 781-377-5287 for details. Also the FAQ at the airshow
website
see htt://www.hanscomairshow2002.com appears to ban scanners, two way
radio
equipment, etc. BUT allows cellular/pcs phones.

FURTHERMORE, the U.S. Air Force has instituted a program called Called
"Eagle Eyes," the program aims to prevent terrorism by encouraging and
enabling Air Force members and citizens to report terrorist planning
activities they observe. The program also features processes for rapid
follow-up investigations and information sharing to other echelons of
command
and OTHER LAW ENFORCEMENT AGENCIES as appropriate.
REPORTABLE activities include:

-- SURVEILLANCE. Someone recording or monitoring activities. This may include using cameras (either still or video), taking notes, drawing diagrams, annotating on maps, or using binoculars or other vision-enhancing
devices. (BUT SCANNERS & RADIO COMMS ARE LEFT OUT??)
-- ELICITATION. People or organizations attempting to gain information about military operations, capabilities, or people. Elicitation attempts
may be made by mail, fax, telephone, or in person.
-- TESTS OF SECURITY. Any attempts to measure reaction times to security
breaches or to penetrate physical security barriers or procedures in order
to assess strengths and weaknesses.
-- ACQUIRING SUPPLIES. Purchasing or stealing explosives, weapons, ammunition, etc. Also includes acquiring military uniforms, decals, flight
manuals, passes or badges (or the equipment to manufacture such items) or
any other controlled items.
-- SUSPICIOUS PERSONS OUT OF PLACE. These are people who don't seem to belong in the workplace, neighbourhood, business establishment, or anywhere
else. This includes suspicious border crossings and stowaways aboard ship
or people jumping ship in port.
-- DRY RUN: Putting people into position and moving them around according
to their plan without actually committing the terrorist act. This is especially true when planning a kidnapping, but it can also pertain to bombings. An element of this activity could also include mapping out routes
and determining the timing of traffic lights and flow.
-- DEPLOYING ASSETS: People and supplies getting into position to commit
the act. This is a person's last chance to alert authorities before the terrorist act occurs.

So aero monitoring/photo hobbyists are probably going to be greatly affected by these new reporting guidelines that perhaps have also been instituted selected FAA civilian airports.

Regarding scanners at FAA major airports, etc. What isn't logically is that most radio signals travel off the airport site anyways. I'm 30+ miles
away from the nearest major civilian passenger airport and even with a portable antenna on the scanner I can pickup the repeaters that carry airport administration, fire, and some of the security activity (one talk
group is patched back into the old high band VHF system & may be used by some security personnel), the State PD troop assigned to security uses a digital trunking system.

Another aspect is that hobbyists generally are going to stick around an area for a fairly long period of time. Now they will become suspects when
in fact a group of vehicles travelling quickly though the airport at various times could actually take pictures, record audio, & scoop frequencies relatively quickly. There's plenty of ways to do covert video
surveillance from vehicles.

The potential terrorists we are dealing with have shown in the past that they have some very smart people who plan these attacks and part of the equation was the surperb "covert" surveillance.

I guess the aero related scanner hobbyists have become casualties to these
well meaning programs. BUT frankly this could also apply to folks who like
to watch trains, ships, and perhaps ANY non public related event as well.
Furthermore, I would guess that even outdoor hobbyist/hikers that have knapsacks on their backs & are walking into the woods next to high voltage
transmission lines could also be termed suspecious!!!

Perhaps more information will become available in the future. I highly doubt that any hobbyists wants to be a martyr to prove a point. If it IS
THE LAW than that's the way it is!!!!

11312. CDF encryption - answered my own question

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-10 05:33:23 UTC
From: Brent Finster (DSL)
Topic: 11312 Message: 11312

For clarification, I could tell it was encryption because it was speech inversion analog as opposed to a higher level. It was not data.

Today, I asked the CDF Battalion Chief who is the ECC Chief for Morgan Hill and he said that the CDF prevention personnel have encryption in their radios...believed to be Bendix-King EPH's. He stated that it very well might have been them on Tac 9 that I was hearing.

As far as the skip on VHF highband....maybe...maybe not...

11313. The sum of all fears

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-10 05:50:30 UTC
From: reno_huskerdu
Topic: 11313 Message: 11313

I scan primarily for the safety of my family. If terrorists attack Frisco, I want to know about it in time to get us away from the fallout before it crosses the bay with the prevailing winds.

After 3 months of scanning, I'm still not sure what is the best source for this kind of information. Sure, the CHP is likely to broadcast the info first, as they would have to deal with massive traffic jams of panicked residents, etc. But which CHP freq would be best?

I had hopes that their UHF (453.825) freq might be the best priority freq to load into my scanners, but that seems to carry a lot of traffic specific to the 101 north corridor.

So for now I keep the strongest local CHP C freq loaded as the priority channel in my scanners. They seem to broadcast "officer safety" bulletins in a saturation manner, on numerous freqs.

If the terrorist attack San Francisco and there is "fallout" bend over and his your A__ goodbye. your scanner is going to be of NO help, so don't worry about what FREQ to listen to or monitor. If they can pull off another 9-11 here, that would be different. I would suggest just keep on monitoring as much stuff as you can. BTW, when the Oklahoma bombing occurred, I found out about it from Menlo Park Fires channel.....(think about that one for awhile)

San Francisco would not be a loss. It isn't even significant as a financial center in the scheme of things. Most of the money went to LA after the quake.

Silicon Valley would be a good target to cause financial problems, while Livermore would be a good target thanks to the LLNL. They have plutonium all ready to be dispersed. Then there is the GE site on Vasco in Pleasanton, plus a very small scale reactor in San Ramon on Fostoria Way. Lots of nukes in the east bay. In theory, the nuclear weapons have been removed from Concord, though you can still see the bunkers.

Depends on WACKO thinking, the bridges or the airport would seem to be good targets, would sure screw up travel, remember these guys are nuts, who knows what they are thinking. I still figure they would do the same as 9-11, that is, several targets. Both SF and LA would get hit ... although I really doubt it will happen again. BTW, where the heck have you been Gary?

Speaking of USAR teams, if anybody gets a chance to see the "arsenal" of equipment they have , do it. Its quite impressive. Menlo Park (CA Team 3) is behind Station 77 on Chilco near Bayfront expressway. They recently had an open house with 3 new cranes being dedicated in the honor of 3 FDNY members that were involved in USAR stuff and died on 9-11. Sacramento also has a team (#7) . Very interesting .
Ed

Having lived for 23 years in NYC I hate to say it but I don't think any terrorists would even bother doing something out here.

San Francisco is insignificant compared to NYC and many other cities like Washington DC or Chicago even for that matter.

I mean San Francisco is nice and all but to me "a die hard New Yorker" San Francisco is like a small part of Manhattan to me...There is virtually no skyline, no theatre, no center for business ie. financial, fashion industry, etc etc, media is nothing out here compared to all of the major players having their main offices in NYC. Hell when I had to do a live spot on CNN out here after I recorded the audio of the NYC Fire Department they had to send someone in to meet me at CNN's San Francisco office to run the damn equipment!! There was zero staff in the office !!!

Ok I better stop going or Ill get back on an airplane to NYC lol..

Don't get me wrong I love it in the sleepy town of Sausalito but having traveled to many of the major cities in the world there is no other city that can compare to NYC.

As far as "worth blowing up," a terrorist isn't necessarily looking for the biggest death toll or greatest physical disruption possible to make his or her insane, suicidal point.

As if September 11th weren't bad enough, can you imagine the psychological toll it would have taken on us all if either of the D.C. area flights had hit their presumed intended targets? Even if the buildings had been evacuated in time, what would have been the the effect of seeing the White House or Capitol Building reduce to rubble? I shudder to think.

"Landmarks" can have psychological value far beyond their practical or monetary worth... and the bad guys know it. I'm not EVEN gonna suggest a list of them - that would be inappropriate and way off-topic here - but you can be sure the custodians and public safety agencies responsble for such places have made and continue to update contingency plans for them.

Sad new world, but it's the one we're stuck with at the moment..

You are going to open a HUGE can of worms with those comments Bob.
NO SKYLINE, open your eyes, SF has a great Skyline. NO Theatre, ever hear of Geary St., No not nearly as large as NY but has some nice theater's etc. Considering SF is only around 49 sq. miles, it has PLENTY to offer. You can KEEP NYC with all the neg. things about it I can think of. I won't go into them. But you can do that with almost any big city. Chicago, LA (yuck) etc, etc. Simple matter of preference.

Don't forget, the Bay Bridge carries more passengers everyday than the GGB. Depends on motive. The GGB while very important to travel, is also a big symbol of SF, California etc. Yeah, the labs may be targets, but so are both bridges ... And the airport, Hitting most any of the downtown high rises would cause a lot of problems too. Was there not a report of two perps with box cutters on a flight in Houston or Dallas with a destination of SF? or was that changed. There may have been several more targets. You KNOW Washington, DC was one (flight 93) . I would guess SF, LA would both have been hit and some other big towns too...remember, FEAR is one of the objectives of terrorists, and hitting most ANYWHERE does that.
How many people were leaving there mailboxes open recently, until they caught that nut in Nevada the other day?

Once again, Harry hits the nail on the head. This is without question, why the GGB is a target and would be MORE effective than the Bay Bridge, although as I pointed out, the Bay Bridge carries more traffic. Think of Seattle, what comes to mind? Seattle is certainly no financial center etc, BUT, the fear it would cause in the entire northwest part of our country. You can do that with most of the large cities. Think of the most well know building or buildings or landmark and you have the same effect as the WTC in NYC. Remember the effects of 9-11 reached the entire country, not just NYC. doing that most anywhere would have the same effects again. Its all the USA. Just hope we are thinking out loud and 9-11 NEVER gets repeated. enough on this, but to scanning.

Agreed 100%. IIRC the boxcutter guys... the ones who switched to an Amtrak train after thrir flight was gounded... were eventually found to not be at all involved and were released.

Ok, we're officially off-topic :-)

[To date, there have been zero arrests in the case; everything you may have heard in the aftermath about other arrests have all failed to produce an indictment]

To try to bring it back on-target, how many of you have plans for continuity of communications during any old kind of outage where power is gone for a while (more likely quake than terror, but)? We should be building WiFi networks and getting our Ham licenses. Anyone remember how UUCP works? :-)

Inversion or encryption? They're two different things. You either have
a donald duck-like sound, or you have open squelch sound with a tone
at the end.

Inversion is easily defeated with your computer and a soundcard. If
it's inversion just decode it and you'll know right away who it is.

Do you mean because the -245 has that "proprietary" battery pack? Isn't it just a few AAs wired in series? BTW, there's a NiMH pack for the -245 that's _way_ better than the NiCad pack -- mine lasts about 3x what the NiCad one did. Very much so worth it.

If you're going to store batteries for a time that you can't recharge, why not store bigger batteries that can recharge the smaller ones (or even run non-battery items, like a -780)?

As we're all contributing our "two cents" here, I've discovered the "?" sign code on the keyboard... it's ALT+155 (on the KEYPAD) then let go of ALT: while holding down the ALT key, type 155 on the keypad at the right side of the keyboard... not in the number row above QWERTY, that won't work.

Just my 10?

Now that we're being a tad on either the silly or bored side, and drifting some, this thought forced its way into my cranium...

You know, what we need is a statewide (or maybe just us "better" northern peeps) scanner-"rambling" group, for threads like this that are relevant to many, but not to the folks who are on the scanner lists primarily for radio/freq info.

Whaddaya think... it could be open, essentially UNmoderated and left to go wherever it wants... within reason.

Bingo. And then there's East Ave running right thru the place. I sure hope they close that off soon.

>Then there is the GE site on Vasco in Pleasanton,

There's no Vasco in P-town. Do you mean Vasco Road from Livermore to Brentwood? Or the GE(?) nuke site down on 84 just NE of 680?

> plus a very small scale reactor in San Ramon on Fostoria Way.

Didn't know about that one. It's right by the 680!

I think a chlorine gas attack is the most likely scenario, outside of the big cities. There are numerous depots of significantly-dangerous quanities, sprinkled around these glorious US.

Indeed. I don't own a home scanner for that reason, just portable and mobile. I use them inside with wall warts to power them.

I've thought of a nice little 12v UPS that would consist of a NiCad battery pack with integral charger. I could velcro it to the mobile. I could make one in a day, but maybe one of you guys know of a source to buy them already made?

Ed,

For Windows 9x (IIRC):

Click Start -> Programs -> Accessories -> Character Map

For XP it's under System Utilities the folder.

It'll give you all possible characters for a font and their extended
character key combos.

Having lived for 23 years in NYC I hate to say it but I don't think any terrorists would even bother doing something out here.

San Francisco is insignificant compared to NYC and many other cities like Washington DC or Chicago even for that matter.

I mean San Francisco is nice and all but to me "a die hard New Yorker" San
Francisco is like a small part of Manhattan to me...There is virtually no skyline, no theatre, no center for business ie. financial, fashion industry, etc etc, media is nothing out here compared to all of the major players having their main offices in NYC. Hell when I had to do a live spot
on CNN out here after I recorded the audio of the NYC Fire Department they had to send someone in to meet me at CNN's San Francisco office to run the damn equipment!! There was zero staff in the office !!!

Ok I better stop going or Ill get back on an airplane to NYC lol..

Don't get me wrong I love it in the sleepy town of Sausalito but having traveled to many of the major cities in the world there is no other city that can compare to NYC.

Don't forget, the Bay Bridge carries more passengers everyday than the GGB. Depends on motive. The GGB while very important to travel, is also a big symbol of SF, California etc. Yeah, the labs may be targets, but so are both bridges ... And the airport, Hitting most any of the downtown high rises would cause a lot of problems too. Was there not a report of two perps with box cutters on a flight in Houston or Dallas with a destination of SF? or was that changed. There may have been several more targets. You KNOW Washington, DC was one (flight 93) . I would guess SF, LA would both have been hit and some other big towns too...remember, FEAR is one of the objectives of terrorists, and hitting most ANYWHERE does that.
How many people were leaving there mailboxes open recently, until they caught that nut in Nevada the other day?

>>>thats for damn sure Tim

I have tried to tell folks that preparation for an earthquake is the
best preparation for terrorist activity as I have also said that I
believe that Californians would fare better in a terrorist attack on
a high-rise structure because of both engineering and being prepared to
respond to an earthquake by evacuation. I hope that neither eventuality
ever tests my beliefs but if I had to bet on one, or the other, it would
be an earthquake not a terrorist attack.

Good points Tim. You know how much retrofitting is going on and has been going on all over state. Buildings, bridges, freeways etc. Some might find this interesting, Buffalo Fire Dept. (NY) is still using 6 firehouses built in the 19th century and One built in 1900. Check it out www.ci.buffalo.ny.us follow the links to the fire dept. Wonder what upgrades they have? Wouldn't want to be in them in a quake, of course NY doesn't see many of those.

Correct. Different PLs won't prevent units from interfering with each
other if they're on the same freq and within range of each other.
Actually it would INCREASE the chance of interference.

The tones are only used on LOCAL dispatch nets, not the tac channels
(which operate carrier squelch to prevent interfering or missed comms).

How many 'home scanners' don't have 12V power inputs?

I have an RS-2045 and a -2052, and they are 'home scanners', but they have 12V power inputs. I've often thought that the 12V is probably a better source for the -2052, since it would dissipate heat outside the case...

11386. New "OFF-TOPIC" list

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-10 23:33:50 UTC
From: Harry Marnell
Topic: 11386 Message: 11386

For those times when we get waaaaay off-topic from the purpose of the scan and fire lists, I've created yet ANOTHER list to carry the OT load:

CalScan-OT ? California Scanning "Off-Topics"

Homepage: http://groups.yahoo.com/group/CalScan-OT/

To Subscribe: CalScan-OT-subscribe@yahoogroups.com
To Post messages: CalScan-OT@yahoogroups.com
Unsubscribe: CalScan-OT-unsubscribe@yahoogroups.com
List owner: CalScan-OT-owner@yahoogroups.com

Or maybe we'll take Root's suggestion and make everyone a moderator.

I've wondered why arson investigators often have an encrypted channel.
Reasons not to encrypt include cost, hassle, there are usually not that many
arson investigators and those usually have cell phones, most investigation
doesn't involve radio transmissions, etc. So, since they are encrypted,
there must be a damn good reason. What is it? What does encrypting these
dispatch/conversation fragments prevent an arsonist from learning which
could make a difference?

The obvious would be if the arsonist or his likely targets were under surveillance. If I, the arsonist, get in my car and turn left onto Central, and on my scanner I hear "Ok, he's now south on Central from Heartwood" I'll probably go to Kmart rather than go set a fire just then. And knowing that I might be under surveillance, I'll be even sneakier next time I go out and do it.

Same kinda thing as with drug dealers. Not completely foolproof, but encryption could make the investigation a bit easier and safer.

> blast radius is?

Despite media depictions, nuclear reactors are not explosive. They may release radioactive clouds, but they do not explode (excluding localized steam pipe explosions).

While you're making a list of local nuclear reactors, don't forget the one delightfully nestled in the self-declared "nuclear free zone" of Berkeley (UC).

Whilst I'm at it, allow me to mix my OT messages. Those of you new to the wonders of the ASCII character set, and using a version of Windows, may be tickled pink to learn that there is a table of these symbols with their numerical equivalents available to you (if you chose to install it). You may find it under Start>Programs>Accessories>System Tools>Character Map. Knock yourselves out (in some other list)! Also be aware that your email writing program may not be set up (or able) to handle them.

And they are still looking down that path. The tactical people won't hear the dispatch - that is their goal. Dispatch isn't going to hear the tactical units. The problem is just the tactical units have to hear the dispatch/command stuff as well as the tactical traffic. Putting a PL on it would cut the outside stuff out. The only thing I see is the dispatcher signal "riding" the carrier into the radio and bypassing the PL tone.

This is straight from the horse's mouth here in Tehama. Of course, we aren't as updated here as the other folks down south closer to Sac. ;)

Arsonists tend to be serial arsonists then?

Makes sense, I suppose we're all familiar with the term pyromaniac. I hadn't thought of this -- I was thinking that most arson was insurance fraud related.

Yes, they do tend to be such.

I actually doubt it's part of survellience of serial arsonists. More likely, it's to protect survelliance of potential arson spots during the fire season.

From: gary
Topic: 11313 Message: 11400

I know someone who was in that particular facility a few times and it doesn't have anything to do with nuclear, at least a decade ago. The micro-reactor in question is nearby:
http://www.aerotestoperations.com/facility.html

Regarding the danger from large scale reactors, the actual reactor core is supposedly protected. However, the used reactor rods sit nearby (water isolated) as the cool. This is the source of potential dirty bombs since they are not stored in very hardened containers. Note that even if the Yucca mountain facility is built to store the high level waste, the used rods will still have to be "parked" near the reactor site for about 3 years until they are "cool" enough to travel.

This is already too far off topic, but you can do a search on "operation roller coaster" to find out about the DOE research in spreading plutonium via high explosives.

From: robert sanford
Topic: 11417 Message: 11417

This may be of interesting to people on the list. It will be on Court TV on Tuesday evening at 10:00 pm

Inside the Chase
High speed pursuits are on the rise, and the methods police use to stop them are becoming increasingly sophisticated. Spike strips, the "pit maneuver" and police helicopters are just some of the weapons in law enforcement's new arsenal. This documentary focuses on the skills and tools that officers use to catch criminals on the run.

Hi Ben. I opened your web site and clicked on the online scanner link. Got an impressive list of frequencies but found no way to hear it. I am using speech output on my computer so if there is no alt text to indicate if there is a link to hit to get the streaming audio I am out of luck. I could read all the frequencies just fine but found no link other then the first online scanner link to clink on having to do with the streaming audio. I hope you can help me out here. Best regards, Jim

Here's the direct address:

http://12.232.140.85:8080

You can simply run Media Player and 'go to' that URL or double-click,
or click, the URL above.

Pagers have a kilowatt radiated power. If you design a scanner for "normal" signals, the RF level of the pager tends to overload the front end. Some scanners handle this better than others. Generally mobile units are better than handheld.

It is possible to get a "can" to notch out the pager, which is generally around 2 meters. I don't recall the exact freq, but it is really close to the coast guard.

You need to fire up the windows media player, go to file, open URL, then paste in the address. If you try pasting that address into the browser, it won't find the page.

11442. 127.2

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-13 01:50:33 UTC
From: Jordan Hayes
Topic: 11442 Message: 11442

This is the frequency for Oakland Airport Tower for operations on runway 29/11, and I can usually hear both arriving aircraft and the tower from my house in Berkeley. This weekend, some friends were coming in from LA, and I went to pick them up. I had this great idea: take a handheld and listen for their arrival on 127.2, then cruise up to the curb and pick them up. First of all, this is much more difficult than it appears! There's basically no place on airport property that you can stop your car. Also, while driving down 98th Avenue, I turned on my R-10 and was greeted with this awful whine that was synchronous with the speed of my car. Great, I thought: how's that for interference? I ultimately found a place to stop which wasn't exactly a legal parking spot, but also wasn't exactly marked as not being a legal place to park ... about about 2 minutes later, an Alameda County Sheriff drove by real slow and made it pretty clear that he didn't appreciate me sitting there. So I drove off airport property and found a legal place to park. Turning off the engine made the whine go away, and I had decent reception of the tower, so I thought everything was okay. But then I realized that I had an open squelch: fuzz all the time. So I adjusted my radio, but nothing I could do would make the fuzz go away! Also: everytime either an aircraft of the tower keyed up, I got a howl that made it really hard to hear what they were saying at times. Like I said, I get this at my house (on a -780xlt) all the time with no interference or howl. Is there something weird about that area or that frequency that would do that? When I took my friends back this afternoon, I decided to see if it was some combination of the antenna or the radio, but I got the same results with a -235 and with an Austin Condor antenna. I don't have problems like that in my car with other frequencies.

On the way back I was treated to a wicked car fire on 880N, an old klunker VW bug that I saw smoking from about 4 miles away. Oakland FD had doused it and dragged it to the side of the road and were investigating by the time I crawled by. Mmmm, smelled mighty good.

There's a common problem with the aftermarket cheap Brazilian replacement fuel pumps. The brass hose fitting is poorly pressure forced in place, and over time it backs out. This results in fuel being pumped onto a hot engine. If you know anyone who has a bug urge them to have a VW mechanic (regular mechanic is unlikely to know about this issue) attend to that loose fitting, most especially if the fuel pump proudly says "Made in Brasil" on it.

Speaking of Oakland Airport, did the Tower Lounge survive post 9/11 security changes? It was a great plane to scan, watch planes, and drink beer, all from a location nearly as good as the ATC personal used. You could easily scan SFO as well, since the signals were going over water and thus had little attenuation.

I think we talked about this a few weeks ago, but 296.7 (yes, AM) should come booming into just about anywhere in the Bay Area. But it's often silent unless/until someone needs it. These days it's usually U-2s from Beale (who get picked up about 3 miles from Beale and then get "controlled" to FL600 and back a few hours later. While they are active, there's another ATC sector (I don't know which one, on the list of things to do is to work another radio while they are active and find it) that gets simulcasted (so you hear 'normal' traffic, like United flights to Seattle, etc.) but once the U-2 (callsign PINION) gets above FL600 or handed off to Beale approach, the frequency goes silent again.

Well if you can run Scanner Recorder on the frequency and then send me the file so I can post it on my site so we may all listen to what the traffic sounds like.

Yes, they are using 151.445 , CDF has 3 Engines and at least One BC
rolling. East Bay Regional Parks' Eagle 5 flying towards the area
also. Location approx 1 Mile North of Rose Peak.
Alameda County Thomas Brothers Map 754 G7
Still unknown size aircraft or SOB .

CDF= California Dept of Forestry
standard 3 letter for each CDF ranger unit:
SCU refers to Santa Clara Ranger Unit
CZU would be Santa Cruz Ranger Unit
BEU would be San Benito Ranger Unit
LNU is Lake/Napa ranger unit
Local refers to the dispatch channel for that unit
(as opposed to statewide high level repeaters)

11460. Stopping the d#@$% pop-up ads

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-13 22:08:31 UTC
From: marnells@snowcrest.net
Topic: 11460 Message: 11460

One little tool I found that's particularly good at preventing all those damned ad windows from popping up is called "pop-up stopper;" you can toggle it on and off at will when you DO want a new window to open.

They have a free version available from http://www.panicware.com/product_dpps.html - which works just fine. When you have it on, just remembeber that NO new browser windows will open unless you click on the thing to temporarily disable it. So you will have trouble opening a site you see in an email unless you toggle it off. I love it.

Matter of fact, I'll upload it to my own server... you can get it from

http://members.cox.net/marnells/PopUpStopper.exe
...it's less than 500 kbs.

I've virus-checked my download & it's safe.

I guess that would explain why I didn't see anything from Mission Peak. ;-)

You may see a flight restriction pop up in the notams near the crash site,
which often gives the exact location of the crash. Use
https://www.notams.jcs.mil and do a radius search around N37 32 W121 48.

My favorite was a couple of weeks ago:

Unit reported an ADW
"Need a description of perp"
"WMA, long blonde hair, backpack. Looks homeless."
"10-4, Advising Mission units: WMA, long blonde hair, backpack. Appears homeless.
"Dispatch additional, need EMS unit. Victim attacked with hammer, looks like he's got a broken arm."
"10-4. Units stand-by for an all: <> in Mission, long blonde hair [etc]"
"Dispatch, additional on description: suspect armed with a hammer."

(no, duh!)

11492. Livermore PD channel 1B?

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-14 17:52:36 UTC
From: reno_huskerdu
Topic: 11492 Message: 11492

After 3 months of monitoring, I heard them mention a channel 1B today. It's apparently not in the trunked group (856.9625, 857.9625, 858.9625, 869.9625, 860.9625), because they use it when the 800 freqs are 10-1. So it must be another freq, maybe from the old system they used before they got 800 trunked.

When they switched to it this morning, I tried monitoring CALCORD, CLEMARS, NLMARS, and extender ... nothing there.

Anybody know what freq Livermore PD channel 1B might be?

Try the 800Mhz versions of CLEMARS and OES mutual aid stuff. I think
there's some national mutual aid freqs also. As for the freqs -
FreqofNature would have them. I haven't gotten to them yet on
NorCalScan.

Also look in Police Call or similar for a simple 800Mhz repeater pair
that isn't part of the trunked system but has similar license.
Redding has an 800Mhz repeater pair just outside of the city that is
an 800Mhz repeater NON-trunked when the trunked system goes down.
Redding PD also has 800Mhz Clemars - something like 868.5125 or
something like that - don't take my word for it.

A great idea. I should have mentioned that only the trunked group (856.9625, 857.9625, 858.9625, 869.9625, 860.9625) are listed for Livermore in Police Call. And if their 800 system is 10-1, I'd suspect that they'd use a longer wave system as backup.

No, I haven't ever heard them on it, but then again, I may not have it programmed (guess that answers that huh)? So I will put it in, although I can't usually get L/P, but maybe, since its a wide area, then I might.
I have to go over my list, but wonder if L/P has the IA channel. Thats what most ALCO users use when they have auto or mutual aid situations.

If you go to the radio horizon calculator, using 4000ft for Diablo, you get 91 miles coverage to sea level.
http://home.att.net/~wittenberg/radar/calculators/horizon.htm
Assuming you are picking up sites in the Sierras, the range can easily be 200 miles.

I find the QRM on Diablo to be pretty bad, mostly around 2 meters. UHF scanning their works pretty well. With binoculars, you can see the large cargo planes land at Travis.

There is an East Peak at Diablo which might be marginally better for scanning. It seems to have mostly microwave equipment on it. Park at the "Devil's Elbow" and take a short hike to the other peak.

They can and do use this ID if there system is down or there is some type of problem. Pleasanton PD and Livermore Pleasanton Fire have the same capability. 64016/64304. I have heard all three use it.

By virtue of the California terrain, Mt. Diablo provides usable radio signals to more surface area than any other radio site in the country.

Mt. Diablo interference to radio systems in Bakersfield on VHF-Hi and UHF is not unknown during periods of ducting.

If they operate the same way the Marin Sheriff's Departments boat does they
use the standard Sheriff frequency and in addition the marine frequencies.
It would not be feasible to set up a separate frequency for just those
units I think.

I spotted this ugly unmarked police car in the Fremont Fry's parking lot today:
http://www.lazygranch.com/images/may2002/frysum1.jpg
Here is a close-up of the clipboard:
http://www.lazygranch.com/images/may2002/frysum1.gif
I like the first entry, which indicates they are using a green Volvo for surveillance.

Yes, there was a shotgun inside.
No, those are not scratches on the window, but rather the reflection of electric power towers.

Depends on what part of the Delta you are talking about. The San Joaquin County portion, which is the biggest part of the Delta, is patrolled by The San Joaquin County Sheriffs. There freqs are:

Tac 1 Dispatch: 460.125
Tac 2 Dispatch: 460.350
Tac 3 North: 460.225
Tac 4 South: 460.475

Then are mentioned over the radio by "Boat ---." --- being the boats unit number. I volunteer for the San Joaquin County Sheriffs Search & Rescue, Delta Division. I'm the Communications Director on the Command team of any search. I run with the Sheriffs boats all the time throughout the summer. Any other questions you can direct them my way.

Thanks
Eddie

Here's a shorter link:

http://www.scannermaster.com/store/13-540456.html

This looks very close to one that I have seen from Grove:

http://www.grove-ent.com/ANT9.html

... which also looks suspiciously like one I got at Rat Shack:

http://www.radioshack.com/searchsku.asp?find=20-043

I like the RS one, and am not sure how I'd tell if it were better or not
than the ones costing $30 more.

What the difference in performance with a ground plane?

There are things that I can barely get that I'd like to receive better;
would a yagi help if I knew which direction to point it in?

Napa SO has 2 boats on Lake Berryessa and their call is Boy 1 and 2. They monitor their freq along with Channel 16 - Marine for emergencies.

San Francisco Police has 3 boats. they are SFMARINE 1 , 2 , and 3. I don't know their call signs on the 800 freq. SF Marine 1 is a old Coast Guard 47 foot Motor Life Boat. I'll upload a pic of it to the Bayscan Picture section

When I was regularly boating in the Delta, the San Joaquin S.O. was also on the water. Suggest you monitor Marine channel 16 (if you can stand hearing all the jerks asking for radio checks). Thats where the S.O. units would normally contact Coast Guard Rio Vista. CGRV normally advises them "skipper, switch and answer channel XX" to conduct business. Last I knew, the S.O. units were not authorized to transmit on actual CG frequencies.

Channel 16 is where all the frantic boaters call to report their problems to the CG.

Palo Alto PD once responded to the PA airport and took a naked man into custody. The sgt apparently dispositioned the situation as a possible 5150 and had a female officer drive the guy to Stanford Hospital.

Officer: [unit #] 10-8 enroute to Stanford with one male in custody.

Sgt: [unit #], did you give "X mileage"?

Officer: Negative, he's in the back of the car, I don't feel threatened.

Sgt: It's for his protection, not yours!

From: John Smith
Topic: 11550 Message: 11550

Can anyone direct me to a URL with a photograph of a Yagi antenna?

A friend in Berkeley who lives in a place which has what might be a Yagi on the chimney. It consists of a single rod pointed parallel to the horizon. Skewered on the rod, along the axis (and perpindicular) are a series of same-sized thin disks. It might look like this in silloutte: M--+-+-+-+-+- When viewed from the end it would look something like this: O

It very much seems directional. It seems old (70's?). This is near the BART/Gilman overpass and it's difficult to tell where it's pointing, but it could be pointing at either campus or city hall. What might this have been used for?

>used for?

That sounds like a yagi. FYI, TV antennas are good examples of yagis
but being off-air TV signals are horizontally polarized the antenna is
mounted that way.

See here for LMR antennas:

http://www.antenex.com/prodinfof.htm

You'll see where to click.

Here's how to build one for 2.4GHz in a Pringles can:

http://www.oreillynet.com/cs/user/view/wlg/448

You're right, it would be very directional.

Wish I would have seen it before you pulled it off the server. I
wouldn't call this blue Ford sedan an undercover (unmarked) patrol
car. First thing I notice is the CA exempt license plate - dead
give away of an official CA gov't vehicle. If the person using this
vehicle was stupid enough to leave compromising info out in the
open, than so let it be...Its not like you over heard a privilege
conversation, or reported on something you might have heard on a
cell phone (heaven forbid) - sounds like some officer might need
more training on the handling of sensitive material!

Later,
Todd

I have asked ex-military members about secrecy, and it is the responsibility of the person possessing the information to keep it secret. This includes giving out information over radio.

Just like you shouldn't post photos of the Area 51 camo dudes on the net because they lose their job once exposed, I yanked the photo so the person who left the information out in the open does not get in trouble.

I built a few 2.4G antennas for er um off-the-air er um recption of er um amateur TV. Yeah, that's it, amateur TV. I found at those frequencies, you really couldn't build a decent antenna with many elements because it was hard to control the dimensions. Anything I put in front of the coffee can antenna was worse than just using the coffee can by itself. Reading the link you provided, it looks like the using the basic cavity resonator antenna and a parabolic dish is the way to go. A dish antenna is not tuned to a particular frequency, though it's adherence to critical dimensions is related to the wavelength of the frequency to be received.

Here is a somewhat related link:
ews.bbc.co.uk/hi/english/sci/tech/newsid_1639000/1639661.stm

11567. Berkeley FD dispatch troubles

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-17 01:02:54 UTC
From: Jordan Hayes
Topic: 11567 Message: 11567

I was mobile earlier, and there was a fire up near Grizzly Peak. I was getting a LOT of interference on BFD Dispatch (154.19MHz) and the dispatcher came on at one point and moved everyone (except for the command at the fire) over to channel 2 (154.43MHz) because she couldn't get consistent transmission. It sounded awful in the truck, but when I got home and listened on my -780 it was totally quiet (i.e., no problems; when the guys at the fire scene were transmitting, it was fine).

Hummm.

Fire is out, FWIW. A friend's father lives down the block and says about half the house was destroyed. 5 units plus a command unit were there.

/jordan

From: robert sanford
Topic: 11527 Message: 11569

In regard to this issue here is what I think.

First of all this information was only sent to a SMALL group of people in the Bay area (namely the members of Bayscan) This list is comprised of people who many of are either involved in dispatching, the Press or law enforcement in some manner, also people who volunteer hours to groups like RACES and ARES as a public service.

I don't think there are any unscrupulous people on the list namely, meth manufacturers,
drug dealers, people with outstanding warrants, etc etc.

I am very vigilant about checking people out before adding them to my list. I don't just add them without finding out a bit about them first.

If this information was of a sensitive nature it should not have been attached to a clipboard in "plain view" of anyone walking by the vehicle??

Nobody's safety was compromised by Gary's picture being posted on here.

I don't want this thread to go on and on but I just don't think its a big deal. I also wanted to throw my "2 cents" in.

Sincerely,

Robert
BayScan List Manager

An interesting thing about cyanide is a large percentage of the population can't smell it unless you posses the right gene. If you can smell it, it has a kind of bitter odor.

There are abandoned cyanide pits around the west, as the chemical is commonly used in leaching gold from ore. Here is a photo of one abandoned site:

Due to the location of this fire which was on the
crest of the Berkeley Hills they stayed on Berkeley
One and activated the Tilden Park repeater so dispatch
could moniter the situation. About twenty minutes into
the roof fire as it was in the process of going to a
second alarm someone in the fire building had an open
mike for about 15 minutes. A melted PTT button?

11578. RE: [bayscan] 800 Mhz antenna

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-17 16:26:45 UTC
From: gary
Topic: 11574 Message: 11578

The problem with that 800Mhz antenna is it's small aperture. While it may be tuned to 800, it doesn't have enough metal in the air to gather much signal. Think of the RF field as volts per meter. If you don't have a large physical size (i.e. the meter), you don't gather much of a signal. Note that the gain of a small antenna can be very high, but that gain is just a comparison to half wave vertical (if in db) or an imaginary isentropic radiator (if in dbi). Gain is the same as signal strength, though they are related.

Antenna aperture is analogous to using a larger lens in photography. For instance, compare two 400mm lenses, one F4 and one F5.6. The magnification is the same (i.e. gain in an antenna), but the F4 lens will be much brighter than the F5.6 lens (i.e. signal strength). In the case of a lens, the amount of light is proportional to the area of the front lens, i.e. the F4 lens is a bigger diameter then the f5.6 lens.

To really get gain at those near microwave freqs, you need a log periodic or yagi, i.e. something with much more gain than a simple vertical, or a colinear design that will at least be better than the simple vertical.

I did a google search on "colinear 800mhz" and found:
http://www.ecwest.com sells BB8065C for 800mhz use with 5db gain. However, they sell yagis with gain up to 11db. I'm guess the antenna in your advert is 0db, i.e. just a simple half wave. If you only want to scan SF, then get a yagi. If you want to scan SF and Oakland, the colinear would be better.

11580. Radio authority gets Tiburon property

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-17 17:00:30 UTC
From: robert sanford
Topic: 11580 Message: 11580

Here is that latest in the progress of Marin County securing the last site necessary for the new radio system.

Radio authority gets Tiburon property
By Richard Halstead

The Marin Emergency Radio Authority acquired a controversial site in Tiburon by way of an eminent domain proceeding Wednesday - just two days after its board authorized the action.

By acquiring the site, which was owned by the Marin Municipal Water District, the radio authority believes it gains the power to erect a 73-foot public safety radio antenna there, despite the town of Tiburon's opposition. In 2000, the Tiburon Planning Commission unanimously rejected the radio authority's request for permission to build on the site.

By the time the Tiburon Town Council met in closed session Wednesday night, Marin Superior Court Judge Vernon Smith already had approved the condemnation. The Marin Municipal Water District agreed to sell the property at 99-½ Mt. Tiburon Road without a fight for $160,000.

"We were surprised they got possession so quickly," said Tiburon Town Manager Alex McIntyre. He said the radio authority has indicated it could begin construction of the new antenna by the end of this month.

Tiburon's Town Council had planned to discuss whether or not to attempt to block the eminent domain proceeding, McIntrye said. He said he believes Tiburon still could challenge the condemnation retroactively. He suggested, however, that it might only delay the inevitable for about a month.

"At this point we're still exploring legal strategies," McIntrye said. "My general sense of the Council is that we will exercise our right to regulate land use - we will always exercise that right," he added.

Months behind schedule and about $1.4 million over budget, the Marin Emergency Radio Authority is struggling to secure the last antenna site crucial to a new $26.9 million countywide public safety radio system - before high overhead costs kick in at year's end.

If the project's completion is delayed beyond the end of the year, equipment manufacturer Motorola will begin charging the Radio Authority $35,000 to $50,000 a month in project overhead costs, said Martin Nichols, the radio authority's executive director.

The longer the project is delayed, the longer $12 million worth of electronic equipment has to be stored in a warehouse, and the longer Motorola has to keep its project staff assembled, Nichols said.

Now that it owns the property, the radio authority said it can do whatever it wants with the site.

Under California law, "One unit of local government is exempt from the planning regulations of another one," Nichols said.

Tiburon attorney Ann Danforth disagrees with this interpretation of the law.

"This is patently untrue," Danforth wrote in a letter to the Radio Authority's board this week. "The California Government Code sets forth very limited types of agencies and uses that are exempt from the land use regulations of the local jurisdiction. Joint powers authorities are not one of the classes of agencies so named, nor are radio antenna one of the uses," she wrote.

It could prove expensive, however, for Tiburon to challenge the radio authority in court. On Monday, the authority's board altered its Joint Powers Agreement so that it may boost the fees paid by any member of the authority whose actions increase the cost of building the system.

It is conceivable that Tiburon, which is one of the authority's 26 members, could be forced to pay for any legal expenses the authority might incur defending itself from the town.

Regardless of what the town does, however, a legal challenge is expected from residents who live near the site. Neighbors, some of whose property lines are less than a dozen feet from the site, are worried about the effects that radio frequency radiation might have on their health. They have vowed to fight.

"As God as my witness, we are the most implacable foe you have ever come up against," Mt. Tiburon resident Howard Zack told the radio authority's board Monday.

Zack and other neighbors leading the fight against the antenna could not be reached for comment on what their immediate plans are now that the radio authority has acquired the land.

Im actually just using the stock antenna in the back of it at the moment.
I have tried my ground plane on the roof and I don't get better results
probably due to the loss from the coax. The signal is not bad but I would
like to improve it to the point where the "white noise" is gone however.
Hell Im just happy I can receive SF now since when I lived just on the
other side of the same building I couldn't get it with ANY antenna. That
just demonstrates how weird 800 Mhz is.

Robert if you are concerned with increasing a paticular signal I would go with an 800Mhz Yagi pointed to the SFPD repeaters, You can get up to a 12dbi-3.dbi Yagi's from Antenex. Your signal quality would be greatly increased, I use these and they work great and hold up well to the elements. Difference betwen silver or gold series is gold have welded elements and anodized are gold, while silver have bolted elements and are anodized silver.

If you need more info let me know directly.

They Are at the following locations:
1) roof of B of A bldg., Kearny & California (about 780')
2) Bernal Heights
3) Webster & Sacramento
4) Jones & Clay
5) Central Radio ((1003 Turk))
6) Embarcadero Station (# 1 Market St.)
7) Forest Hill ((west of Twin Peaks)
8) Fort Miley (42nd Ave near California)
9) Hall of Justice - 850 Bryant
10) McLaren Park (South part of town, near Cow Palace)
11) Muni underground / market St. subway
12) South Hill (Daly City)
13) Sutro Tower

Obviously, Sutro tower would be the highest point with the one on Bof
A probably the next. The one on B of A is probably the one that I can get
from the peninsula from time to time.

I have a Channel Master Antenna and it works great I did pickup S. F. P. D. when they used lowband and Sacramento P. D. when they used Uhf 460 MHz I'm in Concord and I can pickup SF muni lowband 31.1400 the only thing is that it doesn't work to good in the 900 MHz but the one at Grove covers 25 to 1300 MHz. http://www.grove-ent.com/ANT7.html hope this help

11607. Florida Highway Patrol Camaro's

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-18 18:44:06 UTC
From: robert sanford
Topic: 11607 Message: 11607

The Florida Highway Patrol recently displayed its brand new 2002 Camaro patrol car at the Miami-Dade County Fair and Exposition where more than 850,000 people visit over a two-week period.

There was a segment on CNN today about these cars that are capable of reaching speeds in excess of 140 mph!!! They said they were necessary to catch speeders on the highways down there.

I posted two pictures of them here:

http://bayscan1.50megs.com/fhp1.jpg

http://bayscan1.50megs.com/fhp2.jpg

11608. ACFD wide/local help?

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-18 19:46:31 UTC
From: mikesrvca
Topic: 11608 Message: 11608

Anyone have info on which ALCO Fire tac channels are on the wide system, and which are on the local. I live in San Ramon, and I can only hear wide, and when they're doing stuff on the local it locks up my scanner.

Thanks,
Mike

you can only do SO MUCH with a 42 Mhz antenna and have it still work halfway decent!

11616. Re: Florida Highway Patrol Camaros

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-19 01:25:30 UTC
From: reno_huskerdu
Topic: 11607 Message: 11616

Current Camaros will reach speeds of over 160 mph, if properly equipped, right off the showroom floor. Firefighters, EMTs, and Paramedics generally dislike these cars because they so often wind up in fatal wrecks that require extensive extrication work. Lots of power, inexpensive, appeals to youth element, but not very survivable in a wreck.

11618. Kelty Books

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-19 02:13:38 UTC
From: James Thomas
Topic: 7398 Message: 11618

I was wondering what the consensus was on the Kelty books. Are they accurate, both with frequencies and tones? I've noticed a few mistakes on the Yolo County and Sacramento County pages, but can't confirm the bay area frequencies and beyond.

James

I saw him (Kelty) at the flea market on Footill Campus last weekend.
They happen every second Saturday of month. He was selling his
manuals for $5.00 each!!!!!!!! Dummy me didn't have any cash.

Bob's data is very acurate. If you find data that is in error
(other than maybe a naming or format convention) he is interested
in the updates.

He lives in the south bay, so the Bay Area data particularly is good.

FYI, the $5 books had screwed up covers, something like the cover said Central Valley but inside was the Golden Gate. I think they are $20 in stores and $15 at the flea market.

If you have a correction, give him a call.

Few comments on this Kelty thread:

One, people, check your computer dates and times. I'm seeing posts from 2001!

Second, as much as I think Bob's work is great, remember, there's also the 'free' data you can find via a few searches online. And also, remember, data cannot be copyrighted. That's why the phonebook is free. If I were to scan Bob's book, as long as I changed SOMETHING, (i.e. if he uses Times New Roman, as long as I change it to Courier), I'm 100% legal. Data cannot be copyrighted. The format, however can. I could scan the phone book and put it online, and there's nothing PacBell could do.

Now I am NOT saying pirate his book, nor am I saying anyone should put it online, just stating some facts.

I haven't checked lately but most all of them (2-6, 8) should be setup
for WIDE. I show TAC 7 as LOCAL but that entry hasn't been updated
since they expanded the system. I can only confirm both Dispatches and
TAC 2 at the moment.

Bob Kelty puts out good information. Remember, not all
systems are implemeted as applied for. Also, you need
to check the date of the book. You need to work off
the most recent edition.

While thumbing through the frequency book for a local private ambulance company I found it included several pages from Kelty's book along with the official radio plans from local government agencies.

That's not precisely correct. Lists of data can be copyrighted using a compilation copyright. Also (for those of you who don't know), it is customary to insert some odd items of information into data books so that if someone just copies it verbatum into another book or web site (or whatever), the odd items will indicate the original source. Map makers often add a false town, or tweak a curve or two in some roads. The brewery list in "The Celebrator" has a long dead microbrewery in Nevada at a false street address.

11633. OT: Kelty Books and Copyright

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-19 14:57:00 UTC
From: Scott Baldwin
Topic: 7323 Message: 11633

Thought I'd throw my two cents in here.

First, the phone book is not sold. It's free. You can get them at the grocery store and it doesn't cost you a thing. So making copies of it, then posting it on the net would be okay. As for information; things like chemical equations, historical events, and those items cannot be copyrighted, because they are considered common knowledge, and within public domain.

Robert Kelty however, can definitely hold a copyright on intellectual property. While copyrighting the specific format can be subject to debate, the actual contents can be held under a copyright. The reason for this is that the frequencies for any such agency is not considered to be public domain, not common knowledge. He designed the covers for his books, and his personal time is used to compile these lists.

With that in mind, you couldn't take the electronic format of his books, add a few bogus entries, then post it to the net. Nor could you change the fonts and consider it "yours". What you could do, is spend hours on end, listening to your scanner. When you actually hear a signal, thus confirming the frequency, you can then add it to your own book. You can also do what the guys that run the Industrial Radio publication do. They use the Kelty format to list the frequencies, but they rely on public input. Doing that, it would be suggested to archive the submissions, just in case a law suit for copyright infringement is brought against you.

I know this is really an off-topic message, hence the subject line.

This is a good example. The company that prints the books for Radio Shack holds a copyright, and they even say their listings contain false information just for the reason you stated.

Where does he sell the books? And what are the dates of the locations
he's
going to be at next? I'd be willing to make a drive if I can pick up some
of the more recent stuff.

I know he sells at Foothill College. Where is this? And the dates and
times?

Thanks in advance

Scott

El Monte Road, west of 280. (or is that considered south?) 12345 El Monte Road, Los Altos Hills.

Happens 2nd Sat of month. Not sure of exact times, but starts early in morning.

Foothill Flea Market URL:
http://www.electronicsfleamarket.com
No guarantee any specific vendor will be there any specific day.

Kelty books also stocked at Sunnyvale HRO.

Kenton is right on target. I worked for many years at a map publisher and every single map that was produced contained a 'trap' to discourage illegal reproduction. Usually these traps were in the form of a small non-existent body of water, but there are many other types, too.

Cheers!

Craig

Exactly. I've caught a couple of Gene Hughes' "errata" in several books. I know he places them there specifically for catching those trying to infringe on his copyrights.

No, I'm not going to tell you what they are...

Foothill starts precisely at oh-dark-thirty and is effectively over by 9am.
Bob will sell you a book at the Livermore flea market if you call
408-269-5814 to make arrangements. He doesn't normally vend at Livermore,
just shops. HRO has the books too, but it is best to buy direct if you want
the latest copy.

Livermore flea market is the first Sunday of the month, 7AM to about noon,
rain or shine, at Las Positas College.

That's what I had said, in a nutshell...

> Robert Kelty however, can definitely hold a copyright on
> intellectual property. While copyrighting the specific format
> can be subject to debate, the actual contents can be held under a
> copyright.

If that were the case, and I'm not sure since I'm not an attorney,
but couldn't the FCC sue Kelty AND radio shack? What's to prove Kelty
didn't get his data straight from the FCC?

> The reason for this is that the frequencies for any such agency
> is not considered to be public domain, not common knowledge.

Not really. If I walked into Palo Alto Police's Admin office, I could
ask them to see their FCC license. KMA471. I could then log onto the
FCC's web site, and reference KMA471, and see all their frequencies.
Frequency data is more or les public knoweldge. You just need to know
how to ask.

> He designed the covers for his books, and his personal time is
> used to compile these lists.

I'm not debating that...

> With that in mind, you couldn't take the electronic format of
> his books, add a few bogus entries, then post it to the net.
> Nor could you change the fonts and consider it "yours".
> What you could do, is spend hours on end, listening to your

> confirming the frequency, you can then add it to your own book.

Not sure if that makes sense, in court it would have to be proved
that I didn't simply scan the books. I'd be curious if there's an
attorney online willing to comment on these...

I really doubt Bob would have a coronary if you made a copy or two out of one of his books. Two, even if I did, I am NOT worried about the Cops kicking in my door LOL. You cannot take the computer anywhere, yeah if you have a laptop, but his books are much easier to pack etc if your on the road. In addition the FREQs, you have unit identifiers etc so you can tell who 18X1, 25S4 is etc. I will be in Sacramento in a few days and will take his book for that area with me, even though I have Sac in my software for my 780s and will download it into the scanners prior to leaving. He also has a quick guide, kind of like a notepad with Bay area FREQs. $16.96 At Scanners Unlimited.

... for a few days anyway. Pretty good rain so far today, and 70% chance forecast for more tomorrow. Guess we'll have to settle for car crashes and police activity. ;)

Anybody else catch that hot pursuit today at 0900 in Livermore? Perp tried to outrun cop. Cop has Crown Vic with V8, perp has Honder with fart pipe. Perp rabbits in his car, but cop keeps up. After a few minutes in res areas, perp stuffs Honder into parked car, then rabbits on foot into park. But cop keeps up again, on foot. Cop sounds damn winded on his portable though, and presses 10-99 button, for code 33 on main. About 3 later, code four, code 34, 10-15, solo arrest. Sounds like a good cop, unit 106 I think. Quite the calm start to his Sunday morning shift, eh?

Ed:

What is 1000 Pine? If this is the address, wrong. That either station 4 or 5.

The incident your mention is by the Fremont Hub.

Nope. They clearing, several times, said 1000 Pine which IS station 4 (I just double checked Fremont Fires webpage.) Plus they clearly, when dispatching Battalion 1 , Truck 7 and Engine 3 said "Right in front of Station 4." How far its from the Hub, I don't know.

VALLEJO POLICE INVESTIGATE HOMICIDAL DOUBLE SHOOTING

VALLEJO (BCN)

The Vallejo police report this morning that homicide detectives are interviewing witnesses to a Sunday night double shooting that claimed the life of one man and sent another to the hospital.

According to Sgt. David Hoen, officers responded at 10:39 p.m. to a report of shots fired in the 300 block of Reis Avenue, where they found two victims with gunshot wounds.

One of the victims, identified by police as Michael Shamrock, 34, of Vallejo, was taken to an area hospital where he is expected to recover.

The second victim, a 35-year-old Vallejo man whose identity is being withheld, was pronounced dead at the scene, according to the authorities.

From: Evan Platt
Topic: 11681 Message: 11682

There's two TV shows of interest to use ScannerHeads.. :)

Tonight, 10PM PST Channel 2 news:
A segment on "San Francisco's Busiest Fire Engine Company".

Tonight, unknown time, TLC: Code Blue: A segment on air ambulances. There was a promo shot I saw where the camera passed by the chest area of one of the flight nurses. I coulda sworn it said CALSTAR on the patch, but not sure. If anyone catches this, let me know, I'd be curious if the air ambulance featured is us or even local!

Also, later tonight, I'll be posting some pictures of my car radio setup. The term "From DC to daylight" takes on a whole new term. :)

There is a "Klez" virus and its variants out there that apparently grab your email address from somewhere, then send mail to people you don't even know. That email is infected and looks like it's from you, but it's from some other computer.

In my case mail was sent to at least two unknown parties at 2AM when I was sleeping and my computer was turned off (in our locked private home). Yahoo tech supt was worthless and apparently don't care about people impersonating their users. I checked my computer and it does not have the Klez virus (or any virus).

So net/net, there's not much you can do about this one. Your email address got grabbed somewhere else and was used to impersonate you. It's not your fault or your computer's fault.

Station One is the busiest. Station Three comes in second. Station Thirty-Six also does pretty well for themselves. The least busy is Station Forty-Eight.

(Just read the Budget Auditor's Report a few weeks ago)

From: Evan Platt
Topic: 11666 Message: 11690

From an ISP's standpoint, there's not much Yahoo tech support can do. You'd need to find the ISP of the person who 'sent' the virus. Especially with a worm like that which probably picks a random address, no one except the writer of the worm / virus is to blame. Let's say you have the e-mail address abcdefg@... . Now:
Bill VirusWriter writes a virus that pretends to be from <random string>@....
Bob Enduser in Florida downloads the virus, and runs it (unknowningly). The virus sends itself to all the people on Bob's address book, and pretends to be from <randomstring@...>, and this time picks abcdefg@.... There's not much yahoo can do, since their service technically isn't involved. They could have been a tad more compassionate (if I got a tech call like that from one of our users, I'd HOPE he wouldn't hang up thinking "God, he's useless" but more like "now I understand." For them to have pushed you off like that is pretty bad, but true, in a sense, there's not much they can do short of being compassionate.

If you've ever wondered what you're doing, flying donuts over Pt. Reyes for longer than you can stand sitting in your seat, tune in to Oakland Center right now on 125.85 and listen to this guy hand out 45-60 minute "fly around in circles" clearances because it's rush hour at SFO!

We already do this after the Livermore swap meet. Sometimes Kelty will give you stuff not in the book. Unfortunately, this does conflict with the Norcal QRP club meeting.

Speaking of stuff that is not published, San Jose has plenty of secret freqs. You occasionally hear a reference to the BAT radio. BAT stands for body audio tap, but San Jose uses a portable repeater for surveillance on the mystery BAT freq. There is also a street crimes group on bicycle that has their own set of freqs, all simplex. Unfortunately, you have to be on-scene to hear this stuff.

I used to have the freq for the Los Gatos/Campbell narcs, but it got lost during a PC "upgrade". ;-) It was a commercial UHF freq.

Then there are the Palo Alto narcs who borrow a local commercial trunked repeater system at night.

Yeah I was thinking the same thing :)

For those of you that didnt catch the show a kid that
got in a motercycle accident had to have his testicle
repositioned OUCH....
But yes if I had to have that done I cant think of a
nicer Dr to do it then her :)

AH so you were the culprit :)
I was getting that KLEZ virus stuff but could not trace it back to the source.
I knew it was someone who had my address in their e-mail program but there
were too man suspects to narrow it down....
Glad you got it fixed. Do you know how the hell you got it?

I NEVER OPEN ANYTHING FROM ANYONE if it is an exe. or file I cannot
determine what it is..

Yeah, but "da word on da street" is that there are two BAT freqs, VHF and UHF. I think the VHF freq is 159.xxx, but I've never been near enough to find out.

About 9 years ago, I heard a body tap on 154.68 (DOJ). The UC was buying dope from some xMA in Milpitas. Actually more like just setting up the deal.

Here is a blurb on the street crimes unit:

From: Pam & Jeff Schiller
Topic: 11704 Message: 11710

Well no Im not sure how I got it but funny thing was I had just done a full scan with Norton then I checked my E-mail and all hell broke loose.......the only message I got from snow crest was Jason Wallace in Redding (not blaming him he seems like a cool guy) but I was wondering if snow crest knew it was there from there sender why didn't they take care of it? Im so naive on the hole virus thing that's why we have virus programs right>? anyway problem solved I hope

From: John Smith
Topic: 11705 Message: 11711

Forgive my ignorance, but if the body mic transmits in TV ranges isn't there
a risk that people watching TV in the vicinity of the mic might hear it?

If I were in charge of something like this I'd broadcast snow on my freq
except when I were actually using it. Scanners would have long prior locked
that freq out. Cheap and easy.

That'd be an idea, however the body mics and bumper beepers only transmit about a half a watt (often less). So the only time you'll hear anything on those frequencies is when they're in use. And remember, unless you have a 30-40 watt repeater on the top of Mt. Diablo, there's no way to 'broadcast' snow on the frequency 24/7. Plus I think the mikes broadcast on the video frequency (TV audio and video are on two frequencies), so by broadcasting on the video portion, people would have fine audio, but notice bad video (think trying to watch a pay per view channel without a descrambler). So true, it's an idea to broadcast snow, however not without a high powered high altitude reciever. And then how do you turn off that transmitter?

Evan

From: John Smith
Topic: 11705 Message: 11716

Well, one could use a high power transmitter for two hours of noise prior to turning it off and switching to the mic.

I just wonder about all the frequencies I've locked out because there was apparently random static on them. Once locked out, I very rarely revisit them, and I suspect that's true of all of us. That being the case, it seems like one way to inexpensively conceil a freq.

BTW, I tried to plug the "unpublished" bat frequency into my 780 and found that it was a duplicate. Apparently this frequency is supplied to anyone downloading SF local freqs from the Bearcat site. Doh! It doesn't matter though -- that means it's been in my 780 for about a year and I've never heard anything on it.

Everyone lost the idea of my original post. SJPD uses the same BAT frequencies for handheld radios, probably in the 2 watt range. Those should go some distance. These are not body audio taps. Also, there are the street crime portable units that have another set of freqs.

They program the transmitters so they can transmit on TV frequencies
that aren't in use in your area of operations, specifically for the
reason you mention... not just to deter eavesdropping, but to avoid
being interfered with by the much more powerful TV transmitters. The
odds of someone watching a TV channel that's not in use locally are darn
slim...

look at http://www.audio-technica.com/using/wireless/index.html for instance - they're more for non-surveillance activities but they have an app that wil help buyers locate "good" frequencies for their area (by zip code);

also browse thru http://www.aegi.com/store/covert_devices_bodyworn.htm

Yeah, but "da word on da street" is that there are two BAT freqs, VHF and
UHF. I think the VHF freq is 159.xxx, but I've never been near enough to
find out.

About 9 years ago, I heard a body tap on 154.68 (DOJ). The UC was buying
dope from some xMA in Milpitas. Actually more like just setting up the deal.

Here is a blurb on the street crimes unit:

Not exactly a Law show specifically. We had Coast Guard and Fire out to test systems also. Don Root was there from State OES and I was there from SF OES. It went very well. I'd never talked on CALCORD or NALEMARS before. I actually gave the best duty of my group to another couple of ACS guys who were out on the 47' CG vessel. The multi-agency doughnuts and bagels were excellent!

Bundy

From: Tim Tribble <tcomm_specialist@...>
Subject: Re: Drill

That would be the Golden Gate Communications Interoperability Test that is going on today. Should be interesting litening. Since it's a Law show, I have no frequency information.

11734. Bridge OKs anti-war protest

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-22 17:21:28 UTC
From: robert sanford
Topic: 11734 Message: 11734

It might be worth listening to these frequencies on Saturday to see what happens with this scheduled demonstration:
Bridge Operations-482.7375, Marin CHP-42.160, Marin Sheriff-39.240, Park Service-418.950,419.625,419.825,417.675,418.225,

Bridge OKs anti-war protest - without signs and bullhorns
By Mark Prado
Plans for an anti-war march on Saturday across the Golden Gate Bridge ran into a snag when span officials told the demonstrators to leave their bullhorns and signs at home.
Protesters also were told they had to be done by 2 p.m. so they wouldn't worsen already heavy weekend bridge traffic.

"They are turning our expressive event into an unexpressive event," grumbled Matthew Willis, secretary of the Oakland-based All People's Coalition to stop U.S. Terror and Occupation, at a press conference at the span yesterday.

Bridge Manager Kary Witt said the limits are to maintain safety and order on the span, not quash free speech.

"We want to allow people to express their views but, at the same time, make sure that everyone who will be out on the bridge that day, from motorists to tourists to bicyclists, have the equal opportunity to have a safe and enjoyable experience," he said. "We are able to accommodate both, as long as everyone abides by permit conditions."

The loosely knit All People's Coalition is an anti-war group that has called for the United States to leave the Middle East and for the end of U.S. financial aid to Israel. It also supports Palestine's right to exist.

Event organizers initially wanted to hold a rally at Crissy Field in San Francisco at noon, then march over the bridge at 2 p.m. But bridge officials said the group could cross only if it was done by 2 p.m. Also, bullhorns and placards or banners cannot be used on the span. As many as 1,000 people, wearing "Stop the War" T-shirts, are expected at the event, organizers said.

"Bullhorns can distract motorists and it is the same with signs," Witt said. She also said that extra bridge security will be deployed for the event.

Event organizers say they will cross the bridge at noon and leave their signs behind, but they are not happy.

"If people walk over the bridge at 2 p.m. or if they are carrying signs they are risking arrest," Willis said.

He said the span is the perfect stage for the demonstration.

"There is a growing anti-war sentiment. People have the right to dissent and I think people are afraid to do that right now. And part of that is why we are choosing this symbol - the bridge."

The CALSTAR helicopter from Concord will be at the festival from 11:30 to 3pm (both days) at the north end of the park behind the fire station. Landing Zone coordination with Coast Guard will be on one of the marine frequencies. I'm not sure which frequency as of yet. Also be sure to come by our booth shared with the Coast Guard at the south west end of the park in the parking lot.

-Chris.

These people are not anti-American, they are Pro-American. Unlike you, they remember what this country once was all about and want it to be that way again.

If you don't like demonstrations, then don't go to them. Do as you like but give others the same freedom to do as they want.

To wish death to people who still believe in the dying first amendment clearly reveals your severe need for therapy. If you can not afford to refill your Thorazine and Prozac prescriptions, post the cost and name of your pharmacy and I will send them a check.

From: Harry Marnell
Topic: 11734 Message: 11745

I was agreeing with the idea behind this post, until I got to the "need for therapy" stuff. There went your credibility.

I too have a problem with folks who suggest that people should "enjoy your first amendment rights by NOT exercising them." When thousands of folks protest peacefully and a handful do damage or cause injury, it unfortunately reflects on the whole group.

To disagree with something our government does is certainly not being "Anti-American." Neither is expressing such disagreement. Isn't THAT right to expression one of the things that so many have given lives for? If someone breaks the law, deal with them swiftly and appropriately, but don't knock the head of the guy next to him, who is acting peacably and legally.

IMHO

Geeez if I knew I was going to start some debate here I would have NEVER posted the information about the demonstration on the bridge tomorrow.
I don't mind a little debate going on and often chuckle at some of the posts but the majority of the list gets "pissed off" at me for letting it occur.
On the other hand I don't have the time or feel that this list should ever be "moderated" so when something like this occurs I think its good Internet manners to just respond to the person you don't agree with and go on as much as you would like to "off list".

My medication is very expensive. Your generousity is humbling. I hope I can repay you some day. Simply make out your check to "HRO pharmacy" in the amount of $10,000 - that should cover a month's medication for me. I'm also accepting donations to the "jam KPFA's transmitter" fund - large denominations only please.

Thanks Ben. I will see if I can get a positive ID on this agency as I hear them quite a bit as they compete with SJPD on this frequency.

11759. Re: [bayscan] 460.050 RESOLVED - NO INCIDENT - EXERCISE YOUR MIND

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-23 20:02:42 UTC
From: John Smith
Topic: 11759 Message: 11759

Yesterday I was scanning along and came across SF Sheriffs office telling a team that everyone had been evacuated except one sheriff's deputy who was dead and an infant who was seriously injured. The emotions behind the voice didn't quite seem real, even considering professional detachment, so I figured it was a drill. Then it was disclosed that one inmate was still missing, apparently the building was on fire, and the inmate was described as mentally challenged and a full description was given (name, height, weight, etc), and that seemed pretty realistic, so I quickly scanned the SFPD and SFFD and the other jail frequencies, but everything was normal there. There were no sirens in evidence and nothing appeared on the news.

I just decided it was another alien cover-up conspiracy. They happen all the time. <grin>

People who torch cop cars and otherwise destroy property should have
their butts locked up.

People who try tp prevent others from exercising what little is left
of the Bill of Rights should be in the next cell.

SJ11 is often used for training by the SJPD academy, as well as for dispatcher training. You probably heard the academy...

The best one I've heard from dispatcher training:
Dispatcher: "415, report of a man and a woman fighting at the Taco Bell located at [somewhere]."

Dispatcher: "Update on that 415, the man and woman are fighting over a chalupa."

Dispatcher: "Update on the 415 at the Taco Bell, the woman's wig has fallen off. Apparently they are both males."

11763. FCC Releases Major changes to Part 90 rules

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-23 21:53:03 UTC
From: Ed Tobiasz
Topic: 11763 Message: 11763

The FCC released today, a Memorandum Opinion and Order
and Second Report and order (FCC 02-139).

Changes include:

1) Multi-Use Radio Service (MURS)

Affirmed decision to license by rule five VHF
frequencies licensed under part 90 and moved them to
part 95.

Declined to limit use to Industrial/Business CFR Title
47 Section 90.35 eligibles.

External antennas up to 6.1 M (20 feet) above a
structure or 18.3 M (60 feet) above ground, whichever
is higher are now allowed.

Allow 2 watts Total output power instead of 2 watts
ERP.

No repeater use will be allowed.

2) Dockside frequencies

Revised power limits on certain frequencies currently
reserved for low power operation on a primary basis
for cargo handling purposes at docksides.

3) Public Safety Pool Eligibility.

Eliminated eligibility restriction on school and park
operations in the Public Safety Pool (CFR Title 47
section 90.20)

You may download an Adobe Acrobat copy of this
document from my web site by going to

That's a great one, Brad.

As for this being SJPD--definitely not. The signal is very weak and their is a pronounced tone at the close of each transmission. I'll keep on listening and see if I can grab an ID.

Cheers!

Craig

That's a great one, Brad.

As for this being SJPD--definitely not. The signal is very weak and their
is
a pronounced tone at the close of each transmission. I'll keep on
listening
and see if I can grab an ID.

Cheers!

Craig

Two thoughts:

1. Portable repeater on the ground in San Jose.
2. Santa Rosa

The others are too far away.

If it helps, I heard two different tones on that freq from Mountain View. My guess is they're both San Jose. The academy suggested earlier sounds plausable.

162.2: Intercommunications between portables? Heard some kind of stakeout.
110.9: Heard talking to dispatch.

Jamming a radio station? And here I got the impression that you opposed acts of terrorism. And with that, no more on the subject from me. Have the last word if you wish.

After a lapse of many years, have decided to renew my tech license. Or maybe General. Reason is to volunteer for emergency services, nets, etc.

Have Alinco credit card dual band, Realistic HT-404 and venerable ICOM U-16. No base units.

Perhaps make contact with someone ar the emergency services facility on (?) Turk St. in SF.

Meanwhile, suggestions on nets to monitor? Only know of 442.100 Tuesdays at noon siren reports.

I may vehemently disagree with what the protestors say, but I will
vehemently defend their right to say it.

Unfortunately, they don't feel the same way.

SJ11 is often used for training by the SJPD academy, as well as
for dispatcher training. You probably heard the academy...

Well, FWIW, they just started a new dispatcher academy class on the 29th of April..

Berkeley PD uses 460.05 (162.2) as "channel 4" and is usually service stuff, checking plates, etc. Not sure why there's no "channel 3" ... 2 is 460.25 and 1 (aka dispatch) is 460.175. There's also 465.175 listed as "TAC" ...

Date: 2002-05-24 07:54:00 UTC
From: wa6ubw
Topic: 11791 Message: 11791

About 5-10 ago an ALCO talkgroup had traffic re aircraft landed on 880 at Davis (San Leandro) and dispo'd call CHP

CHP dispatched unit(s) to scene as 880 at Marina. I heard a CHP dispatcher say "unknown if TC or it just landed". Further traffic indicates a/c on NB right shoulder with person standing in lane of traffic. Hayward FD or PD on scene (most likely FD).

Back to listening to mundane traffic...

Hi Jordan et. al.

Just to clarify why I do not think this is San Jose PD training:

1. Use of codes that are not used in San Jose (10-10 vs. 10-55 for a coroner's case).

2. This type of exercise would be practiced by MERGE, and these folks did not follow the tactical brevity codes or procedures used by MERGE.

3. Last, the vocabulary used during their communications included the terms 'medic rigs' and a call for deployment was coded as 'DELTA, DELTA, DELTA,' which falls way out of San Jose's typical practice.

My bet is that this may have actually been Berkeley as Jordan mentions. I will keep tuned to the frequency to get a positive ID.

Cheers!

Craig

From: merlinw
Topic: 11796 Message: 11796

The Mayors office in San Francisco is thinking about selling the
SFPD Helicopter to save a whole 400K a year. You may remember that
in January 2000, the SFPD helicopter crashed, killing two officers,
since then, Sgt.Dan Linehan, who heads the Air Support unit, has
worked hard to upgrade, and get flight certified it's twin. Now, the
budget people in the Mayors office, feel that San Francisco has no
need for the helicopter, I guess the Mayor called 'Miss Cleo' and
found out that in the future San Francisco will not have any
earthquakes, major fires, major crime, or terrorist attacks.
If however 'Miss Cleo' and the Mayor are wrong, and there is a
major disaster in San Francisco, or some where else in the Bay area,
the helicopter would be invaluable in spotting blocked freeways,
damaged bridges, spotting fires, or aiding in search and
rescue.
Please take a moment and email the Mayor, and the Board of
Supervisors, and tell them what you think about this short sided
budget cut.

Mayor Brown - damayor@...
San Francisco Board of Supervisors - board.of.supervisors@...

Thank You

Merlin Willis,N6OFY, DEC ARES San Francisco

How does a city like San Francisco justify getting along without police copters? I thought they're kind of "standard equipment" in metro areas. Is there something about the topography or ?? that I'm missing?

Harry

Hi Gang,

Just received my new Alinco DJ296, which is a 220 ham handheld radio. This radio receives between 216-249.995 MHz. We know that 220 ham band runs from 222-225 MHz but I'm wondering if there is any voice communications that's worth listening to in the Bay Area between 216-222MHz & then 225-249.995MHz?

Thanks,
Brian

11800. USCG copter 6591

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-24 15:43:04 UTC
From: Jordan Hayes
Topic: 11800 Message: 11800

Just copied USCG copter 6591 (HH-65A Dolphin?) getting instructions from SanFranAir (381.8) to contact "mobile unit TCC3" (repeated several times) on 336.6 ... switched over there to hear them attempt contact but no joy. SanFranAir came on and said the mobile was supposed to be in the vicinity of Novato and maybe that's why no joy. 6591 said they'd try again when they got closer, they were in the vicinity of Oakland. I'd have thought I'd see them fly by (I have a view of that route) but no visual.

Harry, hold your hand in front of you. Bend your wrist forward all the way. Put the back of your wrist up against your forehead, with your fingers pointing forward. Now wriggle your fingers vigorously to collect the orgone rays bathing you from outer space.

That's what's up with Frisco. Too many kooks. ;)

That's square in MilAir range; there are several known frequencies in
use by NORAD (228.9, 235.9, 239.7) in there.

Also: UHF GUARD (243.0) is a frequent place to find interesting chatter.

11807. Re: [bayscan] 216 - 249.995 MHz

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-24 16:26:47 UTC
From: Scott Baldwin
Topic: 11799 Message: 11807

The 216Mhz to 218 Mhz range is designated for use by AMTs, 218Mhz to
219Mhz as IVDs, 219Mhz to 220Mhz as Amateur. 220 to 222 has a special
"Channelization" setup found here:

http://wireless.fcc.gov/auctions/data/bandplans/220_bnd.pdf

The band from 225Mhz to 400Mhz is called the UHF Air band. That's where
you will find a lot of military aircraft activity. There are groups that
are specific to aircraft comms. Two of these are:

http://groups.yahoo.com/group/AirCommSouthwest

http://groups.yahoo.com/group/mil-air

If you go to the AirCommSouthwest group, visit the file section and grab
the files I posted there which pertain to Norad.

And just for those who have the capability, here's a list of UHF Mil-Air freqs:

Western Air Defense Sector (WADS) SAOC
McChord AFB, Washington (Callsign Bigfoot)

228.6 228.9 234.6 235.9 238.4 239.7 252.0 (Primary)
254.2 260.8 265.4 267.0 270.2 271.0 274.4 277.6
281.6
282.6 288.4 298.1 309.4 316.3 320.6 324.0 327.9 328.0
336.6 341.8 346.2 348.2 351.5 355.2 359.8 374.0
377.0
386.0 387.8 390.2 394.2 397.8 398.0

These are used by the jet fighters that have been patrolling our skies
since 9/11.

For those near Travis AFB, the fighter squadron on temporary assignment
there initially operate on:
321.000 Mhz and 311.000 Mhz.

Lastly, U-2s can be heard on 296.7Mhz using the call "Pinion".

Well it looks like we were not alone getting the KLEZ virus on the list here. Seems we had some good company getting it also :)

Virus Hits Law Enforcement, Media

By Christopher Newton
Associated Press Writer
Tuesday, May 21, 2002; 8:28 PM

WASHINGTON ☐☐ The State Department's e-mail identity was forged by a computer virus that sent itself to law enforcement and media outlets across the country, a department official said Tuesday.

Variants of the virus, called Klez, have been spreading since the late 1990s and are transmitted through e-mails and attachments. Klez does not destroy computer files but can clog up mail systems and corporate networks.

Saturday, the virus sent hundreds of e-mails with the return address of the State Department's public affairs office, said a State Department official, speaking on the condition of anonymity.

A computer is infected with Klez the moment a computer user opens an e-mail attachment containing the virus.

Once loose, the virus seeks out and copies e-mail identities stored in the computer user's programs. The virus spreads by sending itself to the addresses contained on stolen "listservs," or electronic mailing lists.

The virus could have gained a copy of the State Department's listserv from any computer it infected on which a user had received an e-mail from the department. It may have infected a computer at the State Department, the State official said.

The process is called "spoofing" by Internet hackers.

"The virus would never had to have had access to a single State Department computer to have spoofed the address," said Steve Trilling, senior director of research at the Internet security firm Symantec. "It's like tacking on a false return address on a letter and sending it to someone who is used to receiving mail from that address. They are much more likely to open it than if it came from a stranger."

The State Department sent an apology to those who received the e-mail.

11822. Encino Explosion/Fire

Hey Bob,

What freq. is KCBS on (the chopper)? I have KGO on 450.2125, 450.2625
& 161.2625 and would like to add KCBS.

Thanks,
Brian C.

11825. SOUTHPAW 1

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-24 21:50:54 UTC
From: Jordan Hayes
Topic: 11825 Message: 11825

I just heard some chatter on 251.7 (in my notes as "Moffett Command Post") with a controller telling "SOUTHPAW 1" to remain on this frequency and stand-by. I can only barely receive this frequency; can someone a little closer confirm this? Also, can anyone identify SOUTHPAW 1?

Thanks,

/jordan

11826. CMARS?

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-24 22:37:54 UTC
From: Scott Baldwin
Topic: 11826 Message: 11826

Anyone on the list know what CMARS is used for? I've started to gather a bunch of mutual aid frequencies, and found a list of six channels called CMARS, but I'm not too sure how valid this list is. Some of these freqs are used in California Prison trunked systems.

Thanks in advance.

From: Harry Marnell
Topic: 11826 Message: 11828

It's the California Multi-Agency Radio System; multiple agencies use some CMARS frequencies for day-to-day activities, such as the State University Police, Department of Corrections, as you mentioned, etc. Also becomes available for inter-agency coordination as needed. I believe it's coordinated and regulated by the Governor's OES.

CMARS white 856.2625

CMARS blue 866.5375 (Imperial, Butte, Kern, Madera, San Benito, Amador, San Diego, Sacramento, Santa Barbara, Lassen, and Sonoma Counties)

CMARS green 867.5375 (Siskiyou, Riverside, Fresno, Santa Clara, San Luis Obispo, Monterey, Solano, Kern, Del Norte, San Bernardino, Orange, Tehama and Ventura Counties)r

CMARS orange 857.2625 (Mariposa, El Dorado, Contra Costa, and Monterey Counties) - (also linked bet CDF-USFS-BLM)

CMARS brown 860.1000 (Riverside and San Diego Counties)

CMARS purple 856.2625 (San Mateo, Tuolumne, Nevada, and Placer Counties)

CLEMARS: Interconnect:
CLEMARS to CMARS 154.920 - 856.2625
NLEMARS to CMARS 155.475 - 857.2625

The Calif. Multi-Agency Radio System (CMARS) is a network of conventional 800 MHz repeaters to bridge the gaps between 'campus' trunked systems and to provide an infrastructure for occasional radio system users, CMARS was launched in the early 1980s on 856/857/858/859/860.2625, along with two Border Area 856 MHz channels. The state was unable to obtain true statewide clearance on the 856 & 857 MHz channels (particularly in the L.A. basin). As the Prisons started development of campus 800 MHz systems, the last three channels (858/859/860.2625) were used, with the other users relegated to 856 & 857 MHz.

When the NPSPAC spectrum (866-869 MHz) was released in the late 1980s, the state obtained three new channels in the NPSPAC spectrum. I don't have a list in front of me of the proper CMARS channel names, but the new channels are 866.5375, 867,5375, and 868.3875, replacing the 858/859/860.2625 channels. Some 856 & 857.2625 activity still exists around the state, shared with other licensees. The Border channel (856.100 or 856.125) is still active in San Diego and Imperial Counties.

Hope this helps,
Don

Nope. CMARS is owned / operated by the Dept. of General Services
Telecommunications Division as a pooled resource. OES provided the
initial 18 800 MHz repeaters and radios to get the channels loaded
20 years ago, partially in effort to get users off of CESRS. :)

It crashed in a field somewhere in the north/east bay, if I recall
correctly. SFPD used some company over that direction for
service on the helicopter, and it crashed while returning to SF.
Both officers on board were killed.

Soundcard decoding? I've never thought of using my soundcard to decode the handshake and data from packet radio. I had thought of using a TNC in an attempt to decode MDT's but the implication of breaking the law is another topic.

51 and 52 are part of GGNRA and have an operating agreement with SFFD, but
are not part of SFFD. You'll sometimes hear them come up and tell ECD that
they're on a run in the Presido or the old forts, so they're out of service.

You wouldn't get very far using a TNC to decode most MDTs, since they use
MDC or Private DataTAC, not FSK.

I was thinking something along the lines of data encryption. I guess
Private DataTAC is the encryption method. Ah well. =)

No, Private DataTAC is just the modulation method. Triple DES is the
encryption method (used on Private DataTAC). Same as trying to decypher
Blackberry traffic.

There is more than one piece of apparatus at Hunters Point, and they have an agreement with SFFD. However, I have yet to hear the Hunters Point unit get called upon for anything. Last time I was down there, I did notice that most of the old RF callboxes were no longer there. If you go out to TI, you might notice a yagi antenna on the fire station that points at Hunters Point. Apparently, the two callbox systems were linked together at some point in the past.

Anyone ever notice how the Bay Area was "demilitarized" just twenty years?

1980: Alameda NAS
Treasure Island NB
Hunters Point NS
Mare Island NS
Hamilton AFB
Moffett NAS
Oakland Army Base
Oakland NMSC
Oak Knoll Naval Hospital
Concord NWS
San Bruno Naval Engineering Center

2000: Concord NWS

Guess the weather must be better in Hawaii and San Diego.

That does ignore that USCG, I suppose. They haven't removed very much from here in the same period.

You cant decode MDT traffic with ANY TNC.
I was an avid packet operator back east and am aware
of that.
You can use your soundcard to decode it with the
proper software but you have to tap the audio on your
scanner before the discriminator output.

11880. Shortwave Antenna

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-26 06:41:00 UTC
From: Al Gonzalez
Topic: 11880 Message: 11880

I have a 20 foot wire antenna. Should the antenna run in a certain direction like east to west or north south?

Thanks

Al

11881. Industry Frequency Guide

From: Hubert Stamps
Topic: 11751 Message: 11882

460.050 is used countywide in San Luis Obispo Co., where Morro Bay is located and in Santa Barbara Co. as an emergency channel with no output tone. If it could be heard to the north beyond Monterey Co., it probably means conditions were very good.

11884. RE: [bayscan] Shortwave Antenna

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-26 07:29:20 UTC
From: gary
Topic: 11880 Message: 11884

I wouldn't go nuts over the direction, but North/South would be best for broadcast shortwave. Perhaps Alaska military shortwave (Elemdorf) would be better with East/West, but you have to look at the world with "great circles", not the north american centric map you probably have etched in your head.

Ok sorry I read it wrong. I think you can do standard
packet with a sound card.
There is a new mode out there for HF that uses it
also.

Before the discriminator? So it's a different point from the tap point
that you pick up the data for say, Treport or other Trunking utilities?

11888. BREAKING NEWS/OKLAHOMA BRIDGE COLLAPSE

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-26 16:17:49 UTC
From: goldwinger16
Topic: 11888 Message: 11888

On MSNBC NOW, a barge , about 2 hours ago. hit a bridge on I-40 smashing ,Actually two bridges, one eastbound one westbound , 4 lanes total, BOTH bridges collapsed. At least 16 vehicles in water, maybe 7 tractor-trailer rigs. ONLY 3 survivors at this time. This is south of Webber Falls, maybe 100 miles from Oklahoma City. it is near the Arkansas border. As you can image , massive fire/ems response , water rescue teams etc. Heavy rain/thunder/lightning at the time. MSNBC says they will have video soon.

Ed

I am not getting ANY messages from any Yahoo lists at
my attbi.com address and I know others with that
domaine are not either.
I worked yesterday and I have to work today so I have
not had time to try and get in touch with ATT or Yahoo
to see what the problem might be but was wondering if
any other ATT Broadband users have tried to get an
answer?
I even tried to re-subscribe my att address to Bayscan
and still am not getting any mail so Im thinking it
must be a problem with Yahoo???
All other mail is coming in fine.
Anyone can contact me off list at bayscan@...

Thanks

Let me ask this. It says that a 2nd bridge was hit. But it doesn't say anything about terrorism, either ruling it out, or it even being a possibility. I don't have cable or sat. tv. Anyone hear about the possible cause as to why the bridge(s) were hit?

The bridges were struck by a barge. The USCG is enroute from Memphis to
determine what happened. The barge is still on scene.

One would expect, if this were a terrorist incident, that the barge would
have been full of JET-A or some such. :-)

From: caladded@aol.com
Topic: 11888 Message: 11894

Doesn't appear to be terrorist, bridges were side by side, I mean REAL close together. Both sections were resting on the barge. They said "major fire/EMS" response but the video only showed LE. There was a BASS fishing tournament going on. many local fishermen involved in the rescue effort. But its over 4 hours old now, not much hope for others. Nobody has said how deep the water is. This will be a big traffic problem for weeks and probably months until the bridge is repaired or replaced. other roads in area are two-lane. Although I have ridden my bike across this bridge at least 3 times, I don't remember it.

Heehheheheh, pretty good Jordan. Naw, I thought the last call I made yesterday was to my girlfriend, Soooooo, I just hit redial but, I forgot I called the PD last night cause the alarm on the grocery store activated last night (code 4 no merit) The funny thing is the CAD did NOT show my call last night, so the officers were hesitate to leave, so they did a "walk thru" to make sure I didn't have any bodies lying in a pool of blood LOL. I don't blame them and didn't mind it, but as they left satisfied it was all code 4 , he remarked about "all the fire engines ((I have a code 3 collectable 1/64 scale engines, trucks etc, about 50 of them) probably thought I was a little "weird" but as all of you know, that is not true , I am just another " scanner nut" :-)

Tonight on HBO at 9:00pm there is going to be a documentary that I was asked to provide audio that I had recorded on 9/11 of the New York City Fire Department.
I dont know how much or even what they might use that I recorded that day but it looks like a good documentary if have HBO and want to catch it.

IN MEMORIAM: NEW YORK CITY, 9/11/01
Premieres May 26 at 9 PM

AMATEUR AND PROFESSIONAL FILMMAKERS CONTRIBUTE COMPELLING VIDEO AND PHOTOS FOR HBO DOCUMENTARY SPECIAL IN MEMORIAM: NEW YORK CITY, 9/11/01

Last December, as HBO's documentary division began work on a film chronicling the events of Sept. 11, it issued a call to the public for visual and audio contributions to the special. Families and individuals were invited to participate in the making of the documentary by contributing items such as photographs, home video, voice mails, recollections, eyewitness accounts, and memories of loved ones from that fateful day.

11909. CC trunking question

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-27 04:49:01 UTC
From: Ben Kellogg
Topic: 11909 Message: 11909

for someone who knows alot about the ins and outs about trunking, this will be an easy question to answer, so humor me.. Lets use sf trunk as an example.. I can pick up 1 control channel and trunktrack it, but if it switches to another cc channel. i can't pick it up. why is that? aren't all CC's deseminated from the same location?

Engine 51 / Medic 51 were used durring the 16 Engine/Truck Earthquake retrofite on Greenwich Street.. They are in the Presideo here's their link Presidio of San Francisco Firefighters (http://www.presidiofire.8m.com/) They cover alot when SFFD is busy There are 2 stations. One is in the Presidio and the other is in the Marin Headlands at Rodeo Beach aka East Fort Baker. <<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<>>>>>>>>>>>>>>>>>>>>>>>>>>>>> Paul Young-KF6YYI [Non-text portions of this message have been removed]

Yeah, they all are. Why one would be receivable and one would not is
strange. My guess is the path from transmitter to antenna has
different loss. It's not a simple run of coax from transmitter to
antenna. And I'm presuming you can never hear it, which would rule out
weather or other natural phenomenon.

Or maybe the system is just poorly maintained and one transmitter
isn't putting out the same power as the other. It sounds far fetched
but it happens a lot.

Wayne

Heehheheheh, pretty good Jordan. Naw, I thought the last call I made yesterday was to my girlfriend, Soooooo, I just hit redial but, I forgot I called the PD last night cause the alarm on the grocery store activated last night (code 4 no merit) The funny thing is the CAD did NOT show my call last night, so the officers were hesitate to leave, so they did a "walk thru" to make sure I didn't have any bodies lying in a pool of blood LOL. I don't blame them and didn't mind it, but as they left satisfied it was all code 4 , he remarked about "all the fire engines ((I have a code 3 collectable 1/64 scale engines, trucks etc, about 50 of them) probably thought I was a little "weird" but as all of you know, that is not true , I am just another " scanner nut" :-)

There was an article in the NY Times about the final minutes of the people trapped in the WTC. Very touching. I would email the article to the group but it is too long to send in one email. If interested go to the NY Times site and search for the article titled "102 MINUTES."

From: Scott Baldwin
Topic: 11917 Message: 11918

When we first started to attack the terrorist cells in Afghanistan, all we saw were bodies of those killed by our bombs, yet we never saw dead bodies killed by those terrorists at the World Trade Center.

While it might have been "bad taste" to show people jumping or falling, I think it was needed. People need to know how bad it really was. And people need not forget what happened that tragic day. Maybe then, those who serve our country will be appreciated more, rather than hated and protested.

Note that the protestors protest the US policy, not those who serve in the military. There is a difference.

The Taliban are not the terrorists, but rather Al Qaeda. [Remember, we used to consider the Taliban to be on our side when they fought the Soviets.]

BTW, why is there no body count reported of Al Qaeda members?

An excellent point. A terrorist wannabe gets a stubbed toe in AK47stan, and CNN puts her on their front page, grimacing in pain and cursing America with clenched fists.

But at least a dozen innocent flight attendents got their throats slit by sadistic bloodthirsty subhuman terrorists, and you don't hear much about that at all, do you?

I would agree, it sure wasn't pretty. But for the liberal, bleeding hearts, I am glad it was shown. I am presently reading Dennis Smiths' " Report from Ground Zero" pretty graphic descriptions from Fire, Police and Paramedics at the scene. You may remember Dennis Smith. He as a FDNY firefighter who was a member of the busiest Engine company in the world. His book "Report from Engine 82" was a bestseller. Engine 82 and Ladder 31 are in the South Bronx. He has several other books out, of which I will be picking up in the near future. This subject may not be directly involved in scanner. But I really think is of interest to almost everyone on this list. Its hard to believe Smith retired 20 years ago. He immediately went to the WTC as many off duty and retired FDNY brothers did on that horrible day.

Topic: 11933 Message: 11933

I have a handful of books and webpage print outs. One of the books I have is a rather old copy of "Federal Gov't Frequency Assignments", it being the 4th Edition printed around 1994. It lists "Victor Net" frequencies for Air Net use. Are these still in use by CDF? The ones I have are:

VictorNet-1 122.925
VictorNet-2 122.900
VictorNet-3 122.975
VictorNet-4 122.850
VictorNet-5 123.075
VictorNet-6 123.050
VictorNet-7 135.975

Could someone confirm these for me? I'm starting to set up my CD bank for the upcoming fire season.

4th Edition printed around 1994. It lists "Victor Net" frequencies for Air
Net use. Are these still in use by CDF? The ones I have are:

VictorNet-1 122.925 CDF Air tanker base ops
VictorNet-2 122.900 CDF Air to Air
VictorNet-3 122.975 CDF Helicopter air to air
VictorNet-4 122.850 CDF Air to Air
VictorNet-5 123.075 CDF Helicopter air to air
VictorNet-6 123.050 CDF Helicopter air to air
VictorNet-7 135.975 Angeles Nation Forest (For what ?)

Could someone confirm these for me? I'm starting to set up my CD bank for
the upcoming fire season.

11944. Somewhat ot: A newfound respect for USCG crews.

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-28 06:09:52 UTC
From: Evan Platt
Topic: 11944 Message: 11944

I was at the San Ramon Art & Wind Festival Sunday, and we had the USCG helicopter coming in at 11:30 and CALSTAR1 was due in at 12:00. The Coast Guard ground crew handled the talk-in on Marine 21-A, and myself and the rest of the CALSTAR ground crew assisted in LZ security. We opted to have the USCG ground crew also handle the talk-in to CALSTAR, so we could give our full attention to the LZ safety and security. Both landings were uneventful. The audience applauded after each helo landed, and applauded as each helo took off. I had a quick chance to talk to the Coast Guard crew - not too extended, as this was one of our busier IST's. One of the things we take for granted with CALSTAR is safety and security. On any flight, any person on board has the authority to end the flight, without question. And I've heard this numerous times, primarily due to weather. Now true, we loose the call, and possibly some other agency may take the cal, however there's no sense in us endangering our lives and the lives of anyone we place onboard by flying in incramental weather. Now the Coast Guard can't do that - the service they provide is compeletely different from the service we provide. And neither do a number of public safety agencies. And God bless them for that. Someone told me one of the unofficial mottos of the Coast Guard is "We'll take on every misison, even if we don't make it back." And I think today is the perfect day to give our prayers and thanks to the men and women who serve this country in one way or another, knowing they may have to give their life for the life of a complete stranger.

I'll get off my soapbox - I should have pictures from the IST shortly. Have a great rest of the Memorial day people.

Evan Platt

There was a demonstration by the Coast Guard this weekend on Saturday over
at Coast Guard station Golden Gate on the Marin side of the bridge.
I had some time to talk to the men who fly that chopper and you are correct
about them being commended. They have to do some pretty crazy training also
he was telling me about some of which is being placed in one of those
choppers, blindfolded and then dropped into a huge swimming pool so that
they can learn out to egress out of the chopper.

I took some pictures of them in addition to two CHP choppers that were
there and also the Sonoma County Sheriff's chopper "Henry One". I posted
them at:

http://www.sendpix.com/albums/020525/141529000000730d9a64835284767f/

Well, a flight of 4 hornets landed here at Federal Air Station
Moffett Field this afternoon at approximatly 1315 hours. Grey Vis
Scheme. They flew right on in with no "options."

Almost 150 years. ago, President Lincoln found it necessary to hire a private investigator - Alan Pinkerton - for protection.
That was the beginning of the Secret Service.

Since that time, federal police authority has grown to a large number of multi-letter agencies - FBI CIA, INS, IRS, DEA, BATF, etc. These agencies have also traditionally worn dark blue windbreakers with the agency they represent in large white letters on the back.

Now comes the "Federal Air Transportation Airport Security Service."
Can't you see them now, these highly trained men and women in their dark blue coats with their initials in large white letters across their backs:
FATASS.

I feel safer already.

Kilkare Road is a branch off of sunol canyon, and does go to the edge of the pleasanton ridge. [Incidentally there is no parking at the end of Kilkare in case anyone wants to be a looky-loo. You could very easily hike to the top of the Pleasanton Ridge then head towards Kilkare. It is only a few hundred feet of elevation change.] The ridge is more like a plateau, i.e. large and relatively flat, which is probably why the pilot was headed that way.

11960. New Radio from Yaesu.....

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-29 03:40:18 UTC
From: Brian Christensen
Topic: 11944 Message: 11960

Yaesu just introduced their newest dual band HT (handy-talkie) ham radio
that I thought everyone might be interesting in taking a look at. Along with
transmitting on the 6M, 2M, 220 and 440 ham bands it has wide band receive.
It basically will receive from .5MHz to 999MHz minus cell phone.

The model # is VX-7R.

Here's a link with all the specs and photos.....
http://www.universal-radio.com/catalog/ht/0777.html

Enjoy!

11970. As promised, some pictures of my car LMR install...

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-29 04:16:39 UTC
From: Evan Platt
Topic: 11970 Message: 11970

First off, thanks to Chris and Dana... they know who they are. :)

Here's a pic of my car setup:

http://www.espphotography.com/centerconsole.jpg
Top to bottom is a Relm MS-200 scanner, Kenwood Dual Band ham radio, Vertex 1011 low band 99 channel (for monitoring CHP, drive througs, etc. :), a Kenwood 800 mhz radio, has a number of public safety frequencies for monitoring and use, and then a GE MPS convertacom, and in the bottom of the screen, a 800 mhz HT. The convertacom doesn't have antenna.

On the outside:
http://www.espphotography.com/carantennafarm.jpg
from left to right, the left hand antenna is right now a dual band generic antenna, hooked up to the low band. As the low band only scans, it's fine for recieving, and is low profile. The FM audio antenna is hooked up to the scanner. The glass mount is a 800 mhz antenna hooked up to the Kenwood. The right antenna is a VHF antenna hooked up to the dual band ham radio. As I only transmit on VHF, coverage is fine.

Evan

The vx5 had a few problems, notably the CTCSS being way too slow. With Yaesu, you are better off waiting until the product is debugged. FYI, I use a Yaesu ft50r, so I have nothing against the company, but Yaesu has a habit of letting early adopters perform their beta testing.

The nice thing about the FT50 is the alkaline pack.

11985. Re: "scanner users, scanner websites are scum" - new TransCrypt advertising campaign...

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-29 17:33:47 UTC
From: Harry
Topic: 11985 Message: 11985

FROM rec.radio.scanner:

it would seem Transcrypt Secure Technologies has started an advertising campaign against the average scannist/volunteer firefighter:

See their ad, "Who's Listening to you now" as shown on http://www.wpascanner.com/transad.htm

jeez, encrypted fire dispatch!?!

what's next? encrypted NOAA weather radio?

I agree. Also, note that THEIR website is at http://www.transcryptsecure.com

The only email for them I find embedded in the pricing page: cgeorgeson@...

I recommend contacting these folks, both at their telephone number - THAT will get their attention IMMEDIATELY, like right now. Also an email, which will give them a record of our opinions. Keep it polite but firm. Some points -

- Demand that they change their ad that paints all scanner listeners with the broad brush of

- The HUGE majority of scanner listeners are law-abiding people who do NOT interefer with ANY police or fire activities, ever.

- a great many listeners are volunteer firefighters, EMS and reserver or off-duty police officers and firefighters, who use their scaners to keep abreast of incidents that may impact them

- the occasional news reports of arrests where the "police confiscated a scanner" PROVE that their having a scanner does NOT prevent police from successfully investigating and arresting these crooks... i.e., they had a scanner but got arrested anyway.

I'm sure you can come up with others. I, personally, wouldn't get into the "right to listen," stuff, they don't care, and the argument could go on forever.

Again, "homeland security" has unfortunately become a magic buzzword for HUGE amounts of governent money flowing out to anyone and everyone who uses it in their request for grants, funding and contracts - whether

they're effective or not

Pass the word to ther scanner & professional groups you may belong to.

Sorry Harry, but I think you are overreacting. Where in either of the ads does it paint us all with one brush? I one site says they are calling us "scum" Funny, I didn't see that on either of them. There is a need for some encryption, no doubt. I am not emailing them, yes.it shows a picture of a firefighter. But again, I don't think its a big deal. Please let me know if there is something I am missing here and I will be glad to email/call them on it.

I'm sure someone will post with the official answer but I'm not sure. It may be any authorized agency 'blessed' may use it, i.e. CALSTAR. We are somehow 'blessed' to use it. Next time I talk to our program manager, I'll inquire as to how it works. If it's a road crew working under/with CALTRANS, they may be allowed to use it. Again, I'm just guessing.

CALCORD 156.075
seems to have a road striping crew on the past few weeks,
working some east SanJose roads.
Any clues if this is a legit user? i thought CALCORD was exclusive license
statewide.

Thanks Russ (and Harry, and Ben, and...)

NO. They are not authorized to be there. 156.075 is a Public Safety frequency, not a Business channel (CalTrans contractor or not). We had reports of some road construction outfit using the channel in the south bay last year, but could not pin them down to a company or exact location.

If anyone can pin down what company and what set of San Jose roads they are working on, I'll "Take it up with the Man."

[P.S. - A whole bunch of Public Safety types out there don't have authorization from OES to be on the channel either - but that's minor compared to this one...]

Date: 2002-05-30 01:33:35 UTC
From: Scott Baldwin
Topic: 12008 Message: 12008

They just paged out on LNU 151.340 for support for a fire in Walnut Creek in the hills near Northridge or Northgate Highschool (I missed the exact name). I also missed the freq the units were to report on, but I think it was 151.385. The "8" is the questionable digit. Estimated arrival for camp is 30 minutes.

Yes there was. It was staging for a fly-by over a cemetary in Hayward for Memorial Day. This was on Monday around 1:15 pm or so. The huge transport made three or four loops around Fremont at about 3,000 feet while it was waiting to make the fly-by. My sources tell me the plane used the call sign "Fred XX"and was based at Travis. They were working Bay Approach on 135.4.

White 1, 2, and 3 are simplex. You may hear more on
White 1 as it is suppose to be in all the Comm Centers
and their antennas are usually pretty high up.

It also circled the WWII military aircraft show at Livermore about 1300. With only 4900 feet needed to land it, it's too bad he didn't! Residents on the western perimeter would have excreted a watermelon when it took off though.

From: Harry Marnell
Topic: 12020 Message: 12022

White is usually used to refer to 154.28, the statewide fire mutual aid frequency.
154.265 and 154.295 are secondary "white" frequencies.

Typically 154.265 is called White 2, and 154.295 is white 3. Rarely heard them used.. :)

White 2 and 3 are used often. Usually by fires with automatic or mutual aid. While you may not actually "hear them" (because, as Tim says, they are simplex) I hear many depts referring to them as TAC channels. CDF often will use White 2 or 3 as a TAC channel for communications with a city or county fire dept.

> From: "Harry" <marnells@...>
>Subject: Re: "scanner users, scanner websites are
>scum" - new TransCrypt advertising campaign...

>FROM rec.radio.scanner:

>it would seem Transcrypt Secure Technologies has
>started an advertising campaign against the average
>scannist/volunteer firefighter:

And as usual, some scanner geeks are responding out
of emotion, and not rationally.

Transcrypt has the right to use a little puffery in
educating their potential market. I haven't seen
where they referred to all scanner users/web sites as
being scum (sic), so please, if we're going to discuss
it, let's not get carried away...

>jeez, encrypted fire dispatch!?!

Sounds silly, but if a department goes for it,
question the department, not Transcrypt.

>what's next? encrypted NOAA weather radio?

Hmm, someone can't grasp the difference between NOAA
Weather Radio's mission and the mission of public
safety agency two way radio communications. Oh, I get
it, that was an attempt at humor!

> Some points -

>- The HUGE majority of scanner listeners are
>law-abiding people who do
>NOT interefer with ANY police or fire activities,
>ever.

The HUGE majority of the people in California are
law-abiding people who do NOT commit larcenies, ever.

But it's the few individuals that DO which cause us
all to have and use locks, alarm systems, etc.

The listening audience that the police need to be
aware of is those that do so with criminal intent.
The police are obligated to try to mitigate the ease

at which those individuals may be able to use certain systems or procedures to evade detection, identification & apprehension by law enforcement.

>- a great many listeners are volunteer firefighters, >EMS and reserve or off-duty police officers and >firefighters, who use their scaners to >keep abreast of incidents that may impact them

And those same police officers who have scanners might appreciate having voice privacy systems. I expect most departments have policies & procedures for off-duty callbacks -- procedures more involved than just hoping the OD personnel might have a scanner, and might actually be listening to it. You certainly have a point, but encryption isn't exactly going to be causing any chaos & confusion to OD personnel (just us scanner geeks who would lose one of our entertainment sources).

>- the occasional news reports of arrests where the >"police confiscated >a scanner" PROVE that their having a scanner does NOT >prevent police from >successfully investigating and arresting these >crooks... i.e., they had >a scanner but got arrested anyway.

That's downright silly! Are you claiming that the media would always report that the criminal had a scanner? How many intelligent crooks successfuly evade law enforcement, thanks to scanners? We don't know that, either.

>I'm sure you can come up with others. I, personally, >wouldn't get into >the "right to listen," stuff, they don't care, and the >argument could go on forever.

Well, they don't care about our "right" to listen, because we don't have one.

>Harry Marnell

> From: "Harry Marnell" <marnells@...> >Subject: Re: "scanner users, scanner websites are >scum"

>Gosh, I never though of myself as a pirate before. >Don't know whether >to laugh or cry.

How about think rationally instead? ;)

> With no stats but 30+ years of monitoring and
>"networking" with fellow radio buffs, I'd have to put
>the HOBBYIST
>group as probably 95%+ of us, the TECHIES at perhaps
>4%, and the SPECIALISTS
>at <1%

That's wonderful, but if any percentage poses a
threat, our public safety agencies have the obligation
to take measures to counter the threat.

Welcome to 21st century America.

>Anything for a buck.

Anything to try to mitigate criminal threats, too.

Tim

The CTCSS problem is well documented. This page is one of many bug lists on
the VX5r:
http://www.icongrp.com/~sllewd/vx5rmain.htm
This page also indicates the VX7R doesn't have the CTCSS problem.

The early FT50 was crappy as well, but eventually worked well after about
two years of customer beta testing.

>>>When I lived in Oregon I was assigned to the 153 CSC (Oregon Air Guard).? The >>>939th was a sister unit and I spent time with its members, my best to them.

The last video feed I saw indicated that there were ambulatory survivors, how many I could not really tell, from this crash. And audio reports indicated that only one crew member was seriously injured. There was a trained EMT, one of the stranded hikers, on-site.

I don't know the medical equipment on-board this helo. Maybe you know and I would be interested in what it was on-board. In any event, I hope it was enough to render a sufficient first-response until a rescue helo gets there.

73 DE TIM KG6IRH.

12049. PoliceCall CD-Rom 3.0 Question (Bug)

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-05-31 11:40:15 UTC
From: Scott Baldwin
Topic: 12049 Message: 12049

I'll make this short. I run Windows XP, and have resolved the main bug pertaining to "Directory Not Found" that has plagued the XP users.

The one bug remaining is a pain in the butt. After the PoliceCall 3.0 CD is installed, the "AutoRun" feature should not run SETUP.EXE again. However it's always trying to launch Setup on my system. So when I put in the CD I have to click on "Exit Setup". It's never done that to me on Win 9x, and I don't know if it's related to XP or not.

Has anyone out there experienced this issue? I've been to the home page for this software, but they're a bit of flakes when it comes to support, as there is no direct link for requesting software support.

http://www.pozillasoft.com/index2.htm

Thanks in advance.

The only alternative is to disable autoplay for that drive...

Right-click the drive letter in 'My Computer,' choose 'Properties,'
click 'auto-play,' then 'select an action,' and choose 'take no
action.'

I think that I got the unit wrong - it is the 304th Air Rescue. The primary mission of the Air Rescue unit is to recover downed/injured pilots in indian country. One of the discovery channels had a program on the PJ training. A PJ is an EMT, jump qualified, water rescue qualified, combat qualified, etc.

Here's the 411 on the Joe incident.

Joe, awakened by the noise from leaf blowers, opened her Pacific Heights bedroom window and asked the perps to quiet down as it was around 10am. They continued with their work further infuriating Joe as she was attempting to continue with her beauty sleep. Joe, now fully awake, stepped into her kitchen and retrieved several tomatoes which would be used as projectiles in an effort to quell the continuing disturbance on the street below. Upon carefully sighting the noise makers, Joe began to hurl the vegetable bombs earthward in an attempt to silence the leaf blowers. Unfortunately for Joe and the leaf removal technicians, the tomatoes, possibly unripe, impacted the two men causing alleged injury to the head and necks of the two workers. Asked for comment Joe simply stated that her hair was in dire need of the beauty sleep and having been so rudely awakened her hair overpowered her common sense resulting in the tomato tossing incident.

Read with tongue firmly placed within cheek!

Cheers!

So Scott,

What is the fix for windows xp pertaining to 'directory not found'. I spent
some time on this and gave up on it. Figured it was $20 not well spent.
Yes I did not have any luck with the helpless support.

RELEASE: 02-66AR

NOTE TO EDITORS AND NEWS DIRECTORS: Media representatives are invited to see a display of two fully restored World War II heavy bombers, a B-17 Flying Fortress and a B-24 Liberator, on Friday, May 31, 2002, at NASA Ames Research Center, Moffett Field, Calif. The aircraft will be on display from 3:00 p.m. PDT until 6:30 p.m. PDT on Friday, from 9:00 a.m. to 6:00 p.m. on June 1-2 and from 9:00 a.m. to 1:00 p.m. on June 3. To arrange for a flight aboard the aircraft, call Kory Stendell at 408/807-0950 or 404/378-1440. News media need only show a photo ID to gain access to Moffett Field.

B-17, B-24 TO THUNDER OVER MOFFETT FIELD THIS WEEKEND

Two fully restored World War II vintage bombers, a B-17 Flying Fortress and a B-24 Liberator, will be on display and available for rides this weekend at Moffett Field.

Sponsored by the Collings Foundation of Stow, Mass., a non-profit educational organization founded in 1979 to organize and support "living history" events designed to teach Americans about their heritage, the nationwide "Wings of Freedom Tour" will be at Moffett Field May 31 through June 3. The aircraft will be on display on Friday, May 31 from 3:00 p.m. PDT to 6:30 p.m. PDT, and from 9:00 a.m. until 6:00 p.m. on Saturday and Sunday, June 1□2. The aircraft will also be on display on Monday, June 3, from 9:00 a.m. to 1:00 p.m. PDT.

"The Collings Foundation's B-24J Liberator bomber and the Boeing B-17G Flying Fortress are flying museums and are authentic `War Birds'," explained Kory Stendell, a foundation spokesperson. "Their tour has special significance this year as we remember and celebrate the national spirit that made our nation the greatest in the world."

The foundation requests a donation of $7 for adults and $3 for children to tour the aircraft. Thirty-minute flights in either aircraft are available for a tax-deductible donation of $350. To reserve a flight, call 978/562-9182.

Craig,

In the early 1970's, I monitored the Augusta GA PD on a "Patrolman" tunable receiver. I remember hearing a report of a domestic quarrel that ended when the male half stormed out of the apartment building - only to be met by his wife's counter-argument, a watermelon she'd hurled from their 5th floor balcony, which broke both his collarbones -- and any immediate thoughts of philandering.

Cortland

Hello John,

Their Tech Support is definitely non-existent. I wrote an e-mail pertaining to my problem, and sent it to the postmaster account at their ISP. Nothing. Their web page does have instructions on resolving the directory issue, however they did not fully explain it. So here it goes:

To fix the "Directory Not Found" you must do the following:

1) Open the Control Panel (Start / Control Panel)

2) Click on the "Performance and Maintenance" icon. If you have the classic control panel then just click on the "System" icon.

3) If you don't have "Classic" control panel, then you will have to click on "System" icon in the new screen that pops up.

4) Select the "Advanced" tab. At the bottom of the resulting page, you will see a button titled "Environmental Variables". Click that button.

5) In the "User Variables for <your name>, change BOTH entries to:

TEMP=C:\Windows\temp
TMP=C:\Windows\temp

Where "Windows" is the directory where Windows is installed.

Problem solved. Do you have the problem of the install program for the CD running every time you insert the disc?

Regards
Scott

Tracy has an excellent CHP page set up. Well he has a lot of excellent pages.

For his web, go to http://www.freqofnature.com/ , and you can then click on
the CHP link or any others you find of interest.

The CHP page contains channels by colour, as well as breakdown of regions
including PL information. A direct link to the CHP page is
http://www.freqofnature.com/chp.htm

CDF Tac Channels are the inputs / outputs of the Command / Local pairs
not used in a given area. CDF is in the process of adding a Command
pair so as to provide two statewide Command Pairs (1 & 2) and a Unit
Command Pair in each CDF Unit.

Topic: 12062 Message: 12097

Fire Center 2002 is opening up June 3rd at 8am. On there will be the
new command net maps among other things.
http://www.norcalscan.org/fire/ still Fire Center 2001 but changing Monday. ;)

Jake

About 20 minutes ago, I caught the tail end of a dispatch for CalStar 1 on CDF (151.37) to Marin County, their ETA should have them o/s by now.
They said something about an "attack" I would bet its another shark attack, maybe Stinson beach again. Their Ground contact was Chief 800 who WAS the contact on the attack the other day (wasn't it yesterday ?)
they were on calcord for CalStar 156.075

Where Mountain and Kelso cross is ALCO, FWIW. About a half mile west
of Byron Road and Kelso Road is where San Joaquin starts.

I heard the request for a chopper also but didn't hear anything about that medical call having to do with a Shark attack? If there was a second one yesterday it would have been ALL OVER the news.
I checked all the local news sites and didn't see anything mentioned.

> Probably preaching to the choir but I'm from NorCal so give me a break ;)

Yeah, echo that.

I've been away for one week and, despite several messages claiming that there was low posting or problems with ISPs, there were 331 new messages in BAYSCAN in those 7 days. More than half were unrelated to bay area scanning, dealing instead with reports of national news stories which were breaking on cable TV (is this national_newshound or bayscan?), requests sent to all members asking ONE member to contact (the email addresses are in the headers, use them!) and other irksome blather.

Oh, and those 331 new messages is *after* having killfiled most of the chronic off-topic posters, so the actual volume was probably much higher. Since people with jobs can't keep up with this volume, we should describe this as "Bay Area General News Chat: for the retired, shut-ins, and others with too much time on their hands."

Yeah, yeah, I know. *This* message is off topic too, and I've stepped on your toe in even suggesting that you pause and think whether what you're about to post is relevent to Bay Area Scanning. Whatever. But look, if you've got a message for one guy, send it to THAT guy, not to all of us. If you want to talk about a bridge collapse in the Midwest, go to a CNN chatroom. (Ben's excepted since he probably picks that stuff up on his bay area scanner.)

As that doctor on late night TV used to say, "Tell to me your problem."

Did this just start out of the blue, or did you add a preamp, new antenna, etc? Do you hear pager intermod? The pager has a musically 'preamble'.

VHF pagers are nearly a KW and should be banned.

It's typical of scanners though, with their general lack of selectivity
and filtering compared to "professional" receivers.

Drive into the heart of the city with a Uniden scanner and a roof-mount
antenna. You'll hear TONS of crap that no "real'" radio would ever let
through. They can only squeeze so much into those tiny boxes... the
trade off for such wide reception range is poor selectivity.

Often, the best solution is to use a "worse" antenna!

harry

Hey guys, as I have said before record some of this stuff for those of us
who are out of range to receive it!!
Then send me the file so I can post it on my web page and we can all listen
to it.
Im not getting it here in Sausalito of course.

Just a suggestion: On the norcalfire list we try to
save the post until the first engine gets on scene and
does the report on conditions, becuase 1/4 acre slow
rate of spread as No potential. Just my 2 cents.

Mike

You say that was a Mustang? I saw a WW2 era fighter flying Sunday with a C-130. Didn't get a good view of it though. It was buzzing around too fast, and I was trying to keep my eye on traffic!

Since there are so many of us scanner geeks out there (myself included) Why not sign up to Incident Page Network IPN - Main page (http://www.incidentpage.net/) . You can recieve pages as well as see it on the computer screen. If you sign up as a dispatcher you can dispatch these incidents out. IPN is big and getting bigger. It's all over th country and Canada and Australia. Best of all it's FREE! Paul ipn-SFO002@... [Non-text portions of this message have been removed]

In checking www.trunkedradio.net, I saw an update on Richmond/San Pablo/Hercules/Pinole's EDACS system, with plans to build a simulcast repeater with different frequencies. Anyone have any info on this??? I don't understand why they're going with new frequencies at the simulcast sight.

does anyone know of a site where you can enter two gps coordinates and find out the distance between the two? i just raised my antenna quite a bit and i'm hearing alot of distant stuff. i want to type in my coordinates and the transmitter coordinates and see how far im actually hearing. thanks in advance.

things ive heard so far from san ramon using 2m/440 copper j pole at about 40 feet. most stations about s7

stanislaus co so
mariposa co so
woodland pd
placer co so

Im in Sausalito and have a ground plane on the roof of my building which is
on the top of a hill.
I would guess my elevation is a good 300 feet above sea level.
I never even tried to get some of the departments you guys are getting.
Ill have to try placer, mariposa, stanislaus, amador, sonoma, nevada, napa
& lake counties

Here is what I have found with two scanners, both with different firmware the one with V1.17 has a bad squeal when in TRUNKING MODE and if two talkgroups on the same group (i.e.: two Police talkgroups are on at the same time) but works fine out of trunking, and I don't get that with the scanner with firmware V1.04.
and I can't remember which one I got first.
anyway this is just what I found

I don't know of one off-hand, and since you don't know the actual antenna height at the other end, I'm not exactly sure how much good that would do you.

However, for the physical, not radio, horizon:
At 1 ft ASL, the horizon is 1.3 miles away,
At 100 ft ASL, the horizon is 13.5 miles away,
At 200 ft ASL, the horizon is 19.0 miles away,
At 300 ft ASL, the horizon is 23.3 miles away,
At 400 ft ASL, the horizon is 26.9 miles away,
At 500 ft ASL, the horizon is 30.1 miles away,
At 600 ft ASL, the horizon is 33.0 miles away,
At 700 ft ASL, the horizon is 35.6 miles away,
At 800 ft ASL, the horizon is 38.1 miles away.

(These values of from Pub 9, Part II, Table 8. I don't have the trig formula handy for this calculation)

The radio horizon is slightly larger. And this is for the horizon being at sea level -- if the other end is at elevation, you can see that the values could get quite large. Hence satellites seeing an entire hemisphere.

Well, I figured if there is a GPS maker that starts with an A, someone would chime in...

Actually thinking back, it may have been a "Pay-per-view" type thing - I was given some software a friend couldn't install, so he wanted to see if I could, and when I did, it automatically gave him/me a web site link to go to to map out routes based on GPS coordinates.

I'll look at home for the link.

Evan

Once you clear the local obstructions, you really can't add enough height at your QTH to make a difference.

This page gives the radio horizon taking into account both the transmitter and receiver.
http://home.att.net/~wittenberg/radar/calculators/horizon.htm

The equations are here:
http://home.att.net/~wittenberg/radar/chapters/ch04.dir/ch04pr.dir/c04p2.dir/c04p2s.htm
The horizon depends on the square root of the height, so raising the antenna a bit doesn't help much.

Grass Valley fire can be heard on a handheld from the foothills in San Ramon's west side. I don't know about those other agencies.

12195. RE: [bayscan] sf trunk signal boost

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-07 00:10:45 UTC
From: Jake Hickok
Topic: 12192 Message: 12195

Lots of tropospheric ducting and inversion layers (same thing?) up
and down the valley as cool air and warm air clash or don't mix.
Imagine water and oil. Put half and half in a glass. The water is
warm air, oil the cooler upper air and they DON'T mix. Right where
the two mix it creates kinda a "tunnel" or "duct" in our terms that
VHF can travel through. For you trekies - think short range worm hole
that extends a signal a little more than normal. Sometimes these
ducts can be long distance but usually it requires the exact same
airmass so it's limited to how large the airmass is - which limits
you to maybe the fertile valley of CA so I in Red Bluff can hear
southern valley units much clearer than earlier in static or if at
all.

This can happen in all sorts of weather.

Yeah, if I recall correctly Mother Nature simply lowers and raises the atmospheric layer which bounces radio waves.

This topic is definitely a well involved one to discuss. You can go on forever about propagation and weather conditions. You've also got Sun Spots which are caused by explosions on the sun, or something like that.

Well tropospheric ducting does not affect the 800 Mhz bands. That usually occurs on the low bands like 6 meters which is why you pick up agencies out of state when its warm sometimes in the low band 30-50 Mhz.

Im in Sausalito and can receive the SF trunked system but I get it with a bit of "white noise" at just fired up the scanner and seem to be still getting it that way so I have no answer..

12199. RE: [bayscan] sf trunk signal boost

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-07 05:45:22 UTC
From: gary
Topic: 12192 Message: 12199

The lowband skip is more related to sunspots.

Here is a blurb from Gordon West on tropo when he did that record breaking ATV between Socal and Hawaii:
http://www.ham-radio.com/sbms/newsletters/2000nwsltrs/jul00.html
"TROPO TIME IS HERE" by Gordon West, WB6NOA

The early May hurricane in Baja opened up a brief 2-meter and 432 MHz reception of the Hawaiian beacon here in Southern California. On my return from the Dayton Hamvention, on Monday, May 22, the beacon could be heard weakly on 2 meters, and K6QXY heard the KH6HME beacon on 432 MHz.

Paul called to indicate there was an elevated noise coming from the mainland to stations near Hilo. Paul also indicates he now has a new cellular phone for all of us to coordinate with him when the band begins to open, and when he is up on the hill. He asks only use the cellular phone during active big band openings. The Paul Lieb cellular phone number is 808/345-4253.

Chip Margelli, K7JA, in cooperation with Yaesu, has sent to Paul a 2-meter FM transceiver which Paul has already pre-wired up at the beacon site. Paul will operate on 144.330 MHz, vertically polarized, after he has established SSB contacts during the next long tropo ducting event. Of course, he will work SSB first, but will then switch over to FM to offer a tropo experience to those only with FM base and mobile stations, vertically polarized. We are hoping that this will encourage more FMers to join us on SSB. We don't believe that the brief period that Paul will be on FM will significantly take away from his 2-meter SSB activities, and we all hope that this FM activity will increase awareness of how far the tropo ducting may extend, and more awareness of the weak signal SSB portion below FM operation at 144.330 MHz.

When the band opens up between Hawaii and the Pacific Coast mainland, I will get onto many of the repeaters and instruct anyone wishing to work FM to Hawaii to go to 144.330 MHz simplex. We will say NOTHING about the SSB frequency we are using so that no FMer would get mixed up and end up on the weak signal portion of the band. We will only mention on FM 144.330 MHz.

12200. Re: [bayscan] sf trunk signal boost

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-07 14:04:05 UTC
From: Wayne M H
Topic: 12192 Message: 12200

I know there are conditions which can affect 800MHz though. Nothing
that will cause you to pick up a transmission from Oregon but possibly
something in Ben's case, I just can't recall the condition.

Another problem which can affect SF's trunked system's transmissions
is due to the fact that they use Simulcast. When sites within the
simulcast network don't properly overlap the signal gets a ringing
sound to it. But it's not something that would cause an increase in
reception though.

These hills and valleys around here (East Bay) can create some weird
fade though.

12201. red flag

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-07 21:47:10 UTC
From: Pam & Jeff Schiller
Topic: 12201 Message: 12201

...A RED FLAG WARNING FOR NORTH WINDS AND LOW HUMIDITIES IS IN
EFFECT FOR SATURDAY AND SUNDAY FOR THE SOUTHERN SACRAMENTO AND
NORTHERN SAN JOAQUIN VALLEYS...AS WELL AS THE SURROUNDING SIERRA
FOOTHILLS BELOW 3000 FEET (THIS AREA INCLUDES THE NEVADA-YUBA-PLACER
AND AMADOR-ELDORADO CDF RANGER UNITS). THE WARNING AREA ALSO
INCLUDES THE BAY AREA (THIS AREA INCLUDES THE LAKE-NAPA-SONOMA...
SAN MATEO-SANTA CRUZ...AND SANTA CLARA CDF RANGER UNITS).
THIS FIRE WEATHER WATCH INCLUDES FIRE WEATHER ZONES:
535...546-550...552-554...558-559...561-564.
HIGH PRESSURE WILL CONTINUE TO WEAKEN OVER NORTHERN CALIFORNIA TODAY
AHEAD OF A STRENGTHENING LOW PRESSURE SYSTEM ALONG THE COAST OF
BRITISH COLUMBIA. COOLING WILL SPREAD FURTHER INLAND TODAY AS
ONSHORE FLOW PICKS UP STRENGTH AND BRINGS HIGHER HUMIDITIES INLAND.
OVER THE WEEKEND...AS THE LOW PRESSURE TROUGH MOVES SOUTH INTO
NORTHERN CALIFORNIA...STRONG NORTH WINDS WILL DEVELOP LEADING TO
MUCH LOWER HUMIDITIES ALONG WITH COOLER TEMPERATURES AS THE MARINE
LAYER IS QUICKLY MIXED OUT. WIND GUSTS OF 30-50 MPH ARE POSSIBLE AT
TIMES OVER THE WEEKEND!
PLEASE ADVISE THE APPROPRIATE OFFICIALS AND FIRE CREWS IN THE
FIELD OF THIS FIRE WEATHER WATCH.

12202. Milpitas Vegitation Fire

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-08 15:03:38 UTC
From: Craig Rose
Topic: 12202 Message: 12202

Good morning all. Just had CDF helicopter 106 fly over the house here. Always a good indication of something happening. Tuned into CDF Morgan Hill to hear an update on the 'Allison Incident' currently ongoing in Milpitas.

Latest update from CDF IC:

125 acres involved with three structures in the area. 50% containment with 100% containment estimated for 1200 local.

Comments from Milpitas Chief:

Advises this will be an all day event. If fire takes off they will be calling for a strike team with mutual aid from Fremont and San Jose. Operations will be switched to RED NET if conditions worsen.

Frequencies:

Milpitas Fire: 460.625
Milpitas Fire 2: 460.575
CDF-Morgan Hill: 151.445
RED NET: 39.920

Craig Rose

I wonder when they started installing low band radios in the fire
engines in Santa Clara County? (And I haven't seen any CDF-owned
low-band HTs or mobiles going through Sacramento...)

Don

Topic: 12202 Message: 12204

Actually the RED NET is used for administrative purposes. Typically we'll use this as a quick means of calling up mutual aid response packages for multiple alarm incidents. Mobiles are not actualle equipped with VHF low capabilities, at least not in Santa Clara County. However, all of the dispatch centers are set on this net. Hope that clarifies it.

Cheers!

Craig

Topic: 12208 Message: 12208

IC has orders two additional type one engines from Gilroy and San Jose and CHP for traffic control on highway 101 and Santa Clara County Sheriff for traffic control on Sycamore.

Sycamore IC updates incident as being 2-3 acres pushed by northerly winds with several structures threatened, but good progress being made and containment expected shortly.

IC located at Sycamore and East Middle.

FCounty engines 1, 2, 3 and one PT, Task Force 71, engine 1691 Transport Dozer 1641, etc.

12212. CHP car-car

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-08 18:49:00 UTC
From: wolter872
Topic: 12212 Message: 12212

CHP uses the same freq for base and car-car. The PL tone for Golden Gate is 131.8. Do they use a different PL tone for car-car? Is the car-car what I sometimes hear dispatch refer to as Channel 2, and how do they know if its Channel 1 or 2?

Every time I've gone out to a highly patroled area to scan tones, they never use car-car! Arrrrgh!

I missed it. IIRC, these transmissions are supposedly instructions to spies to switch codes. Your last mention of them was 5/25 at 1536, so they aren't normally at Noon then, eh?

I myself am trying to make sense of the CDF scheme, but here's a link with great resources and freqs:

http://www.freqofnature.com/cdf.htm

Look at the map to find out what zone you want to monitor. I have LNU, SCU and CZU programmed in. The only thing I don't know is which air freqs and tacs to use for each zone. Or if they just grab whatever from the lot.

If you use the PL tones you can tell what CDF Unit the dispatch is
coming from by channel number.

(and there are 23 CDF TAC channels...)

> so not all the inputs are repeatered?

CDF hae 10 'standard pairs' pairs of frequencies used for repeated operations. The 10 pairs are now known as "Command 1" through "10." "Command 1" and "Command 2" are established statewide. Each CDF operating unit (formerly 'Ranger Unit') has (at least one) Local net, taken from one of the 10 pairs. CDF is building out a third "Command Net" into each Unit from one of the pairs not currently used in that Unit's area (or the adjacent units).

The 23 TAC channels are taken from pairs 3-10, plus other discrete channels CDF has been able to license either statewide or in areas of the state. Both output and input frequencies are used. Each CDF Unit has assigned TAC channels based on non-conflict with other CDF and non-CDF usage in the particular area. Since the TACs are used on scene (mobiles, portables, and aircraft) CDF is willing to put up with any 'interference' from another user outside the area of the incident (or, the less-occasional interference to another CDF Unit from TAC operations 75+ miles away).

From a scanning standpoint, it may look like a mess. But from the standpoint of effecient use of the spectrum, it's a verry effective use of a finite resource.

Don

I do believe the initial post is on topic, since it indicates a group in the police department of two bay areas cities. Remember, Alameda had this policy of harassing African Americans, which was not discovered until someone leaked their MDT traffic.

The sectional charts don't give enough information about the ATC sectors. A better set of maps (though still out of date) can be found here:

http://www.faa.gov/ats/oakaifss/Airport%20Charts/arptgraphics.htm

There's a lot of other good stuff too, like traffic flow maps for both the west and southeast plans. I've asked around a little bit and I don't think there is anything available that's newer.

It is my understanding that on large fires they do use them I have heard them used in the oakhurst area minimal and I have heard some drills done on them in BEU but we are talking very minimal usage ,as someone else mentioned they are simply the inputs of they primaries.....

From: blueangel_78
Topic: 12239 Message: 12277

Well, I'm not a pilot, but can offer this much. If you are
interested in learing about the particular frequencies of an airport,
check this site out. http://www.airnav.com That will help you
interpret the numbers on your sectional cart. And here is a quick
rundown (atleast an educated guess ;)).
CT = Control Tower (primary frequency).
ATIS = Automatic Terminal Information Service.
100/30 (in Bold Blue) = The top Number is Ceiling in hundreds of feet
MSL and the bottom number is the Floor in hundreds of feet MSL.
Solid Blue Line = Class B Airspace.
Solid Magenta Line = Class C Airspace.
Solid Blue Circle = Class B Surface Area.
Solid Magenta Circle = Class B Surface Area.

So to use HWD - HAYWARD EXECUTIVE AIRPORT as an example:
Control tower at 120.2.
The Star indicates operations part-time.
"C" in a solid blue circle inidcates Common Traffic Advisory
Frequencies (CTAF).
ATIS is 126.7
47 is the elevation in feet.
*L means lighting limitations exist (no star means lighting sunrise
to sunset).
50 is the lenght of longest runway in hundreds of feet.
122.95 is the UNICOM.
RP 10R, 28R shows that Right Traffic Patterns.

I hope this helps.

Regards,
Sagar

There should be a pilot shop in the General Aviation section of the airport, away from the commercial stuff. Most often it's in or near the tower. Ask for the SF Sectional, and expect to pay around $10 or so. If you're not using it for navigation, you can use it for years, but if you ARE using it for navigation, then there is an expiration date on it. Usually the dates are January/July, but it could be different for different sectionals.

CHP has ex-military UH-1s in service. I don't know what EBRPD uses for
their air ops, but it might be something big so they can also do air attack
with it.

I saw it yesterday while on the "Riot in East Oakland" ride as we passed through Tilden. I'm not familiar with helocopter types, but it was a small (2-4 person) newscopter style helicopter, white with a light blue horizontal striping color scheme, iirc.

A quick web search turns up no photos but one suggestion that it's small and that it may once have been:
http://ourworld.compuserve.com/homepages/griffined/auglog.htm
"The East Bay Regional Parks helicopter "EAGLE 1" was heard on 156.075 MHz which is the CALCORD frequency coordinating photography and "look see" rides with a unit on the ground."

This link suggests that until last year they had an AS-350 B2:
http://www.aviationtoday.com/reports/rotorwing/previous/1001/1001rorep.htm
"It's too early to tell whether the AS-350 B2 that crashed over the Grand Canyon encountered a bevel gear failure similar to the one that brought down an East Bay Regional Parks helicopter near San Francisco on March 17. However, the account given by the surviving passenger and the NTSB's preliminary findings did not eliminate that possibility."

Topic: 12240 Message: 12282

I've been in Tilden when that EBRP chopper is flying. In fact, last Wednesday they sent the chopper to warn swimmers at Lake Anza who were swimming in the area where it is prohibited. Of course, why the lazy park ranger couldn't walk to the other side of the lake (about a 10 minute walk) is a good question. The helicopter has a very effective bullhorn. As the illegal swimmers walked towards their cars, the ranger met them and ticketed the evil-doers.

The aviation today article isn't entirely clear regarding the EBRP chopper, but as I recall they were able to land the helicopter safely. So I gather the "surviving passenger" was on the Grand Canyon flight.

Getting back to Jordan's original post, I heard on the KGO afternoon news that they were using "military helicopters" with night vision (my guess FLIR) to locate that child who was abducted in Hayward (and subsequently found murdered). Since Jordan's spotting was at night and he said it sounded like a military helicopter, it might be the search went a bit beyond Hayward, or maybe the helicopter had to go past Oakland to get to Hayward. A few of the military bases I've been to use Pavehawks for security purposes, and they are FLIR equipped.

12288. OT: Colorado wildland closes in on Denver, 40K possible evacuations

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-11 00:59:09 UTC
From: Ben Kellogg
Topic: 12288 Message: 12288

DENVER (AP) - A wind-driven wildfire closed in fast on Denver on Monday, and authorities said up to 40,000 people might have to be evacuated from their homes along the southwestern edge of the metropolitan area.

Photos

AP Photo

The 61,000-acre fire roared to within 10 miles of residential neighborhoods, spreading toward Denver at about a mile an hour.

Firefighters were pulled off the lines in front of the fire because it was too dangerous.

"They just cannot see the front of this fire because of the smoke," said U.S. Forest Service spokeswoman said Barb Masinton.

Nearly 500 homes and several campgrounds about 50 miles southwest of Denver were evacuated on Sunday.

Masinton told The Associated Press that an additional 40,000 residents had been ordered evacuated. But U.S. Forest Service spokeswoman Susan Haywood, who is Masinton's boss, later said Masinton misspoke. She said that it was possible 40,000 would have to be evacuated, but that no such order had been issued.

"It was our lifelong dream to live up here," said one of those evacuated, Carol Simone, whose home is about 30 miles south of Denver. "It isn't about the house, it's the woods and the environment. If that's destroyed I'm going back to Florida."

The fire was started by an illegal campfire Saturday in the Pike National Forest 55 miles southwest of Denver and had doubled in size since Sunday. Campfires have been banned in national forests and most counties because of severe drought.

Nearly 300 firefighters were on the lines and more crews were ordered into place. Four bombers and four helicopters dropped fire retardant and water.

It was one of at least eight fires in Colorado, including an 8,300-acre blaze that destroyed 24 homes and sent residents fleeing in Glenwood Springs, near Storm King Mountain in western Colorado.

The fire near Glenwood Springs was 5 percent contained Monday as improved weather allowed airplanes to resume bombing the flames with retardant. The fire destroyed 40 structures, including 24 homes. About 3,000 residents were ordered to evacuate during the weekend.

Authorities said a few residents might be allowed to return to pick up urgently needed items such as medicine.

No injuries were reported at Glenwood Springs, but firefighters there were especially cautious because of memories of the Storm King fire that killed 14 firefighters on similarly dry, steep terrain in 1994.

Red Flag today - second day in a row! At one point in the afternoon, LPFD was working four fires at once, including a two alarm home in Ptown.

BTW, it was funny when LPFD arrived at Ruby Hills and told their dispatcher somebody's already doing bucket drops and attacking on the ground, but "we don't know who they are yet." CDF, of course. LPFD took over cleanup, overhaul, etc.

Well I'm just sitting here catching up on bayscan after a few days off, and what to my wondering ears does appear, but a relit fire that was fought already today...the second alarm I referred to below.

Seems it wasn't fully extinguished today, and now it's a 100% involved structure. Sparks are lighting off roofs (shake, no doubt) of houses nearby on Flemington Court, so they're calling another second alarm today on Runnymede Court, Pleasanton. Because it's 100% on fire, there's no going inside this time. All hoses are outside.

This might look bad on somebody's resume.

Doing an intense and extensive knockdown and exposure protection. Starting to release some units now. Apparently there was some other home roof exposure and tree exposure fears. According to my back-up,Reno, this was a 2 alarmer Today?? Bringing back out a fire inspector to the site. Most spot fires contained. starting to initialize a mop up. Slowly. crews now inside with two lines. Interior attack is now in progress, two lines 1 water 1 foam. 45 min. on the incident clock.

Likely the MH-60s out of Moffett; they're pararescue a/c and are equipped
for heat-sensing.

fyi, that is a MH-60G Pavehawk in the link I supplied. Tail number 91-26352. The black pod on the opposite side of the fuel boom is the FLIR. The guy in the back is riding shotgun. [OK, he is riding machine gun.] You can look up the tail number here for more info:
http://www.scramble.nl/milbase.htm

I've encountered the MH-60G a few times. Using landmarks for reference as I watched it fly, I estimate it can easily be heard about 6 miles away. Hayward to Oakland is about 8 miles, so maybe Jordan was hearing one of these helicopters.

12299. Mobile Radio Installation help

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-11 19:44:39 UTC
From: Jake Hickok
Topic: 12299 Message: 12299

Well, my Chevy truck is no longer going to work for me. The
headgasket blew one too many times for me to pour more money into it
and I have a waterfall coming out the tailpipe.

So I bought a 92 Ford Taurus. Something to get me around and the
price was right so if it dies on me later on, I won't miss it. But
I've never installed radios in a sedan/car before. A truck was always
a vehicle I can just drill into and have fun with (and I owned it so
I knew I wouldn't be selling it). With the car, I'm timid about some
stuff that I wasn't timid about in the truck.

I will be installing trunklip antennas on the back trunk for sure. I
am going to try and not do magmounts, and no permanent mounts on this
car unless I end up getting a lowband whip. Then I *might* do the
back trunk dead center permanent. For inside, a mobile scanner,
probably another in the future, and a dualband amateur rig (FT8100).
I have a remote kit for the 8100 and will probably remote mount it so
I don't have to run the coax all the way to the front. But then
(since I'm not in my right mind with the wedding coming up) I have to
run coax to the scanners anyway so what's the difference. ;)

One concern is how easy is it to drill on the center hump over the
transmission? I won't bust into anything bad would I if I went into
the center hump? That's the biggest concern. I can figure other stuff
out on my own if needbe but I'm not about to poke a drillbit into a
transmission LOL.

I am looking at Galls mobile setup here - something simple.
http://www.galls.com/shop/viewProductDetail.jsp?item=VE112

That'll give me room in the future for one more radio I think.
Robert? Anybody have a good mobile sedan setup that can send me some
good hints/tips.

Thanks for the help!!
Jake, who is still walking around with a foot in the mouth for a few days....

I actually saw it. I would have taken a picture, except it was at night, so all you would have seen would be the lights :-)

It was doing a circuit I estimate to be roughly a 0.5-mile radius from the Claremont Hotel. And like I said, it sounded like a Blackhawk, so any of the -60 variants would work. I just wonder why it was there . . .

Back to scanning: heard another one of those numbers calling this morning on 311.0/321.0; working on a tip from someone from another list, I checked 323.8 as well. It seems likely that these are from the TACAMO E-6 mission.

Those numbers go out all the time on shortwave, typically 11.175usb. The Tacamo's are out of Travis.
http://www.lazygranch.com/images/tb-6.jpg
There are generally 3 of those white planes on the base at the times I've gone there to investigate.

Check out http://www.wunclub.com/files/eam.html for coded messages. The foxtrot messages are similar.

Are you on AM or NFM? I've never heard these coded messages on UHF.

A HH-65 is an Alouette. SF used to have an HH-60 (Jayhawk), but they moved it away either up nor or down south. The Coasties have 80 of these in service and 14 in storage or support roles.

Anybody:

I have plugged in the Oakland Frequencies but can't seem to pick anything up in the Hayward area. When I am in San Leandro, bam, I could hear it really good. Can someone give me any clues in why I can't hear it in the Hayward area.

Also, I am thinking about listening to San Francisco. Will I have the same problem, as well as, listening to Oakland? Do I need a better antenna for the house (oh, I live in an apartment complex).

Thanks

Willie

oakland is almost impossible to pick up if you aren't in oakland.. kudos to you for picking it up in san leandro.. unless you have a yagi forget about it if you're in hayward... san francisco is another story. if you can put your antenna high enough with some good coax you should be able to pick it up. i am able to pick up sf here in livermore on a diamond discone with 55 ft of lmr 400, 37 feet up....

Actually, on the West side of the bay, Oakland isn't that tough to get. Especially if your fairly close to the water. Doesn't do you much good in Hayward. But Antenna, Antenna, Antenna is everything. Get the best one possible that your apt. complex will allow. As Ben said, Oakland can be tough in the East bay because of some of the hills. If you lived down near the bay, you might get them, but I get a feeling you don't. Good luck on SF, Ben is right, with the right antenna you are close enough to get it.

Topic: 12299 Message: 12310

Jake: The setup I have is pretty decent, IMHO. I have two pictures (Yes, one is out of focus, I'll be replacing it tonight): http://www.espphotography.com/centerconsole.jpg is the console. As you can see, there's room for easily 6 radios. My buddy has a few of the consoles left for $10. You'll need a mount, but that's gonna be the most expensive piece. He has one designed for a crown vic that MAY work on a older Taurus - he wants $10 for the bracket. The piece we used mounted to the screws set to hold the center 'armrest' in place - so no holes drilled to the car (in the center at least!) Getting power was tricky - this is a 01 taurus, so you may have more luck with a older Taurus. As for the antenna farm:
http://www.espphotography.com/carantennafarm.jpg
Yes, that's a bad pic too. The antenna on the left is a dual band scanner whip - that goes to the low band radio. The FM antenna ties into the scanner. The on glass is a 800 mhz antenna for the 800 mhz Kenwood. the VHF stick goes to the dual band, as I primarily transmit on VHF, and rarely even recieve UHF. The convertacom uses the HT antenna. I'll work on better pictures tonight - the URL will be the same.

Antenna plays a big role in Hayward, I can pick up Oakland with my Austin Condor (black rubber duck) in the hilly parts of Hayward, once I get on the flats, I still get 'em with static.
-Mike
WLucas9925@... wrote: June 11, 2002

Anybody:

I have plugged in the Oakland Frequencies but can't seem to pick anything up in the Hayward area. When I am in San Leandro, bam, I could hear it really good. Can someone give me any clues in why I can't hear it in the Hayward area.

Also, I am thinking about listening to San Francisco. Will I have the same problem, as well as, listening to Oakland? Do I need a better antenna for the house (oh, I live in an apartment complex).

Thanks

Willie

I get both Oakland and SF fine here in Sausalito with just the stock
antenna on the back of the radio.
Actually Oakland has a much better signal to me.

So that's a coast guard helicopter, eh? It's very busy on weekdays, travelling past the Embarcadero about once an hour. It makes quite a distinctive noise. I'd thought it was a new shuttle from the financial district to the airport!

The "transmission hump" on a Taurus contains no transmission. The transmission in a front wheel drive car doesn't extend back from the motor. So if you crawl under there and have a look see first, you'd probably have no problem drilling into that hump. All that's usually under there is wiring and exhaust, and both are easy to avoid.

If you absolutely positively don't want to drill, another way to mount stuff is to piggyback on existing mount holes that hold down the center console, etc. First you start unscrewing the interior parts next to where you want to mount your rig. Then you observe how those parts are attached. You can often attach a secondary item to the mounting holes, using either the same screws or slightly longer ones. One trick is to use a short length of stiff plumbers strap, also used in stereo installation, to gain an offset mounting point an inch or so away from the stock hole.

I doubt you'll get more reliability from a car than you will from a truck, even a Chevy. But maybe the future missus will be happier in a car. I find that cars have become so homogeneous and sterile that only trucks interest me anymore. They're all amorphous jelly bean blobs with banzai headlights. But that's OT. And as you note, it's much easier to install hams and scanners in a truck. That's OnT!

[bayscan] Red & White channel

> red 460.600
> white 154.280

Wrong! 460.600 is Hayward Fire Yellow. The red is the old AlCo 154.070

From: "unidenapco25" <scarpenter@...>
Subject: Uniden APCO 25 Digital Field Testing

To Whom It May Concern:

I'm Scott Carpenter, Product Manager at Uniden America Corporation developing the APCO 25 Scanner.

Uniden has successfully field tested our BC785D digital capable scanner with the BCi25D APCO 25 card in Los Angeles, San Francisco, San Deigo, Mansfield, TX, and Wichita Falls, TX.

We are continuing our field testing and would like your help. We want to visit as many cities running different types of APCO 25 systems: UHF, VHF, 800, Conventional, Trunked with Analog Control Channel and Trunked with Digital Control Channel.

In order to field test your city, county or state system we need to know what type of system you have, the control channel and voice channel information and areas of strong coverage.

Uniden's APCO 25 scanner will not be able to monitor any encrypted communications. Nor will Uniden develop such a scanner.

Any help would be appreciated.

Respectfully,

Scott Carpenter
Bearcat Product Manager

12345. SF preprogrammed freqs, mystery trunked?

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-12 21:51:31 UTC
From: John Smith
Topic: 12345 Message: 12345

When I got my 780 a few years ago, I used the dial-up feature to call the telephone number in Massachusetts. Using my external modem I download my zipcode's frequencies directly into the scanner, and their data included labels. Iirc, this filled up about 3 banks of freqs. As many of you know, and more would expect, a lot of those labels/freqs are wrong.

Today I was playing with the scanner and inadvertantly hit the trunked button, turning off the trunking. I noticed that on a number of the remotely programmed frequencies I was getting sounds similar to SF's trunking, and that these freqs were labelled by Uniden as San Francisco PD, but these frequencies aren't in Kelty's TRS California book. If I turn trunking on, the data noise will cease and the scanner no longer stops on these freqs (I set them as M2 at some point in the past), but I've never noticed traffic on them so I suspect it is only part of a trunking system and I'm missing the control channel, or it's not a MotoII system.

Here are the freqs which produce data tone, all labelled "San Francisco PD":
857.4875
859.4875
860.4875
858.4875
856.4875
Other preprogrammed freqs in that range with the same label but which seem silent in both trunked and non-trunked mode:
860.4625
859.4375

Does anyone here know who is using these?

12349. Major bad doings in SF

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-13 05:40:17 UTC
From: John Smith
Topic: 12349 Message: 12349

Multiple code 33s in the Mission/Bayview (A3 & A4). Two officers injured while persuing a 219 suspect at 17th and Delores (caught), injuries are major, one officer with head injuries is unconscious and has labored breathing. Update: 4 officers down, 2 unconscious. Car collision at that intersection.

Other simultaneous code 33 in the Bayview where an officer has found a person shot (that seems to be getting a back burner, he probably took the code 33 to another channel).

Never heard a sargent swear on the air before . . .

12350. SF Fire/Medical response

The SFFD is on Fire A3 and A10 on these two (officer MVA and seperate shooting) incidents.

Gunshot victim was apparently driving a car when attacked, wounded in the leg and buttocks, car has been shot several times. Considering the area I suspect rival drug sellers.

Sorry. It's a stabbing.

Before the accident I was listening to an officer describe the suspect and (probably with the stabbing victim) describing where the suspect was (went into a laundramat, then came out). I'm not sure, but based on the number of officers involved and the apparent lack of civilians, it seems likely that there were two police cars which collided at that intersection. I'm not going to go look. One could easily imagine that the blue lights flashing on the buildings would seem to be from their own car . . . I expect these officers were trying to get to the suspect code 3 (um, lights and sirens) to back up the on-scene officer, but they were told to turn the sirens off by the officer on the scene (to prevent suspect flight).

Coming from different directions at a fast speed, no sound, the same lights on top . . .

One officer seems to be especially badly injured, it was upon viewing that head injury that the sargent swore.

And THEIR "Code 33?" Ofcr needs help? Freq on stand-by? Burg Alarm? Traffic Break?

I think the fire service is on the right track by using plain talk rather than codes. Not that they need to make it easier for US, but when mutual aid kicks in, codes just make things more difficult. OTOH, law doesn't do REAL mutual aid like fire does every day.

Harry

says CODE 33= EMERGENCY-DO NOT TRANSMIT

Generally, I think of code 33 being more like the channel is restricted for that particular event, until there is a code 4. The notion of "Do not transmit" seems out of place.

CDF says "emergency traffic only" when they want to restrict traffic,
and "resume normal traffic" when the frequency is released.

I am sorry to report that we lost one of the officers involved in last nights accident at 17th and Delores. They were responding to the arrest of a suspect that brutally stabbed his girlfriend yesterday, her eye was gouged out with a knife. I will pass on any info on a fund for the family. A second officer is in "very critical condition" at SFGH. No word on the other two officers. Needless to say, but a tragic night for S.F.P.D. please keep all of them in your thoughts.

219. Every person who unlawfully throws out a switch, removes a
rail, or places any obstruction on any railroad with the intention of
derailing any passenger, freight or other train, car or engine and
thus derails the same, or who unlawfully places any dynamite or other
explosive material or any other obstruction upon or near the track
of any railroad with the intention of blowing up or derailing any
such train, car or engine and thus blows up or derails the same, or
who unlawfully sets fire to any railroad bridge or trestle over which
any such train, car or engine must pass with the intention of
wrecking such train, car or engine, and thus wrecks the same, is
guilty of a felony and punishable with death or imprisonment in the
state prison for life without possibility of parole in cases where
any person suffers death as a proximate result thereof, or
imprisonment in the state prison for life with the possibility of
parole, in cases where no person suffers death as a proximate result
thereof. The penalty shall be determined pursuant to Sections 190.3

12368. Air band listening yahoo group

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-13 13:46:42 UTC
From: neilbell_99
Topic: 12368 Message: 12368

I know there is a group dedicated to air band in the west and
southwest US - anyone know the group name?

Also, there is another group for scnner listeners in Nor. Calif and I
can't remember that group name either

Any help appreciated, on the group or by e-mail to
neilbell@...

12369. Colorado fire links

12372. Re: [bayscan] Major bad doings in SF

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-13 14:11:47 UTC
From: Kenton A. Hoover
Topic: 12349 Message: 12372

Most of the APCO brevity codes turn out to use as many or more syllables as plain language. For example, '10-4' and 'copy' are the same, and '97' and 'on scene' are the same. However, it's almost always "I'm 97", which means that 'on scene' wins. Given trunking systems, et al, the need for brevity codes went out the window, except as cant so that some people to seem more accomplished than others. I'd figure having the vehicle code section numbers memorized would be enough for that. :-)

From: John Smith
Topic: 12358 Message: 12375

I'm angry and very sorry to wake up and read that one of the officers died. I'm looking forward to the family's fund information. My hopes go out to the second officer, I wish there were something I could do to help. FWIW, last night officers on the scene asked for 4 ambulances in total, but described one of the injuries as "lacerations" and I had the impression that the 4th officer had minor injuries not requiring hospitalization. The final ambulance was told that they would probably not be needed.

I heard that meyhem call on Tuesday around 4:45 PM (on Turk Street). Originally there was some incredulity when the woman called in that "he'd poked out her eye and she's holding it in her hand" but, surprisingly, it turned out to be accurate. She was asleep when he stabbed her in the eye, he also stabbed her in the chest and leg, iirc. Initially the parties involved were reluctant to cooperate, but I'm glad this guy will be off the street. I guess that bastard will fry now, if found guilty.

> I am sorry to report that we lost one of the officers involved in last nights accident at 17th and Delores. They were responding to the arrest of a suspect that brutally stabbed his girlfriend yesterday, her eye was gouged out with a knife. I will pass on any info on a fund for the family. A second officer is in "very critical condition" at SFGH. No word on the other two officers. Needless to say, but a tragic night for S.F.P.D. please keep all of them in your thoughts.

Indeed, some years ago Lakewood Colorado did a statistical study of "codes" vs "clear speech," and clear speech was shown to be more efficient, with less airtime used and fewer needs to repeat.

See: http://www.apcointl.org/research/53.pdf

Prob like most all "brevity" codes... arbitrarily. And it's likely stayed "just because." As in all agencies.

Most of the San Jose brevity codes are the penal code, i.e. not arbitrary.
10851, 211, 314, etc.

Maybe Colorado is different. ;-) Or, more probably, the study was flawed. When you listen to one of the senior CHP dispatchers working a busy afternoon around here, it's hard to believe that brevity codes aren't faster than speech.

Count your repeats, and count syllables. Also, CHP has a brevity advantage in using all numbers for units -- this tends to go faster than the 'One X-Ray Seven Boy" that San Francisco is so into.

(Yes, I know the arguements for beat numbering...)

From: John Smith
Topic: 12349 Message: 12384

Yes, and there are other benefits as well. As in any industry a special jargon is developed to distinguish those "in the know" from those who aren't members of the group. Think about whatever industry you work in, there are all kinds of examples, and plainspeak would often work, but the shorthand is used. Another benefit is that the codes standardize the way the content is delivered, promoting common understanding to those familiar with them. There are a lot of ways to say "I'm done eating lunch now", but "10-8" let's everyone know unambigiously that the unit is back in service. A final benefit is that the codes used should be sufficiently well thought out as to avoid similar sounding messages seeming appropriate for the context. I think you know what I mean here even though I'm (ironically) not explaining it well. 10-1 (I didn't understand that) sounds quite different from 10-4 (I understand).

I'm sure some will view the jargon as a form of elitism, and in some small way it is, but it's true that every group of people has their own jargon. Additionally, speaking in code assists officers in restricting information to people (witnesses, suspects, bystanders) who might get inappropriate information by simply overhearing the officer's radio. My favorite example of this is "Are you 10-34?" which means 'are you secure so that the person you're asking for information about can't hear these results?' Another is "May I have a 10-25 please?" which is 'Please send some backup over here' without making it obvious that the officer is expecting trouble.

I'd be surprised if there are any Bay Area PD departments which use plainspeak.

Reno,

It's like a forgein language. If you are not fluent
enough you have to translate the meaning into the code
then say it then the listener has to decode it. That
takes more time to do and unless everyone is fluent
can cause mis-information or a request for
clarfication. Clear Text is much easier to "learn" and
use because it's innate to us.

Tim

I don't understand the problem about codes. Between the Internet and books like Keltys, you can find codes for just about any jurisdiction. Simply join the different lists, check files and you can have all of them at your disposal. I have socalscan, cencalscan, scannorcal , norcalfire , scansacramento , you get the idea. As far as using code vrs plain language , its much easier and quicker once you learn the codes. Remember, an officer in San Francisco has little use for CHP, OPD , Marin codes etc. The codes are NOT made up for OUR benefit. If you want to monitor all these jurisdictions, just do a little research and you have them.

I disagree, SFPD uses lots of codes that only they have, look at there lists, OPD does the same, I still don't know plenty of OPD codes by memory. Since I grew up in SF, there codes are easy for me. But to someone who moves there from, say LA, I can see where it takes some time to get used to them. As far as a study saying plain language is better, I believe "studies" (of anything) can be made to show you point of view, I find codes much easier to understand. Consider this, we only have 10 digits in our system, but 26 letters in the alphabet. You have much less combinations of numbers than combinations of letters. 211 is much quicker that "armed robbery" ...I could go on and on, but, Nah
my 2 cents

Tim, I disagree. It is much easier to distinguish. I can understand code talk much better that plain language. for the reasons I already stated. I work for a company and we used to have radios, we started using a limited number of codes and everyone agreed it was easier and there was less 10-9 in that way. Lakewood, Colorado, I am sure, doesn't have the radio traffic that either SFPD, OPD or SJPD have.....especially at night LE has much more radio traffic than fire.

There can quickly be a problem, however, when it comes to "interoperability," mutual aid, and simply assisting adjacent (or co-located) jurisdictions on isolated incidents. An officer responding to another agency's request for asssistance really doesn't have the time to search the internet, email lists, etc to find out the meanings of the other agency's codes. Other than a few penal, vehicle and other code sections used regularly, there are HUGE differences in meanings between various code systems, even between neighboring agencies.

I would regard the "airtime issue" as secondary, even if the Colorado study was accurate. But the ability to communicate a message can be seriously hampered - to the point of being an officer-safety issue - by unknown or conflicting meanings of the "ten digits." Radio codes were intended to be universal, but that lasted about 15 minutes. I know of at least five different meanings for "33" (as in Code 33 and 10-33), just within California. I simply don't see the problem with speaking plain English. By the time you're hired as a cop you presumably already know it. And it's the same in Sacramento, San Jose and Los Angeles. And in the cities immediately adjacent thereto, who use completely different code systems.

Perhaps it's time for this to go to another list, such as calscan-OT@yahoogroups.com ? Nobody's changing anybody's minds anyway.

Harry

In case some of you missed it I posted the article from the Chronicle about the crash in SF yesterday.

San Francisco -- The death of a San Francisco police officer whose patrol car collided with another in the Mission District stunned many in the department today as they mourned his passing and waited for news of three others who were injured.

Officer Jon Cook, 38, of San Francisco was killed about 10:30 p.m. Wednesday when the police car he was driving collided with another one at 17th and Dolores streets. His partner, Officer Mike Celis, 34, sustained minor injuries.

The officers in the second car, David Lee, 22, and Nicholas Ferrando, were also hurt.

Ferrando, 25, suffered serious head trauma and brain swelling. He was listed in critical but stable condition today at San Francisco General Hospital, authorities said.

The officers, two in each car with emergency lights on and sirens blaring, had been rushing to help arrest a man suspected of gouging out his girlfriend's left eye when they crashed, police said.

David Williams, an employee at Maxfield's cafe at 17th and Dolores, saw a blur of vehicles collide.

"I saw a flash of lights and sirens. One police car had already gone by, and then I just saw two coming and then, slam," Williams said.

Cook, a former member of the U.S. Air Force, was assigned to the Mission police station, just blocks from the crash site. He had been on the force only since April 2001. His family lives in Oregon, and relatives were expected to arrive in San Francisco today.

Officers held a vigil today for Ferrando, whose father, Ernie, is a San Francisco police special investigations inspector. Nicholas Ferrando joined the force in January 2001, the same time as Lee, whose father, Frank, is a police sergeant with the department.

Celis, who joined the force in October 1999, and Lee might be released from the hospital today, said San Francisco General spokeswoman Gloria Rodriguez.

A somber Police Chief Fred Lau said today that officers were struggling to cope with Cook's death while at the same time hoping that their injured colleagues would recover. Officers from throughout the department stopped by the hospital today for updates.

"Everybody is devastated," Lau said. "He was a very hardworking, enthusiastic young officer. Being a police officer was his life."

Saying his department was like a close-knit family, the chief said, "We're just hoping the other officer pulls through."

The crash came as police closed in on Monte Haney, a convicted felon who police say savagely beat and stabbed his girlfriend before mutilating her face.

The four officers were rushing to back up Officer Janet Warner, who was about to arrest Haney, who had been the subject of an intense manhunt all day. He was later arrested.

Neighbors and well-wishers stopped by the crash site today, where an impromptu memorial of candles and flowers lay on the ground in Cook's memory.

Wiping away tears, Eddie Brezeda lit a candle today, saying he wanted to pay his respects to an officer who served his neighborhood. "Our hearts and blessings go to the fallen policeman," Brezeda said. "The three policemen who were hurt, we wish them good health."

According to witnesses, one police car had gone westbound on 17th, slowing as it went through the intersection. Then a second car followed west on 17th at high speed and struck a third police car making a turn from southbound Dolores onto westbound 17th.

Both damaged cars ended up on the sidewalk at the northwest corner of 17th and Dolores. The car that had been turning from Dolores flipped over, busted in a garage door and came to rest.

The second car remained right side up, facing south on 17th. One of the officers may have been thrown from his vehicle and was found by witnesses seated at the northwest corner of the intersection.

Neighbors said one officer was lying in the overturned car, half in the car and half on the pavement. He was bleeding badly.

Ferrando had been hit in the upright car and was pulled out on the pavement, witnesses said. His partner was apparently able to move around on his own.

Some of the officers responding to the scene were moved to tears and had to be consoled by others.

Williams said he quickly went out and began surveying the damage. One of the police cars was lying upside down, its trunk poking into a garage. He saw a second police car pointed in the opposite direction on the sidewalk.

Williams first spotted one officer in the overturned car, half of his body lying on the pavement. He feared the officer had already died.

"I knew once I looked at him," said Williams.

Williams went over to a second officer who had been pulled from the upright car. He said he began holding the unconscious officer's neck, trying to reassure him.

"I said, 'It's going to be all right, stay with me,' " said Williams. "But he never opened his eyes, he could never really respond."

Williams isn't sure how fast the cars were traveling, but he said they were moving very quickly.

Another employee at Maxfield's who declined to give his name said the drivers of the two police cars did not appear to see each other.

"They just both collided in the intersection," he said. "It's a blind corner, and they didn't see each other."

Tom Erikson, who lives several doors down from the crash site, said he didn't hear the sound of brakes before the accident.

"A lot of times you hear skidding, but here, it was just impact," he said.

He said the intersection was quickly overrun with police officers and paramedics, then cordoned off.

Lau addressed reporters outside the hospital earlier today.

"The officers were responding to a very serious incident," said Lau. "The officers were doing their jobs."

Lau declined to go into the details of the crash. He described the officers as "younger officers," but he said they were capable.

The chief said the accident dealt an emotional blow to many of his officers, not only those who responded immediately to the accident.

"We're all family," said Lau. "You can imagine what it's like to lose a member of a family. It's something that is very difficult to talk about."

12401. Bay Bridge encore for 4 giant cranes

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-14 06:47:32 UTC
From: robert sanford
Topic: 12401 Message: 12401

Im not sure what frequencies to monitor but I would think the following would be good:

CHP-Marin-42.160
CHP-Oakland-42.130
CHP-SF-42.440
450.0875 KCBS 740 News

01A 156.050 156.050 Port Operations and Commercial.
VTS in selected areas.
05A 156.250 156.250 Port Operations. VTS in Seattle
06 156.300 156.300 Intership Safety
07A 156.350 156.350 Commercial
08 156.400 156.400 Commercial (Intership only)
09 156.450 156.450 Boater Calling. Commercial and
Non-Commercial.
10 156.500 156.500 Commercial
11 156.550 156.550 Commercial. VTS in selected areas.
12 156.600 156.600 Port Operations. VTS in selected
areas.
13 156.650 156.650 Intership Navigation Safety
(Bridge-to-bridge). Ships >20m
length maintain a listening watch
on this channel in US waters.
14 156.700 156.700 Port Operations. VTS in selected
areas.

The third time's the charm. Another set of giant cranes will be shipped underneath the Bay Bridge during the late-morning rush-hour commute.

About 10 a.m. Friday, four giant cranes will glide underneath the span with about 26 inches to spare. The California Highway Patrol will briefly shut down on-ramps to the bridge in San Francisco and slow down traffic in both directions as a precaution.

Caltrans is recommending that motorists take alternate routes or forms of transportation. But no major backups are expected, officials say. The last crane delivery on May 1 occurred without a hitch.

"We're very happy with the way that commuters took our message to heart last time, and we hope they do so again," Caltrans spokesman Jeff Weiss said today.

"This is kind of like the grand finale of this particular series of crane deliveries," said Marilyn Sandifur, a
spokeswoman for the Port of Oakland, where the cranes are headed. The cranes are arriving from China atop a specially designed freighter.

The cranes, which some say resemble giant white horses, were manufactured by the Zhen Hua Port Machinery Co. of Shanghai and will have weathered a long, transpacific voyage. As they head toward the Bay Bridge, engineers on a ferry and atop the cranes will communicate by walkie-talkie to track the operation.

The Chinese freighter will be guided by a bay pilot and several tugs.

In October 2000, motorists were stopped for 11 minutes about 5:30 a.m. when four giant cranes made their way through the San Francisco Bay with just 25 inches between the top of the cranes and the bottom of the Bay Bridge.

Gawkers lined the Embarcadero to watch the spectacle, as they did on May 1 when the cranes passed through with an ample 5 feet to spare. Friday's clearance will be about 26 inches, Sandifur said.

The cranes will first pass underneath the Golden Gate Bridge about 7 a.m., but traffic on that span won't be affected because the cranes are expected to clear by 7 to 10 feet. But the CHP will slow down traffic ont 10 minutes to make sure that the cranes pass underneath the span safely. The weight of the cars actually dips the bridge a little,and engineers need all the inches they can get to make sure the cranes make it through, officials said.

To slow down traffic, CHP officers will be conducting "rolling breaks," in which patrol cruisers weave back and forth in front of cars.

12402. Crane Traffic

I think the best thing to know the location of those huge cranes coming into the Bay today (around 8:00 am ETA going under the GG Bridge) should be the vessel traffic service on 156.700. Its basically like "air traffic control" for the large vessels that enter the bay.

There is some good information on how the system works at:

http://www.uscg.mil/d11/vtssf/commguid.htm#OffshoreSector

12405. Foster City Tac Alert

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-14 21:53:25 UTC
From: Tim XXXXXXXXXXXX
Topic: 12405 Message: 12405

Foster City PD declared a "Phase 1 Tac Alert" around
2:35PM this afternoon for a bank robbery situation on
Hillsdale Ave. Staging area is the Safeway at 921 E.
Hillsdale, and right now they're concentrating in
maintaining a perimeter & getting more units on scene.

They mentioned two semi-automatics observed, so I'm
assuming there are at least two suspects.

488.9375 (114.8) is the main channel in use at this
time, but some comms are on 488.7125 (114.8Hz) TAC-2 &
as units from other departments arrive on scene to
assist, they might all switch over to the countywide
mutual aid channel ("Green," 488.8875MHz).

OK, they're switching to the Green channel & will
have a Code-33 in effect in it now.

I used to work for Caltrans in the Bay Area, so I can provide some insight into their radio communications. Caltrans in the Bay Area (District 4) primarily uses the Motorola Spectra 9000 radio. Some of the freqs that I have are listed as trunked and non-trunked. Since I work for Caltrans, I've never really been interested in monitoring them. So I'm not real sure about their accuracy.

I think these are some that might be in your area, but again, I'm not sure about the accuracy. Give them a try.

Three kids got hurt this morning. One young teen got stepped on by a bull, and among his symptoms was a loss of sensation in his legs :-(

Unfortunately, he was the least badly injured of the three. The other two both left by helicopter, in "critical" condition, headed for Children's Oakland. I didn't monitor the nature of their injuries.

I almost took my kids to see this rodeo today. I'm glad I didn't.

I've just started to monitor the incident.

Medic 36, 37 and 45 plus two air ambulances and a coroner. I'm thinking
it's a multiple accident.

As writing this, a third air ambulance will be dispatched.

Anyone copying what's going on? I'll post what's happened as soon as I
find out. Parish Road and Lopes, off Interstate 680 is what I'm picking up.

Scott

Solano Dispatch 156.000

Reach 3 came over and said they'll be monitoring 123.020 Mhz.

Still no info. Solano Fire and Fairfield Fire at scene. Lopes and Parish road. This is the frontage road off Interstate 680 (confirmed location).

All of a sudden I'm hearing what sounds like SF Traffic/VTS (normally on Marine 14/156.70) on Berkeley Fire #1 (154.19) ... also what sounds like a Code 33 tone ... neither dispatcher seems aware of the other, so I'm wondering if it's just me? I didn't do anything to my rig or my antenna.

And it's LOUD AND CLEAR.

From: goldwinger16
Topic: 12442 Message: 12442

Sound pretty much like they are in mop-up stage now. Ben Lomond crews 1 and 4 coming in. They are starting to release some units. I don't believe command 13 is repeated. For Santa Clara County Fire , main dispatch 154.25 and Command 2 (155.895) are repeated. I normally monitor 154.25 and CDF for fires in that area. ((CDF is using Tac 9 for this.....151.385)

Walnut Grove is a bit busy with two medical aids, 1
Motorcyle down on Andrus Island, and another CPR with
CHP onscene in the same area. 2 ground ambualnces from
Galt and 3 helos H-20, REACH, and LifeFlight, in
route.

Solano just toned VacaValley FPD for a T-1 or 2 for
structure protection on Pleasant Valley....damn I glad
I left the Crawdad Festival early

Ed,

What do you have as a freq for CZU? I have two listings I had obtained
from the same source. The first listing has CZU as 151.370 but the
updated
listing is listing it as 151.170. Any info would be appreciated.

From: Tim XXXXXXXXXXXX
Topic: 12480 Message: 12480

Kelty's 'red' book book (page 4) has one list, and the "Freq of Nature" CHP web page has a different freq plan for the CHP Tac channels.

For example, Kelty's CHP Tac-1 is listed as 45.020 (42.260 input), and FON's CHP Tac-1 is listed as 44.860 simplex.

I'm tempted to go with Kelty's list --especially after just looking at FON's California Fish & Game web page & finding what I believe to be numerous errors in it.

The channel plan for the BC-780 in my vehicle is pretty packed, so I can't afford to tie up any channel capacity with bogus info, hence this post.

I'm pretty sure the Air Boss will be talking in the aircraft - not us.
We'll be there simply for additional LZ Security for our aircraft at least.

Tower: 119.0
Ground: 121.6

If I find anything else out, I'll advise.

An option I'd like to see on scanners:
Some sort of audio compression scheme. I hate it when listening to an agency with low deviation, forcing me to crank
up the volume, then the radio stops on a much louder station (usually a fire channel) and blasts me right out of my car.

Fire personal are not radio shy.

I would go a step further in scanner audio and put in a MP3 recorder. It is really stupid that you need a PC to save scanner recordings. What you would do is tag the MP3 audio with the frequency and time so that if you are scanning many channels, it would be possible to reconstruct the audio for each individual channel. That is, link up all the MP3 for a particular frequency in chronological order.

When I record scanner audio in very remote areas, I use an old Sensory Sciences MP3 recorder. This particular model can hold 4 hours of audio and has a line input (rather than just a microphone). You need a mini-jack Y connector and a set of ear buds to monitor the audio at the same time.

The Cannon Fire has claimed human life, a C130 tanker went down, no
word on the crew, but witnesses including a Channel 4 news (Reno NV)
Cameraman witnessed the crash and immediate fireball.

At the same time this is going on, a Tanker (truck) has rolled,
Lifeflight out of Washoe Med Center is enroute as there are injuries.

(some details available on the KRNV web site, www.krnv.com)

Thunderstorms Delay Shuttle Landing

By MARCIA DUNN
.c The Associated Press

CAPE CANAVERAL, Fla. (June 17) - Thunderstorms forced NASA to postpone Monday's homecoming for the three men who are returning to Earth and the arms of their loved ones after a record-setting stay of more than six months aboard the international space station.

More rain was expected for Tuesday's landing attempt by space shuttle Endeavour, and gusty wind was forecast at the backup site in California's Mojave Desert.

''Tell everybody waiting on the ground, we're sorry,'' shuttle commander Kenneth Cockrell said after Mission Control called off Monday's landing. ''We'll try to see them tomorrow.''

Cockrell later requested a radio hookup with the relatives who were waiting for them at the Kennedy Space Center. The crowd included the three wives and nine children of the returning space station crew, in orbit since December.

U.S. astronauts Daniel Bursch and Carl Walz and their Russian commander, Yuri Onufrienko, logged their 194th day in orbit Monday. The Americans broke NASA's 188-day space endurance record last week.

The three should have been home long before now. But Endeavour, their ride home, remained on the ground an extra month so that the shuttle astronauts could train to repair the space station's robot arm. Then stormy weather and a leaky shuttle valve added another week's delay.

Endeavour finally took off on June 5 with a new three-member crew for the space station.

The shuttle has enough fuel and supplies to remain in orbit until Thursday.

If it lands at Edward I'll try to get out there and shoot some Video and or D-Pics. I'm only about 2 hours away.

Does anyone know/have a freq to listen to shuttle in the Las Vegas area?

From: gary
Topic: 12505 Message: 12509

You are more like 3 hours away I think. ;-) I may get up at 0 dark thirty and if Edwards is a go, I'm there. You can check out http://www.lazygranch.com/edtrunk.htm for the Edwards trunk info and http://www.lazygranch.com/shuttle.htm for the landing I attended. Bring one of those camping folding chairs and sit by the fence. If you want to photograph the event, the place not to do it is from the bleachers. They shake as the crowd moves, and your video and/or photos will be ruined.

The really annoying thing is at they change the landing sites at the last moment, that is, between orbits Florida may clear up so they scrub Edwards.

Here is the Edwards public affairs number: Public Affairs: (661) 277-3510. Hope you have analog fallback on your cellphone.

Be sure to verify the TIME zones... last time they landed at Edwards I drove out there from Simi using the times they broadcast from Houston... only to realize they were giving all landing times as MOUNTAIN (Houston) time... so I was late by an hour+

Heard yesterday on Control - 91:
Dispatch: "Unit xxx, are you 97 yet?"
Ambulance: "Almost, give us 10 seconds."
D (literally 10 seconds later) "Unit xxx, times up, I'm marking you 97."
(about 10 seconds later)
A: "Do you have a gate code?"
D: "Try 2000#."
A: "Negative."
D: "Hmm.. try 2002? This sheet may be two years old."
A: "BINGO!"

If was a pretty short test... there is SOME lag one way or the other between audio and display, but hard to ID who everyone is, so hard to tell if display is accurate or how long (or shorta) the lag is.

perhaps if you do some "manual" scanning on and off of a known, identifiable channel, such as ONE of the NOAA broadcasts and other scanning?

From: gary
Topic: 12486 Message: 12517

A government facility that shall remain nameless uses month/day/year as their combination. Well, at least they change the combination every day. '-)

OK, I heard this over the FBI repeater in the clear, and no, its not FBI property, though the FBI can sometimes be found there... Damn, said too much already. The fact that is was the FBI in the clear is a good clue.

12518. RE: [bayscan] Thunderstorms Delay Shuttle Landing

Here is the latest update:
==========
Rain showers, thunderstorms and gusting winds at KSC remain a concern for Tuesday's landing opportunities, which are scheduled for 11:55 a.m. EDT (1556 GMT) and 1:31 p.m. EDT (1732 GMT).

Across the nation at Edwards Air Force Base northeast of Los Angeles, high winds are forecast to get in the way of landing there, which is possible at 3:00 p.m. EDT (1902 GMT) and 4:36 p.m. EDT (2038 GMT).

Mission managers would consider landing Endeavour at Edwards on Tuesday only if the weather forecast for landing on Wednesday looks bad at both sites, said NASA mission commentator Rob Navias.
=======

Special for Harry: times are EDT ;-)

I don't think most combinations are "state secrets" .. when I worked alarm response for a security co in L.A., if we didn't have a needed gate combo I'd always try either the street address or the last digits of the business' phone number. 3/4 of the time it would let me in. They often had to be simple enuf for employees to remember!

12520. Is alameda FD Tac 4 wide or local

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-18 03:42:51 UTC
From: Ben Kellogg
Topic: 12520 Message: 12520

I guess people who are seeing my cam are the best to answer this question.

Problem: When alameda talkgroups pop up on my scanner, there is no sound, the EXCEPTION is alameda FD tac 4 which comes in clear when someone is on it... Can someone who is familar with the ins and outs of alco comms give me the answer to why this happens.. is it because alameda is using all local channels but tac 4 or is someone wrong on my setup?

thanks in advance

12523. Cannon Fire

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-18 05:12:27 UTC
From: Bundy Chanock
Topic: 12523 Message: 12523

Sorry, Jake. When I said Walker area fire, I didn't mean the Walker Fire. Gotta love their naming scheme.

One of my very first paramedic posts was the town of Walker, when I worked for Mono Co. Rescue in 1978.

My first wife was born and raised up the road in Coleville.

I guess they're calling it the Cannon Fire. No towns very close by to evacuate to, except Bridgeport or north up in Douglas Co.

Mono Co. is a big county for it's population. We used to do 3 on - 3 off and Walker was over 100 miles from where I lived in Mammoth. Love to be able to listen to Mono Co. Sheriff's right about now.

Bundy

That's cool - NIFC cleared me up real quick. That daily update is sure handy to have. ;) Head up the yinyang with a wedding in two weeks so I'm so lost with things lately. Tanker crash really woke me up though. That and the quake today. Odd things that normally don't happen. Sick feeling in stomach after hearing about the tanker. Prayers are with them...

Most of the gated communities I deliver to have gate codes with some
sort of geometric pattern to them, or go right down the center with
the code. A couple of them have the #2002 code.

Topic: 12532 Message: 12532

I lived in a condominium at one time which had an electric gate to the garage. One day I tried my Motorola "2135" key in the lock and it worked.

For those of you who don't know what a 2135 key is, it's the key which opened the radio case for installation and repair. Those of us running Motorola equipment on the ham bands always had a 2135 on our keyring. Similarly, GE radios also were locked. I remember having an LL10 key for one of them, probably a Master Pro. (Now everyone knows I'm ancient.)

The website photo and safety info page says that CB and VHF/UHF radios can cause interference to the aircraft and are not permitted at the show. That's interesting! I used to take my ham HT with me when flying and never caused myself any interference.

Guess all we can take with us to the show is a scanner(s).

12534. Re: [bayscan] Vertical Challenge 2002

From: caladded@aol.com
Topic: 12533 Message: 12534

Are you referring to the Helicopter show at San Carlos? What do they do with some guy 1/2 mile away with a 1000Watt liner on his CB? I think they are just being overly cautious. Heck, I don't really know of anyone with a CB like that, BUT people (especially truckers) are going right by the airport on 101 with CBs all day long.

At the Redding Air Show they had the exact same warning on there, no CB, VHF, or UHF equipment will be allowed. Of course I arrived at the gate to cause trouble with multiple radios etc. but went through with no hassle. Darn - can't poke the bear ;) Once inside, there wasn't less than 1 FRS radio to 5 people.

I suggest bring all you want, but respect the wishes of the people at the gate.

Here is the latest in the ongoing saga of Marin Country and their new "getting old" radio system.
I wonder when and if this is ever going to happen?? Its fine with me since I dont know if we are going to be able to monitor this system since it is suppose to be digitally encrypted, but then again who knows.

Alternate antenna site considered

By Carla Bova and Richard Halstead

Plans to build a controversial 73-foot public safety radio antenna at 99 ½ Mt. Tiburon Road in Tiburon have been put on hold while the Tiburon Town Council decides whether to pursue an alternative site on Sugar Loaf Drive.

Residents who live near the proposed site on Mt. Tiburon Road have vehemently protested the antenna near their homes for health and aesthetic reasons. Tiburon officials have refused to grant the Marin Emergency Radio Authority permission to build there and threatened to sue the Radio Authority - to which it belongs as a member.

But Radio Authority Executive Director Martin Nichols said he believes residents near the Sugar Loaf site - which include Lars Ulrich, the drummer for the rock band Metallica - will be just as active in their opposition.

"He owns the adjoining property; the antenna would look out across his swimming pool," Nichols said, referring to Ulrich.

The Sugar Loaf site has other problems as well, Nichols said. An antenna at the Sugar Loaf site would have a greater visual impact than at the Mt. Tiburon site because Sugar Loaf is higher, and the analysis of the environmental impact on Sugar Loaf is less complete than that done for Mt. Tiburon, he said.

Months behind schedule and about $1.4 million over budget, the radio authority is struggling to secure the last antenna site crucial to a $26.9 million countywide public safety radio system.

The Tiburon Town Council will conduct a public hearing on the Sugar Loaf site when it meets at 7:30 p.m. tomorrow in the Council Chambers at 1505 Tiburon Blvd.

Town Manager Alex McIntyre said letters notifying residents in the area have been mailed to 150 homes. "Thus far, there have been no phone calls on the topic," McIntyre said.

He said Tiburon's council will discuss taking the following three actions:

-- Assuming the responsibility of leasing the Sugar Loaf property, a water tank owned by the Marin Municipal Water District on Sugar Loaf Drive off Place Moulin.

-- Becoming the applicant for the land-use permit.

-- Adopting an ordinance that changes land-use practice so that the Town Council itself can become the hearing body for this application.

This way, the site could bypass design review and the Planning Commission, and be handed over to MERA by mid-July, McIntyre said.

Nichols said that the radio authority has agreed to delay beginning construction at the Mt. Tiburon site at least until the Tiburon council meets tomorrow. The radio authority's board will meet at 10 a.m. Thursday at Pickleweed Community Center in San Rafael to chart its next move, Nichols said.

Last month, the radio authority resorted to an eminent domain proceeding to acquire the Mt. Tiburon property - paying the Marin Municipal Water District $160,000 for the land.

By acquiring the site, the radio authority believes it gained the power to supersede the town of Tiburon's refusal to grant it approvals. In 2000, the Tiburon Planning Commission unanimously rejected the radio authority's request for permission to build there.

After completion of the eminent domain proceeding, however, Tiburon officials indicated they might go to court to stop the radio authority.

"The council certainly was considering challenging our ability to proceed without a permit," Nichols said.

The town of Tiburon and residents who live near the Mt. Tiburon site would prefer that the radio authority build the antenna on Wolfback Ridge above Sausalito.

"Wolfback Ridge remains certainly the preference of the town and the neighbors," said Howard Zack, whose property line lies about 10 feet from the Mt. Tiburon site. Zack wouldn't say if he would support the Sugar Loaf site.

Last week, however, the radio authority's board ruled out the Wolfback Ridge site after taking a second look at it, Nichols said.

The Wolfback Ridge site would not provide radio coverage for downtown Sausalito, Nichols said. That is because the antenna would have to be pointed downward and its power kept low to keep it from interfering with signals in San Francisco and other points to the south, he said.

In addition, Nichols said it would be difficult to get a county permit for the Wolfback Ridge site because it is on federally-owned Golden Gate National Recreation Area property.

"Even if we were able to get a permit it would delay the project another eight to nine months," he said.

From: gary
Topic: 12533 Message: 12537

Most likely they will hit the KSC target at 7:52AM PDT. The second KSC target (9:28AM PDT) would probably not work due to weather, so if they miss the first KSC slot in the AM, a landing at Edwards is most likely. That isn't much notice for those in the bay area, with landings schedule at 10:58AM PDT, 12:34PM PDT, and 2:10PM PDT. Edwards weather will be perfect.

Fully story here:
http://www.space.com/missionlaunches/sts111_update_020618.html

At the nearby Mojave boneyard, er, airport, there is a scheduled test by a private rocket company, XCOR, of the EZ Rocket. Photos can be found here:
http://www.xcor.com/
========
The EZ-Rocket will make its next flight at the Mojave Civilian Flight Test Center on Wednesday, June 19th at approximately 9am. This schedule is tentative and subject to change due to weather and wind conditions and flight readiness.

If you wish to attend the flight, please contact Aleta Jackson at (661) 824-4714 or ajackson@....

FYI, Wolfback Ridge is the old Nike site in Marin. Sausalito would be in a shadow. I don't see why the radio towers on the next hill over wouldn't work (KABL FM).

I set up www.firescan.net a little less than a year ago, but never really bothered to publicize it very well. I've just been added to this list and now that we're back in fire season, I realized that others might want to check it out.

I currently monitor 6 channels (CDF local for CZU, BEU, and SCU; Santa Clara County, Santa Cruz County, and San Mateo Control 1) from 1 site and keep about 30 days of audio for all the channels. The system can decode DTMF, and both Quickcall I (2+2) and Quickcall II (1+1) two-tone paging.

Recently I've been working on software to allow remote receive sites for the system, so if anyone has a good place to put some receivers to hear additional channels that ought to be added, drop me an email.

Sure it works but you know how Motorola goes out there and loves selling
their high end 800 MHz systems. I just hope for the firefighters sake the
damn thing works..
It is suppose to be a digital system but many people I have spoken to are
betting that it might not end up being one. Only time will tell.

By the time they get it up and running that new Uniden scanner should be on
the market which will be capable of decoding digital signals.

12574. Update: Midway IC Fire-Livermore/Tracy

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-19 05:14:34 UTC
From: cowboymike1971
Topic: 12574 Message: 12574

Just got back from taking a trip over to the other side of the altamont. Lotta land burned over there.Burned right up to the AM/PM market on 580 and patterson pass if anyone is familar with that? I went out there to see If could get any shots of rigs or whatnot and got a couple. ALCO Dozer/triler 3497 I believe?? Not sure and what I believe was Lab Patrol. Big yellow engine. Just missed a convoy of CDF Type threes as they were just leaving. They had some kind of command post set up at the AM/PM for a few. I heard some good comms as I was right on top of em..(LOL) This Fire is in Mop up stages and had only a handfull of companies left on the scene.Was hoping to get some good shots of the equipt. but ran out of light. Oh well maybe next time.

How many acres of toast? Sounded like LP donated 2 patrols units.

>Burned right up to the AM/PM market on 580 and patterson pass if
anyone is familar with that?

There's an AM/PM market there? I thought it was just a deserted
offramp. Shows how much I know. I wonder if the fire started at
that AM/PM.

Whatcha gonna use the screen for? That's the question that gets asked all the time in the reviews I've read. And: what are you looking for that you think you've found in the R-3? So many scanners out there, so many different features; if you want an opinion on your decision, you need to let us know how you set it up.

I'm going to use the screen to view wireless camera images and such. It's the 2" screen the intrgued me the most because I can watch tv and view wireless camera images or images in buildings and stuff. The other part the got my attention is the wide range .5-2400 Mhz. Please if you can, give me some more feedback about this radio.

12581. UA 41 coming back to SFO

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-19 17:28:54 UTC
From: Jordan Hayes
Topic: 12581 Message: 12581

I just caught the tail end of interaction with Oakland Center (oceanic, 134.15) about UA 41 (SFO->KOA) that's coming back with 5 hours of fuel on board, asked for Center to relay to SFO tower that they'd like equipment at the far end of the runway for possible 'hot brakes' ... not sure what's wrong, but I don't think he's declared IFE.

/jordan

12582. DOJ -- 155.445 / CALTRAIN -- 160.815

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-19 20:12:34 UTC
From: Tim XXXXXXXXXXXX
Topic: 12582 Message: 12582

155.445 is listed in some sources as being a DOJ/BNE channel, and I put it into my 780s in the home & car along with other DOJ freqs.

But 155.445 has constantly had a carrier on it, with a tone every 5 seconds, since I put it in the radios last week.

The carrier is weak for me here in San Mateo.

Anyone know what's going on, and where the transmitter is?

****

Another note -- the CALTRAIN channel of 160.815 kept having a stuck mic at the dispatch center (apparently in San Jose, but with remote sites) last night. The facility had two people there in the center, and it was interesting to hear them BS a little. Finally (around 2AM) their phone rang, they debated about answering it, but after about the 20th ring they did, and it was some other CALTRAIN person, advising them of their stuck mic. The female in San Jose was totally embarrassed and of course was thinking back over every comment she uttered 'in private' for the past hour or so. She got the transmitter unkeyed, but about a minute later, it keyed itself up again. This process continued several times.

...not good. ;)

There is an Icom R-3 mailing list on Yahoo!

The biggest problems seemed to be very poor
sensativity, and an inability to select proper video
demodulation mode for a particular frequency range.

12584. CDF handling lock-outs?

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-19 20:23:51 UTC
From: Tim XXXXXXXXXXXX
Topic: 12584 Message: 12584

Around Noon, the CDF channel of 151.370MHz toned out
& *two* engines (sorry, I didn't write down the #s)
were dispatched to an address to handle a "lockout."

It wasn't specified, but I got the impression it
was someone who'd locked themselves out of their
automobile or home.

Is this something the CDF (or any fire/rescue
group) regularly handles? Obviously it's a different
matter if some infant is locked inside the home or
car, but since that wasn't specifically stated in the
dispatch, I'm assuming that's not the case. It seems
like a gross waste of resources, especially sending
two engines, and barring an emergency rescue
situation, is something that in my experiences back in
Michigan, would be handled by the PD (if at all).

The dispatch used the local San Mateo area transmit
site with 167.8Hz CTCSS, but other than that, I don't
know what CDF unit (or unit dispatched by CDF on
151.370/167.9Hz) it was.

12585. RE: [bayscan] CDF handling lock-outs?

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-19 20:42:52 UTC
From: Matthew Kaufman
Topic: 12584 Message: 12585

You can see the page at my site
http://www.firescan.net/cgi-bin/chindex.cgi?by=page&ch=0 and play it
back in mp3 audio from there.

The initial page for a vehicle lockout was on the Local 2 repeater
(Allen Tower) at 11:41 for Engine 18 (at Station 58 (Skylonda), covering
for engine 58 which was elsewhere) and for Engine 56 (the Kings Mountain
volunteer company). The page was then repeated on the Local 8 repeater
(Mt Pise). A minute later, engine 17 was dispatched from station 17
(Belmont), and engine 18 was cancelled. (Because the address, 12190
Skyline x Quail Ct, is a lot closer to Highway 92 than it is to Highway
84, where station 58 is).

The reason "two engines" were sent is that a CDF engine is automatically
sent along with the primary volunteer engine in that area. The details
of the lockout weren't provided on the air, but some kinds of vehicle
lockouts (vehicle running, vehicle running or not with pets or children
inside) do warrant a fire department response around here.

So I've got this nice 800 mhz two way radio - the sensativity on it blows away any scanner I've used.. So I'm wondering - it's got like 100 channels, and I only use about 10. Are there any good 800 mhz freqs in the bay area? Right now I have AMR, Calstar, and lifeflight. Any public safety or commerce? Yes, I looked through Keltys IRS book, nothing that I saw. It's a Kenwood, so if there's any LTR too, I'd be curious if it can recieve LTR trunked..

Thanks.

I believe Beacon Hill is the site you are speaking of. If you put the site up there, there would be holes in Marin City and the east side of Tiburon.

Start here:

http://spaceflight.nasa.gov/shuttle/

there's lots of FAQs on the site . . .

> like why can they only land at 9:28 or 10:32?

I think that's due to the fact that it doesn't fly in the same place on each orbit. Check out the real-time tracker here:

http://38.201.67.72/realdata/tracking/

Right now it just has the ISS, but when the Shuttle is up, it's on there too. But the orbit stuff is similar: it takes a certain amount of time to go around the earth, and there's only a few times per day when the orbit gets you close enough to Edwards that you can do the deorbit safely within parameters, etc. It's not like a 747 that you can just fly vectors: most of the deorbit is unpowered, and it essentially lands like you would a glider.

One of those little things that annoys me is when NASA finally decides to give up on landing at KSC, they don't announce it here until about 0900 hrs. Pacific. If you want to go down to Edwards to watch, you have very little time to get there. I might start watching the KSC weather reports myself and just pop down to Edwards if it looks likely they're coming in down there.

Which is exactly what I did, heading out late yesterday afternoon. However, the public was not allowed on base today to see the landing. Not even at the public viewing area they herd you into. Lets just say I was so far away at my vantage point that I just used the binocs to watch the dot. Had I known the public would not be allowed on base, I would have saved myself a trip and watched on TV.

I'll upload some scanner audio later and do another post. Lets just say security was really busy with people wandering around the border of the base. [Of course, had they let the public on base, there would be none of those wanderers to deal with...]

Yeah, they're setting up a perimeter around Wilfred. That's south of Santa Rosa, in an unicorporated area. They got the jacket the runner threw out, so I'd imagine the K9 will have no trouble getting a good whiff. Code 33 on 453.725.

Wouldn't beacon hill be where the Marin VOR is located? [I always figured
that was the beacon in beacon hill.] It's not quite the same spot.

Here is the VOR location:
Lat/Long: 37-51-19.203N / 122-31-21.908W (37.8553342/-122.5227522)
Elevation: 1040 ft.

KABL (or whatever is there now) is N37.85099 W122.49799

They are 1.38 miles apart.

www.lazygranch.com/sounds/shuttleland.wav

This file starts about 20 minutes before the landing and maybe 30 after the landing. No edits done and it sounds like it. Eventually this file will be replaced by a smaller one, so get it while you can.

Note that edwards has a trunk system, and you are hearing whatever comes up on the trunk.

I don't believe I suggested it was actively in use; only that the
repeater (the use of which has been offered to my agency on more
than one occasion, as recently as 30 days ago) might be stuck in
at TX condition.

Don

The people I know in the broadcast biz refer to the KABL (and others) broadcast site as Beacon Hill. As to the naming, I've found that the naming of geographical fixtures tends to predate navigational aids like VOR. Except for those on the far side of the moon, of course.

12630. Alternative site for radio tower possible

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-21 02:13:55 UTC
From: Robert W. Sanford
Topic: 12630 Message: 12630

OK here is the latest on the "dirt" regarding the proposed radio site needed for Marin County's radio system.
Personally I don't think they should even allow this idiots any input in the decision. When the next major disaster occurs (and it will) those idiots will be screaming for help and wonder why they are not getting any. This is so California!!!! You know most of the opposition is just rich #()#%*%# in Tiburon that don't want it for aesthetic reasons.

Alternative site for radio tower possible

By Gary Klien

The Tiburon Town Council voted last night to streamline the town's review process so officials can study an alternative site for a controversial 73-foot public safety radio tower.

The decision gives a reprieve to residents near 99½ Mt. Tiburon Road, where the tower was about to be built. But residents at the alternative site, Sugar Loaf Drive, came out in force last night to oppose the move, which they feared would send dangerous emissions through their homes.

"My God, you could get tarred and feathered and run out of town if you go through with this,"said resident Carolyn Friedman. "I don't know if it's worse to die a slow death from cancer or to have your town blow up. I don't know the answer to that."

But the council members, all but resigned to seeing an antenna built in town, said they were between a rock and a hard place.

"This is a terrible decision between two terrible locations," said Councilman Andrew Thompson, who wanted the tower built on Angel Island or Wolfback Ridge, on federal land above Sausalito. "The federal government, which you think is above you and there to help you, really doesn't give a damn. Unless there's something in it for them."

Months behind schedule and about $1.4 million over budget, the Marin Emergency Radio Authority is struggling to secure the last antenna site crucial to a $26.9 million countywide public safety radio system.

Residents who live near the proposed site on Mt. Tiburon Road have vehemently protested the antenna near their homes for health and aesthetic reasons. Tiburon officials have refused to grant the Radio Authority permission to build there and threatened to sue the Radio Authority to which it belongs as a member.

MERA has already taken over the land at 99½ Mt. Tiburon Road. The agency is meeting today to decide whether to halt work on the tower while the process plays out with the Sugar Loaf Drive studies. The expedited review process, by going directly through Town Council and not the planning or design commissions, is expected to take about a month.

"My sense is that we were very encouraged by tonight's meeting and the clarity of the town council," Supervisor Steve Kinsey, a member of MERA, said after the vote last night.

The vote was 4-0, with Vice Mayor Jeff Slavitz absent.

i have read all of your replies to the MERA system and i can answer some of your questions. The reason for the system is to help with mutual aid, which marin county relies heavly of both with police and fire. As far as testing the system, San Rafel PD has been testing the system for over 3 years and they seem to be satisfied with it, but it will only work if everyone is on the system, because on Control 2 (the county wide channel) no agency can communicate with SRPD, which makes it hard. And marin actually can't afford the MERA system, they got a huge state grant to pay for it. Each portiable is roughly $1200. any other questions let me know, i hope this helps.

Hi Ben,

Here is what I got from ww.Airnav.com, but I would love to have the Air Boss Freq and other airshow stuff. A few months ago when the Half Moon Bay airshow was going on San Carlos ATIS had the airshow info and freq's.

-Sagar

CTAF: 119.0
UNICOM: 122.95
ATIS: 125.9(650-593-0613) [0700-2100]
SAN CARLOS GROUND: 121.6 [0700-2100]
SAN CARLOS TOWER: 119.0 [0700-2100]
326.2 [0700-2100]
BAY APPROACH: 133.95
120.35
134.5
BAY DEPARTURE: 135.65

Ben, San Carlos Tower is 119.0 , San Carlos PD 488.4875 , TAC 2
488.7125 , TAC 3 488.5375 The helos etc will probably be around the 122
and 123 MHz area. Come early, I drove by it last year and it is real popular
and real crowded, have fun
Ed

If you had an internet service provider, you could do a google search. Be sure to get the new trunked Nevada system. Regarding speeding in Nevada, the NHP only goes after total idiots. It is the county sheriff you need to worry about.

I never speed; I'm in law enforcement myself. I just like knowing what's going on up the road.

Any tips on a site with freqs? So far no luck in Google etc.

I recall reading somewhere you need a 780 to trunk track the NHP. Anyone know if this is true and why you can't use a bc245?

I gather with a VHF system mobile extenders are not used.

This is a couple years old, but

Idaho State Police:

460.275 Primary
460.200 Secondary
460.525 Car-to-Car
460.300 Panhandle area dispatch
460.125 ??
460.025 Statewide Tactical & Mutual Aid w/locals

Not sure how accurate this is.. it worked when I was thru there in 2000.

Harry

NHP is pretty nice. They only do serious enforcement of I-80. I've been doing 100 plus on my motorcycle on US-50 eastbound and passed the NHP. They wave, as do I. The golden rule: don't speed through anything that isn't a highway (or construction or otherwise built-up). And I never, ever do, Nevada or otherwise.

Police Release Dispatch Tape from Deadly Crash
[Office Jon Cook died in a car accident last week.]
Hau Kuiang

Police have just released the haunting sounds on tape of the panic following last week's fatal crash between two San Francisco police cruisers.

"We've got officers down! We've got officers down! 17th and Dolores," an officer says frantically. "We've just been in a major 7-19."

Two squad cars were chasing after a domestic assault suspect when they collided at the intersection of 17th St. and Dolores in San Francisco. Officer Jon Cook, 38, died in the accident. Three other officers were injured.

Prosecutors have not ruled out charging the assault suspect, Monte Haney, with Cook's death.

http://www.trunkedradio.net/cgi-bin/display.pl?sid=668
This link has very detailed info on the NHP trunk system. I think you need a
780 because it has "multiple configurations":
BC780 Programming Setup
Type2 VHF
Base Config 1 Base Freq 151.010 Space Freq 15.0 Offset Ch 380
Base Config 2 Base Freq 153.740 Space Freq 15.0 Offset Ch 413
Base Config 3 Base Freq 154.650 Space Freq 15.0 Offset Ch 461

I don't have a 780 so I don't really understand the multiple base
programming. In the 245, you only have one base freq and offset to program.

12673. How easy is it to Spy on Cell Phone Calls?

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-22 06:38:39 UTC
From: Robert W. Sanford
Topic: 12673 Message: 12673

This article was on the KRON site but as many of on this list know it very easy to monitor analog cell phone calls as long as you have a scanner with that band in it as I am sure many of us do.

How easy is it to Spy on Cell Phone Calls?

SAN FRANCISCO (KRON) -- A man has claimed he was able to listen in on two terrorists plotting a 4th of July attack on Las Vegas, is that possible? Trying to track down the alleged callers sounds like the stuff of spy novels. Just how plausible is the story of a cell phone picking up what may or may not be two terrorists plotting evil? Technically, it could happen.

While the story didn't check out and the accuser failed a polygraph lie-detector test, it's not entirely outside the realm of possibility.

Steve Kovsky of C-Net radio co-hosts a program on computer and technology issues. He says that the public can easily eavesdrop. The government, like the FBI, can do one better. They can try and find the phantom callers.

A cell phone, or anything that uses radio waves, can be intercepted and with satellite technology, the government is capable of even honing in on specific targets. Just how well is still a mystery to the public.

There is a controversial, but unconfirmed system U.S. intelligence may be using now: It's a possibly mythical technology called Echelon with which they can pick up words. Many industry professionals believe that exists, agencies using technology to monitor airwaves, phone calls and high-speed computers searching for key words.

There is also a system called the Carnivore, that also helps intelligence agencies snoop on computer data.

But as good as the technology may be now, it isn't perfect.

The most wanted man in the world, Osama bin Laden, has been tracked with every sophisticated technological method available by U.S. intelligence. There's still no trace of him.

Despite all the advances in intelligence gathering, cell phone companies still claim they can't pinpoint a 911 call on a cell phone.

If you can post a link with the rules for field day, I wouldn't mind making a contact or two. For those who haven't contacted contesters, you generally need to reply with a grid location and a code that relates to your equipment, notably battery operated or not. If you don't have the rule handy, making the contact can be intimidating as the radio traffic is as fast as air traffic control.

12688. dreaded light bars [OT]

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-23 01:10:42 UTC
From: gary
Topic: 12681 Message: 12688

I went to the Vertical Challenge and they had a new CHP camaro. This particular vehicle was a black and white, not the all white stealth mobiles that will show up next week. However, the new light bar is very low profile. Here is a photo:
www.lazygranch.com/images/june2002/lights.jpg
I think they use LEDs now. When I told the chp officer the lights are hard to see, he replied "These lights can be seen for 8 miles in the dark". Then I said, "yeah, but they are hard to see if they are not turned on", to which he just smiled.

Hmmm, I have a Pro-92. I may not have much need of the trunked
system, as I'll be mainly in rural areas. And the info suggests that
they still use 49.x for rural areas.

From the article:

``President Bush is commanding all amateurs for participation in emergency preparedness,'' said Andy Korsak of Emerald Hills, in unincorporated San Mateo County near Redwood City, referring to recent announcements from the national American Radio Relay League. ``He wants us to listen more carefully for terrorists and suspicious communications, so we're all monitoring it a lot.''

I must have missed the day in my High School Civics class covered the basis of the President being able to "command all amateurs."

And as I read the ARRL announcement, President Bush _commended_ all amateurs for participation.

Or am I being a old fart?

Don
(who has 30 years in the hobby, and 28 in the emergency preparedness field...)

12699. Possible Bomb at Sonoma State ?

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-23 05:19:08 UTC
From: me262b2
Topic: 12699 Message: 12699

Hi All

Just heard over central dispatch (about an hour ago) that engine 9181 is being held at Sonoma State. I then heard 9181 indicate that the SO and Santa Rosa EOD were on scene. I have not heard anything on the Sonoma State PD freq or any SO or Santa Rosa freq about it. Any idea what frequencies they might use. I know they tend not to broadcast much at these events.

Sonoma State PD 153.740
County Fire dispatch 154.310

The vehicle was parked right next to the flight line. There was really no way to get a good photo of it. Maybe somebody who stayed later got a clear shot.

Just visualize a white Camaro, now put on the low profile light, some antennas, then add a CHPie with an empty citation pad.

From: Harry Marnell
Topic: 12681 Message: 12701

I passed one of the white Camaros with the low-profile light bar on northbound I-5 between Stockton and Lodi last Wednesday afternoon. Absolutely no idea what it was until I was right on top of the guy... though it was open, flat, straight hwy and I was in the right lane. A couple minutes later he passed me, then was stopped alongside me at the Hwy 12 offramp waiting for the signal. Even missed him overtaking me. D'uh.

Sharp car, very stealthy.

Harry

I'm half asleep so I hope i'm right -

856.4375 - Control 91 - Santa Clara County ambulance dispatch
857.4375 - Control 92 - Santa Clara County Ambulance to hospital.
Calstar 2 uses the above as a 'ambulance' in Santa Clara County.
854.0125 is our primary frequency to talk to CDF Felton - there's 2
different PL's, one for Mt. Vacca (Calstar 1), and one for Loma Prieata
(Calstar 2). These aren't technically our frequencies, but state
frequencies. You'll hear other people on it frequently - i.e. CTF (I
think, or CPF) units. the other 800 frequencies are the other sites,
however they're rarely used, and probably only the 'old-timer' FN's know them.

As for the last 3, what's Stanford Life Fl.? ;)

Sorry, dunno about those. I have one programmed into my HT that I called
Devils Peak - I've heard activity on that. Next time I load up the software
I'll redownload the radio and see what frequneciy it is.

The CHP is getting over 70 Camaros and spreading them throughout the state. Bay Area offices which get a Camaro will get only one, per the officer.

I believe the CHP got a federal grant to buy the cars for the specified purpose of putting more "commercial" officers on the highway. Interpret that these units are out to get the 18-wheelers. So CHP now has a hot 350 cid engine capable of 150 mph (and no radar) just to stop "speeding" trucks. Your government at work!!

One visitor was harrassing the officer (who remained quite cordial) because the CHP would be giving big rig drivers tickets, and two tickets would cost the driver his commercial drivers license and hence take away his livelihood.

The new unit had three rooftop antennas (black) which I figure is one VHF low band, one cell phone, and one scanner. From where I stood they looked to be Larsen antennas. Anybody know differently?

As to the stealth light bar; are those very bright LEDs or something else? The dude monopolizing the officer's time kept me from asking more than one question.

Stanford uses 130.5 as dispatch copter to hospital(Stanford only)(its nice
to be a private copter)
the 800's they use also sparingly

12717. Request: County fair freqs

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-23 16:00:18 UTC
From: Dave Steele
Topic: 12717 Message: 12717

Hello all,

Went the Alameda Co fair Friday night. I had my AR8000 loaded with all the freqs l could find on the web for the fair and none of them panned out.

So, if anyone has freqs for the Alameda Co fair or the San Mateo Co fair, Please post them.

Also, does the SO use a tac channel and/or special IDs for fair ops?

Thanks,

Dave

Countywide police network at risk

Healdsburg cites budget woes in decision to leave planned law enforcement dispatch system
June 23, 2002

By RANDI ROSSMANN and LORI A. CARTER
THE PRESS DEMOCRAT

A $12.6 million dispatch system intended to connect every law enforcement agency in the county may be threatened by state and local budget troubles.

Five months before the long-planned computer-aided dispatch system is scheduled to go online, Healdsburg is considering dropping out.

Petaluma Police Chief Pat Parks said it would be a "pretty serious concern" if any of the 11 agencies -- the Sheriff's Department and police departments from Sonoma County's nine cities and Santa Rosa Junior College -- withdrew now.

"There have been thousands and thousands and thousands of hours' planning," he said. "It's a huge, huge undertaking."

The dispatch system, informally called CAD, is to be coupled with a records management system that ties together every local police agency through a central computer server and computer terminals in each patrol car.

As law enforcement agencies sought financial and political support for the project, they said countywide communication could save lives, improve officer safety and potentially prevent a repeat of the Polly Klaas case, in which sheriff's deputies who stopped Richard Allen Davis near Oakmont weren't aware of the kidnapping a short time earlier in Petaluma.

On Monday, the city of Healdsburg took the first step toward pulling out. The City Council voted unanimously to give 90 days' notice of its withdrawal.

With the state coping with a $25 billion budget deficit, City Manager Chet Wystepek said Healdsburg expects to receive less money from Sacramento, which will force it to make its own cutbacks.

He said the CAD program would cost the city $125,000 to $200,000 annually.

"With the economy the way it is and concerns with the state budget, we're looking at areas that represent high-cost items to us, and that's one of them," Wystepek said.

Although it sent a letter to the other participants saying it would drop out of the dispatch network, Wystepek said the city would remain if it is financially feasible.

Though Healdsburg's possible departure will not derail the project, some say it will hamper its effectiveness.

"It ruins the efficiency when one or several pull out," Sheriff Jim Piccinini said. "But the bottom line is, there will be a system."

Santa Rosa Police Cmdr. Jim Reutlinger, who is spearheading the project for the consortium, warned that Healdsburg city leaders are mistaken if they think they can simply write off the $40,000 they've invested in the planning and be done with it.

"For them to walk away from it at this point," he said, "obviously there will have to be some kind of financial fee that the consortium will have to receive so we don't place the burden of them leaving on everyone else."

An agreement among the agencies has a clause guaranteeing "exit costs" for withdrawing from the consortium, said Ed Reed, a private consultant managing the project. For Healdsburg, he said they could range from the $40,000 that has already been spent to about $275,000.

After Healdsburg, some local agencies feared Petaluma would be next to pull out.

"I've not heard that Petaluma is backing out," Parks said. "But we are, as is every agency in the county, concerned about ongoing operation costs."

City Manager Fred Stouder didn't return calls seeking comment about Petaluma's commitment to the dispatch system.

Petaluma's annual cost will be about $400,000 for operations, maintenance and future replacements.

Parks said it's difficult to quantify the benefits versus the costs when public safety is at risk.

"It would only take one significant incident to make this equipment pay for itself -- a major kidnapping, an officer-safety bulletin, a career-criminal apprehension," he said. "If it saves one life because of information on the screen that an officer gets, or

prevents another Polly Klaas, is that worth" the cost? "Yes, of course."

While only Healdsburg has taken steps to drop out, other departments have concerns, including whether Healdsburg's exit would drive up their costs.

Sebastopol Chief Gordon Pitter said his city remains committed but he is taking a "wait-and-see" position about possible cost increases.

Cotati Chief Bob Stewart didn't rule out his city's departure.

"We're still a go, unless the prices change substantially," he said.

Reed said no other participants have voiced concerns to him.

"I don't think this will lead to other defections, but you never know," he said. "You never want to see the snowball rolling."

Load the usual FRS, MURS, GMRS, star and dot channels into your scanner, and you'll hear a LOT of stuff going on out there.

Do an FCC search on CA and "District Agricultural Association" and you'll come up with a lot of different frequencies.

Date: 2002-06-24 17:33:39 UTC
From: Chris Mayer
Topic: 12739 Message: 12740

This is all part of a conversion for fire to high band frequencies. The high band freqs are now primary fire dispatch, and it's all on repeaters, which the low band was not. The low band frequencies are still used for status changes (known as the turkey gobble) plus simulcast (sometimes). San Ramon Valley Fire has a simulcast high band repeater (but flaky at this point).

I assume another reason for the conversion is the mix of low band/high band/UHF usage. Ex-Riverview fire used high band (simulcast on low band), but everyone else used low band. San Ramon Valley Fire primary dispatch is UHF, including UHF portables with extenders to low band. I don't know if San Ramon will dump the UHF side.

160.110 ConFire Central County (Walnut Creek, Lafayette, Concord, Martinez, Pacheco, Clayton, Pleasant Hill) (ex 46.320/33.440)
159.735 ConFire West (Rodeo-Hercules, Moraga, Orinda) (ex 46.380)
159.615 ConFire East County (ex 46.180 & 154.385)
153.995 San Ramon Valley Fire (Simulcast from 46.440)

460.575 San Ramon Valley Fire Channel 22, primary dispatch
458.3125 San Ramon Valley Fire Extenders

From: blueangel_78
Topic: 12741 Message: 12741

Hi,

just heard Army 724 at 1115 was cleared by Moffett Field Tower for a right handed departure to the Ghost Town Departure. As 724 was clearing Moffett airspace, Ghost Town Frequency change approved. 724 sounded like a helicopter....perhaps one from the Vertical Challenge at San Carlos who stayed the weekend?

So what is "ghost town"? Shouldn't he have had to go thru Bay Departure?

From: caladded@aol.com
Topic: 12745 Message: 12745

First I heard they are discontinuing the 92 92 94 , I asked them about new scanners and they said no. BUT, they also said that if other scanner mfgs got into the digital stuff, so would they. So I would bet they are coming up with on or two. Still, while the price on my 93 and 2053 was pretty good, I have had it with RS. my next scanner will be the 250D. Since I could use another 780 , I will probably get the 785 next spring, but hold off on the digital card until there is enough stuff in the bay area to make it worth my while (and money) to get one. But I sure look forward to having a HH version of the 780.

I put some video of the Showcopters from the vertical challenge on my website, but I really don't have the room to leave it there. Download it in the next day or two before its history. The format is real media, so you need the real player. I encoded it at the best quality level they have, but of real media has a kind of jerky motion. The video will not stream, so download first, then play.

12748. Alameda county fair goodies

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-24 22:37:04 UTC
From: cowboymike1971
Topic: 12748 Message: 12748

Does anyone happen to know How far those wireless mic headsets travel and if so what freqs to look under? I was at the fair last night and I saw a bunch of vendors using them and I saw they had mag mount antennas above thier booths. How far does this travel? I live literally like two blocks behind the fairgrounds.. I also was curious to see if I could pick up any thing from the mics that the nightly big name entertainment uses. I already listen to security on 151.775 and maint. on 453.8875. Some very interesting and funny stuff at times. I also am hearing very very funny FRS comms. I suggest if anyone has the oppurtunity to scan at or near the fairgrounds give it a shot. It's a nice light thing to listen to to break usual cycle of grimness and unhappiness we usually hear..Oh yeah they also have a radio station on site 95.3

12749. Re: [bayscan] Alameda county fair goodies

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-24 23:36:59 UTC
From: Jake Hickok
Topic: 12748 Message: 12749

Before I moved out, my parents house is a quarter mile away from the fairgrounds here in Tehama County. Plenty of fun with remote broadcasting, wireless mics, FRS, business band, carnies and whatnot. The magmounts you see on top of the booths are all CB. They all like to talk to each other both on the road and while setup in camp. For CB freqs, business freqs and whatnot, you can try the "not finished but off to a good start" business page of NorCalScan.org at http://www.norcalscan.org/business/index.html

Wireless mics are lots of fun at a fair or other fairgrounds event. They range from VHF to 800/900Mhz freqs but the most popular I've seen in low-cost performing needs are the VHF wireless mics that operate in the VHF TV band.

Search between 174 and 216Mhz for those freqs.

The Radio Shack cheapo wireless mic systems are below the TV range in VHF. These are usually mom-pop setups and might be used by the magicians and small entertainment at the fair. They are also known in the wireless mic community as "travelling" freqs because they are licensed by the FCC for wireless mic usage only - limiting the amount of interference that might be found on the shared freqs with TV etc.
169.445
169.505
170.245
170.305
171.045
171.105
171.845
171.905

The more expensive wireless mics operate in the UHF TV portion. This ranges from 475Mhz to 806Mhz.

12752. History Channel Tonight

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-25 02:54:13 UTC
From: Robert W. Sanford
Topic: 12752 Message: 12752

There are two great shows on the History Channel tonight I thought some of you guys might want to catch:

9:00PM - 11:00PM My Father's Gun
A 2-hour history of the New York City Police Department as told through three turbulent generations of Irish-American cops. Based on his acclaimed memoir, Brian McDonald explores 100 years of pride and heartache, heroism and tragedy behind the blue wall of silence that separates a cop from the rest of the world. McDonald aims the white-hot light on the inner lives of his grandfather, father, and brother, and the result is an intimate family story within the context of a tumultuous social history. TV PG

11:00PM - 12:00AM The French Connection
This revealing look at the real-life drug bust that inspired the gritty Oscar-winning 1971 film offers insightful interviews with Eddie Egan, the NYPD detective on which Jimmy "Popeye" Doyle was based, and Sonny Grosso, the NYPD detective on which Buddy Russo was based, as well as their screen counterparts, Gene Hackman and Roy Scheider. From 1961 to '62, Egan and Grosso worked undercover to bring down a ring of French and Corsican heroin traffickers in New York City. Burt Reynolds narrates. TV 14

12757. Ful Moon is past, no?

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-25 06:39:26 UTC
From: ka5s
Topic: 12757 Message: 12757

Heard tonight, someone taunting LE and Fire. SO FAR, on Cotati Police 2, CHP extender, Sonoma County Sherrif 2, Rohnert Park 1, Petaluma Polce 1 155.595 and Santa Rosa Fire Primary. If I can hear him on the extender can that mean he's local? Or is it just that he's getting into the system somewhere?

Whoops he just came up on Sonoma County Sherrif 3. (about 2335)

I have a old HT that's opened (I won't sell it) - and the transmit side of each LE channel is programmed for 146.52 or 443.00 to avoid this kind of thing.

Cortland

12758. Re: [bayscan] Ful Moon is past, no?

From: Harry Marnell
Topic: 12757 Message: 12758

The extenders are very low power, like 0.3 watts, and you'd hear them only if you're very close by. The guy is probably pumping out a lot more power and you're hearing him direct.

Harry

PS - Good idea on the open radio... I do the same thing, with 146.52 the default TX freq for everything outside the 2-meter band

I have a neighbor who is CHP, so I am probably hearing his extender.
But I hear the Rohnert Park office quite a ways.

RP does not seem to transmit a tone on extenders, so I have that off.
On the other hand Sheriff DOES send tone and I was hearing them
there, also Cotatiti, so it looks like he is getting into the
repeaters. Which would take sending the right tone. I dunno Harry,
this could be a stolen radio. Didn't they have some stuff ripped off
some time ago? LE here have dualbanders? (Could be two radios at
that.)

12763. CHP adds speedy stealth to its arsenal

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-25 12:17:50 UTC
From: Robert W. Sanford
Topic: 12763 Message: 12763

CHP adds speedy stealth to its arsenal

From their high perches in the drivers' seats, commercial truckers pushing the speed limit often can spot police cars in plenty of time. But now the California Highway Patrol has a new breed of "ghost car" in the fleet.

The CHP is deploying its new arsenal of white 2002 Chevy Camaros today in a crackdown on trucking violations along Highway 101. The crackdown will run from 6 a.m. to 8 p.m. from central Los Angeles to the Oregon border, including Highway 101 in Marin, CHP Sgt. Wayne Ziese said.

Police hope the white muscle cars, with emergency lights that look more like roofracks, will be less obvious to commercial truck drivers, Ziese said.

"It's much harder for the truckers to see them," he said. "It's more like a commuter car than a police car."

After the Highway 101 crackdown today, the cars will be in use around the state. Seventy-three of the Camaros were purchased last year and recently were outfitted to CHP specifications, Ziese said.

Ten of the cars will be in use throughout the Bay Area.

Each car cost $24,000. An additional $1.2 million grant from the state Office of Traffic Safety is funding extra staff time for about 300 officers.

"If you've ever seen one of these trucks on your bumper, with 80,000 pounds behind you, it's a frightening experience," Ziese said. "We're hoping to adjust some attitudes."

Police also will be targeting car drivers who speed around large trucks at close distances.

According to CHP statistics, there was an annual average of 356 fatal collisions involving trucks in California from 1996 to 2000.

During that period, 2,081 people were killed and 64,110 injured in truck-involved collisions.

In Marin, the CHP recorded five fatal crashes involving trucks from 1996 to 2000. Police tallied 233 injury collisions over that period.

In cases where the trucks were at fault, less than 1 percent were a result of mechanical error, according to a statement released by CHP Commissioner D.O. "Spike" Helmick when the $1.2 million grant was announced in December.

"Truck-at-fault collisions are the result of poor driving," he said.

Hi Gang,

Heading up to Tahoe-Donner (Truckee, CA) in a few weeks and would like to have all the local public service (PD, Fire, etc...) freq's I may need. Does anyone have a listing or know of a good URL that would have a current/up-to-date listing?

Thanks,
Brian

FB? Fine Business?

I used the Pinnacle's Studio DV (the basic model, not premium) that comes with the IEEE 1394 card. I have Adobe Premiere as well, but it is much harder to use. Studio DV can make real media, avi, and mpeg. There is a great deal of flexibility in Studio DV as far as the bit rate goes. You can make really high quality videos (beyond DVD), but the Windows Media Player just chokes on them. [At least on my PII 350Mhz PC] However they play just fine on Cyberlinks PowerDVD (which plays either DVD, asf, avi, or mpegs). The video is quite smooth on with PowerDVD. I suspect winDVD would work as well.

I don't know if Real Producer is a freebie or not. The real audio encoder is free but you have to really look hard on the website to find it. If you had to buy Real Producer, I'd look for it bundled in some other video editor (Studio DV, etc).

I think the way to put video on a web site would be to use DivX once the decoders are free. Right now they are spyware, so few people are going to be willing to download your video if they are being snooped on or have to buy a decoder.

12769. Interesting BBC Story

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-26 05:49:20 UTC
From: Craig Rose
Topic: 12769 Message: 12769

Tuesday, 25 June, 2002, 13:47 GMT 14:47 UK

UK security details 'listed on web'

The safety of the Royal Family and top politicians is at risk because classified security details are being published on the internet, it has been revealed.

Radio scanning enthusiast Paul Wey is intercepting Special Branch and other communications and publishing their details on internet news groups, BBC Radio 4's Today programme has learned.

An intelligence source said Mr Wey was a "menace", whose actions could help terrorists commit atrocities and may have already been used to counter police operations.

Liberal Democrat home affairs spokesman Simon Hughes said the government must consider banning radio scanners, which are currently illegal to use but not to own.

'LIMITED HARM'

Mr Wey, from Hertford, told Today he had a list of frequencies used by security for any big events or organisations in London.

He admitted that what he was doing was illegal, but denied the information he was publishing would be "gold dust" to potential terrorists.

He said: "They would be aware of these things whether I published them or not", adding that the harm being done to national security was "limited".

Mr Wey suggested that his activities could prompt the authorities to take better care of security - for instance by ensuring that Special Branch's radio equipment was updated as it should be.

RESTRICTED

The intelligence source said Mr Wey and his website were "a severe danger to the public and to national security".

"It's basically what I would describe as an ex-directory publication of radio frequencies used by the government, security services, military and police and other emergency services throughout the UK."

She said the frequencies and files published contained "highly restricted" information.

The source called for the site to be closed down, as well as for scanners to be made illegal.

She said: "They can only be used for illegal activity. It's similar to saying to somebody: 'It's OK to have a gun, as long as you don't put bullets in it'."

MILLWALL SUSPICION

The source suggested Mr Wey's newsgroup may have been used by Millwall supporters to avoid police during riots at the south London football club on 2 May.

A month before the riots, someone claiming to be a Millwall supporter posted a message on Mr Wey's site.

It read: "We're always getting bothered by the police so want to turn it the other way around and watch them closely.

"Does anyone know the exact frequency or listen to police when Millwall games are on?"

Mr Wey said he would not entertain such questions on his website: "I'm not having people like that on the group."

However, the Today programme has seen evidence that Mr Wey provided the supporter with radio frequencies, plus information about police deployments and intelligence.

PROSECUTIONS

Speaking to the BBC Simon Hughes said: "The first thing that needs to happen is to make sure that the equipment that the police have is the best available.

"We have to make sure that our people doing this job have the most secure communications possible."

The options for action the UK authorities could take against Mr Wey are limited.

Most web groups like his are registered in the US and, as such, are out of bounds to the UK authorities.

But a Home Office spokeswoman said it was also illegal to publish transmissions on websites, and added that people had been prosecuted in the past.

She said: "The material would have to be assessed to see if any offence had been committed or if there was any civil wrong."

There is also the option of prosecuting Internet Service Providers which fail to remove the material if they know it is there.

The maximum penalty for listening to private radio communications with a scanner is a £5,000 fine and confiscation of the equipment.

Tuesday, 25 June, 2002, 13:47 GMT 14:47 UK

UK security details 'listed on web'

The safety of the Royal Family and top politicians is at risk because classified security details are being published on the internet, it has been revealed.

Radio scanning enthusiast Paul Wey is intercepting Special Branch and other communications and publishing their details on internet news groups, BBC Radio 4's Today programme has learned.

An intelligence source said Mr Wey was a "menace", whose actions could help terrorists commit atrocities and may have already been used to counter police operations.

Liberal Democrat home affairs spokesman Simon Hughes said the government must consider banning radio scanners, which are currently illegal to use but not to own.

'LIMITED HARM'

Mr Wey, from Hertford, told Today he had a list of frequencies used by security for any big events or organisations in London.

He admitted that what he was doing was illegal, but denied the information he was publishing would be "gold dust" to potential terrorists.

He said: "They would be aware of these things whether I published them or not", adding that the harm being done to national security was "limited".

Mr Wey suggested that his activities could prompt the authorities to take better care of security - for instance by ensuring that Special Branch's radio equipment was updated as it should be.

RESTRICTED

The intelligence source said Mr Wey and his website were "a severe danger to the public and to national security".

"It's basically what I would describe as an ex-directory publication of radio frequencies used by the government, security services, military and police and other emergency services throughout the UK."

She said the frequencies and files published contained "highly restricted" information.

The source called for the site to be closed down, as well as for scanners to be made illegal.

She said: "They can only be used for illegal activity. It's similar to saying to somebody: 'It's OK to have a gun, as long as you don't put bullets in it'."

MILLWALL SUSPICION

The source suggested Mr Wey's newsgroup may have been used by Millwall supporters to avoid police during riots at the south London football club on 2 May.

A month before the riots, someone claiming to be a Millwall supporter posted a message on Mr Wey's site.

It read: "We're always getting bothered by the police so want to turn it the other way around and watch them closely.

"Does anyone know the exact frequency or listen to police when Millwall games are on?"

Mr Wey said he would not entertain such questions on his website: "I'm not having people like that on the group."

However, the Today programme has seen evidence that Mr Wey provided the supporter with radio frequencies, plus information about police deployments and intelligence.

PROSECUTIONS

Speaking to the BBC Simon Hughes said: "The first thing that needs to happen is to make sure that the equipment that the police have is the best available.

"We have to make sure that our people doing this job have the most secure communications possible."

The options for action the UK authorities could take against Mr Wey are limited.

Most web groups like his are registered in the US and, as such, are out of bounds to the UK authorities.

But a Home Office spokeswoman said it was also illegal to publish transmissions on websites, and added that people had been prosecuted in the past.

She said: "The material would have to be assessed to see if any offence had been committed or if there was any civil wrong."

There is also the option of prosecuting Internet Service Providers which fail to remove the material if they know it is there.

The maximum penalty for listening to private radio communications with a scanner is a ?5,000 fine and confiscation of the equipment.

Just the kind of reaction I would expect from a government sleeping on the job. As if the evil doers don't have access to scanners. Perhaps the UK security detail could go encrypted and the problem would be solved.

Good judgment? If you depend on someone NOT listening to your radio traffic,
I would say such a person doesn't have good judgment.

It is the American way to disseminate such information. How long would the
Crown (white house comms) kept their pagers in the clear if l0pht didn't
publish their catering request intercepts on the net.

It's Pleasanton PD on one of their WIDE channels. It's also sometimes
used as a backup. 64048 is Livermore PD.

I suppose that I may be completely off target here, but considering the fact that scanner use (not ownership) is illegal in the UK:

"Liberal Democrat home affairs spokesman Simon Hughes said the government must consider banning radio scanners, which are currently ILLEGAL to USE but not to own."

It seems to me that someone might want to consider using just a wee bit more discretion when PUBLISHING frequencies and communications CONTENT if residing within a nation that has already declared scanner use illegal. You mention in your message that he only published frequencies, but that does not appear to be the case:

"Radio scanning enthusiast Paul Wey is intercepting Special Branch and other communications and publishing their DETAILS <my emphasis> on internet news groups, BBC Radio 4's Today programme has learned."

At any rate, and to avoid any hard feelings, I simply suggest that this is indeed my most humble opinion and does in no way reflect my strong belief that if radio communications are broadcast without encryption they are essentially fair game. As for the notion of judgment being relative...never mind :-)

Cheers!

12794. San Anselmo safety center gets upgrade

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-26 15:15:09 UTC
From: Robert W. Sanford
Topic: 12794 Message: 12794

San Anselmo safety center gets upgrade

By Haley Nolde

When Brenda Jo Smith started work as a dispatcher in the San Anselmo Police Department in 1987, she and her colleagues jotted notes from 911 calls on a steno pad, typed the information onto three-by-five index cards and stored them in a metal card catalog box.

Technology changed, of course, but not until recently.

In 1998, the department switched to a computer-aided dispatch system, run by a software program called RiMS, which integrates the dispatch system with a server that manages case records.

This month, San Anselmo completely remodeled its dispatch center for the first time since 1992, adding new digital telephones, flat-screen monitors, upgraded security cameras, ergonomic work stations and a new dictaphone recorder, which records 911 calls and radio transmissions.

Smith, now a dispatch and records supervisor, coordinated the $216,000 remodel and upgrade. The fully-integrated system unites emergency calls with dispatch information, management of case records and police officers' reports.

"It's tying it all together so the systems feed into each other," she said.

When a 911 call rings on the new digital phones, the computer automatically generates an incident form on the flat-screen monitor. The software assigns each call a case number and stores the file in the computer, as opposed to the three-ring binders where cases formerly were logged by hand.

Call times are recorded automatically and synchronized with an atomic clock in Boulder, Colo.

Until the remodel, the dispatchers' work station was so cumbersome that they used a two-foot wooden stick with an eraser taped to the end to press buttons on a phone they couldn't reach from their monitors.

The new set-up "is much better. It's a lot more user-friendly," said dispatcher Denise Stinson, who was hired in March and worked her first day out of training this week.

In addition to ergonomic work stations, the department's six dispatchers and two reserves are enjoying new carpet, relocated air-conditioning vents, a small refrigerator and personal lockers.

"I wanted to make sure we had everything we needed to keep the dispatchers comfortable because this is a stressful job." Smith said.

"9-1-1 systems are set by the state to be upgraded every seven years," she added.

But, because of an overhaul in the way the state finances emergency systems, a freeze on state grants held San Anselmo in limbo.

"We hadn't had the phones upgraded in 10 years," Smith said.

Since the 1998 purchase of the RiMS system, San Anselmo has added bits of new technology when funding was available.

For example, officers can write reports from small computers in their squad cars and upload them into the RiMS program back at the station.

Eventually, wireless technology will allow them to file reports from the field.

"It's an integrated system so it really is a seamless whole," said Cmdr. Jim Providenza, the San Anselmo representative and chairman of the Marin County Police Chiefs Association Technology Subcommittee.

As leader of the committee, Providenza had a hand in the preliminary groundwork that led to the Marin Emergency Radio Authority, formed to build a $26.9 million, countywide public safety radio system.

The need to prepare technologically for MERA inspired the remodel of San Anselmo's dispatch center, and others that are planned or under way around the county, but the MERA project is months behind schedule and over budget. The authority is locked in a legal stalemate with Tiburon over plans to erect an antenna on Mt. Tiburon, which neighborhood groups have opposed adamantly.

"It hurts," Providenza said of the delays.

"There's no good reason to put citizens in jeopardy because their public safety people are trapped with their hands behind their backs. I understand the neighborhood groups don't want an additional antenna, but I can't agree with it."

The San Anselmo dispatch center incorporated space for the computer-driven MERA radio, which dispatchers can operate using a mouse.

No town money was spent on the department's overhaul; the police department paid for it with $53,000 in MERA bond money and the rest in state technology grants.

The new system allows dispatchers to dial a phone number, or even groups of numbers, by clicking an icon on their screens. They can close the bullet-proof glass window to the front lobby with the click of

another icon - a comfort to dispatchers working at night.

The software saves commanders time and aggravation by compiling the crime statistics that police agencies must send to the state each month, a task that once involved tally sheets, hours of time and error-riddled math.

They've saved space as well. The new dictaphone recorder that records 911 calls and radio transmissions resembles a VCR, while the old one is as big as a refrigerator.

It is stashed in a shed in a parking lot, along with boxes of the old reel-to-reel tapes it used - each about one foot square and capable of holding only one day's calls.

Required by the District Attorney's Office to save tapes for 100 days, the department had to throw out older tapes because of storage space restrictions. "With this, we'll never throw one out," Providenza said. Calls preserved on the new recorder can be transferred to DVDs. "You can hold 20 years' worth in a little box," he said.

During remodeling, calls to San Anselmo's dispatch center, which covers San Anselmo, Ross Public Safety and College of Marin, were transferred to Fairfax. With only two weeks' time, contractors were held to a strict schedule. "We had 12 men on ladders demolishing the dispatch center," Smith said. "Within two days, the place was gutted."

Cooperation among agencies is important, Providenza said, noting that the county technology committee is working toward a wireless data sharing system among all county police agencies.

Officers in the field can access information compiled by the state, such as criminal records, missing persons status, vehicle records and drivers license information.

But an officer who wanted to check a suspect's record in a Marin city would have to call each agency to request a records check.

One day soon, Providenza said, police will have wireless data sharing with agencies countywide.

I saw this cool parked in the parking lot at my job today.
It was a Chevy Impala with government plates, a shotgun and various radio equipment inside, smoked windows with a warning on the side stating "police dog, keep away".
When the owner of the vehicle came out I asked him what city he was with expecting him to tell me some local city but he said he was with the State Police. I thought that the State Police were replaced by the CHP a long time ago but I guess there are still State Police around that serve a different function.
Does anyone know about this?

I uploaded a picture I took of the car to:

Did you note the plate #? What bands were the antennas (I see a
regular-sized AM antenna, so it isn't a disguised 42 MHz whip...)

> equipment inside, smoked windows with a warning on the side stating "police
> dog, keep away".

That car's a bit long in the tooth...

The California State Police Division of the Dept. of General Services
was absorbed into the CHP about 10 years ago. No one that I know of
still uses "State Police" as an organization name in California.

Thinking about it though, it could be:

(1) California State University Police (Sonoma, CSUSF, SCH Hayward)
(2) One of the UC campus police organizations (almost I have seen do
not use black cars...
(3) California State Hospital Police (Napa, etc.)

Do you work near any of these?

Don

Nope they were exempt plates and there were 3 antenna's on the trunk all of the UHF, VHF band.
I didn't look at the radios too closely but they were Motorola Spectra's so they could have been on various bands.

Something's wrong with that picture. Did the person have the police officer look? Was there a dog in the back? Most government cars I've seen have the pie plate hubcaps. People - don't get the wrong idea with this, but get a Ford or Chevy, tint the windows, throw on a pair of <E> plates off ebay, and you'd never get pulled over again. It seems sketchy that anyone asked would say "State Police" when state police has been debunked for 10 years, but on the other side of the coin, anyone who knows enough to put antennas and radios in a car should know NOT to say State Police.

Ok, radios, "KEEP AWAY POLICE DOG", tinted window - could be a wanna be cop. <E> Plate is pushing it. Shotgun? If the guy got cought with everything but the shotgun, it'd be bad. But WITH the shotgun? Felony, possibly. Perhaps he didn't want to say who he worked for? A couple years ago (IIRC, it was right before CSP was debunked) I was in a restaurant (Fresh Choice) and saw about 7 people, all wearing suits and ties. Looked like business people. One guy reached over to grab something, and I cought a glimpse of a semi-auto in a holster. The debate at that point - call the police and advise them, or leave it alone? I was close to calling the police when I then saw the other person in his party have a State Police badge on his belt.

Maybe this should be another discussion, but what's the concensus, preferably from Police officers? If someone like us here (well informed, in the hobby) sees a person carrying, should we call the police? Should we 'ignore" it? What's a hint on that?

Well the more I think about maybe he didn't want to deluge what department he worked for and just didn't expect me to know that the State Police were not around anymore.
To me he looked like someone that would work in the Narcotics division (just my gut feeling) and be involved with major drug busts where a canine unit was needed or possibly wanted felons.

Ill e-mail the picture along with his comment to a few people I know in law enforcement and see what they say and post it back on the list.

Maybe this is something that could be done? Or maybe not. It's early, and my brain isn't functioning well...

Phone it in to the local PD or CHP as a suspicious vehicle. Tune your scanner into their frequency, and listen to the broadcast. Perhaps it would disclose its true identity?

12827. Santa Rosa Hazmat Incident, Mercury. Wednesay night

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-28 00:03:10 UTC
From: Cortland Richmond
Topic: 12827 Message: 12827

Last night while I was a the laundry I heard a Santa Rosa Fire dispatch (154.145) to two or three employees contaminated and a smell of mercury throughout the facility, apparently a residential facility. FD and Hazmat 5 responded and had the situation cleared up in pretty rapid order. Now I have to look in the paper and see what it WAS.

Topic: 12828 Message: 12828

I was away from the scanner for awhile, but at least one strike team just sent. 2 helos and 1 air tanker working with another tanker sitting at Hollister. Did hear them earlier say they were using CDF Command 1 , tone 4 (151.355). Have not heard an update on acres or anymore structures. In addition to Craigs' post on units, San Jose also had sent 4 other brush patrols.

One thing to keep in mind is the car isn't a Caprice, it's an Impala which are *not* cheap cars. Typically an agency won't buy an Impala as the 9C1 Caprice with the LT1 engine serves the same purpose, plus is a lot cheaper. If it's a converted Caprice, then things are even stranger. In most cases an agency having an undercover Impala would be from a seizure or something similar. Some HPs have used them but more for highway enforcement.

I think it's definitely something worth having investigated. Robert, were the plates newer CA exempt or the older style? If older style, and he says he was State, then the plate would have the diamond around the 'e'.

As far as I know, the CHP took over the State Police a few years back, however the State Police
still exist. They patrol and guard state buildings, and property.

12836. Scanning Nevada Highway Patrol

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-28 16:38:23 UTC
From: reno_huskerdu
Topic: 12836 Message: 12836

I just took a trip across Nevada and up to southern Idaho. My route was across 80 from Truckee to Wells, up to Idaho, and back a few days later. Using a Pro-92 and a 2m/70cm roof-mount antenna, I monitored the following freqs non-stop:

42.5
42.56
42.7
42.74
42.8
42.88
42.94
151.04
151.055
151.07
151.085
151.115
151.145
151.265
153.92
154.025
155.445 (control data heard)
155.46 (control data heard)
155.565 (control data heard)

The VHF low freqs were absolutely dead. Nothing broke the squelch at all. I suspect that NHP is no longer using those freqs, even in rural areas. A lot of my route was pretty darned rural. It doesn't get much more desolate than 80 east of Reno.

The 150 freqs were on the other hand quite active. I did not program them as trunked freqs, but they scanned just fine anyway. I did not hear any control channels except around Reno. The control freqs I heard there were 155.565, 155.46, and 155.445 - I simply locked them out. I passed thru Reno during the evening or weekend, so almost all the traffic was police, even though I was not trunking. I suspect that NHP is using these same freqs for both rural and urban, but simply not trunking them in rural areas.

NHP uses 10 codes that differ from CA. 10-6, for example, means traffic enforcement stop. They also use less brevity codes in general, more plain language, and I don't believe that I heard any Penal Codes used.

The NHP really smoke when they are pursuing speeders. Their Crown Vics must all have the Interceptor package. When you call in to

report a big rig being driven in an unsafe manner, the NHP takes it very seriously. They ask you if you're willing to sign a complaint. If so, you go to court with the Trooper and testify against the offender. If CA did that, maybe we'd have less big rig fatalities. Big rigs cause 11 times more fatalities than cars. It's just a matter of physics.

Big rigs in Nevada are required to leave 500 feet clear in front of them on the freeway. So anything resembling tailgating is patently illegal, and very easy for Troopers to spot from a distance. It's refreshing to see so many big rigs not tailgating. It's also very refreshing to get out of CA and see so few people driving like the pinhead aggressive speeding *ssholes we see around the Frisco bay area etc. The speed limit in Nevada is 75 for everybody including big rigs, and almost nobody was going much faster.

12837. Scanning Idaho LE freqs

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-28 17:09:35 UTC
From: reno_huskerdu
Topic: 12837 Message: 12837

I just took a trip up to southern Idaho. I spent some time in the general Twin Falls area. Using a Pro-92 and a 2m/70cm roof-mount antenna, I monitored the following freqs:

455.45
453.525
453.65
453.9
458.45
460.05
460.2
460.25
460.275
460.35
460.375
460.5
460.525
465.05
465.45
465.5

I didn't pay much attention to what traffic I heard on which freq, but in several days of scanning I was able to notice a few interesting things.

1. There seems to be a lot more mutual aid among departments in that area. Twin Falls city PD, Twin Falls County SO, and Idaho State Police work together much more often than you hear on the radio here in the bay area. They have mutual aid freqs just as we do, but theirs are very active. I rarely hear activity on LE mutual aids freqs in CA.

2. There is a very proactive stance on the part of Dispatch regarding officer safety. Each officer seems to be queried frequently on his status. If a given officer does not respond, another is sent out immediately to check on the first at his last known location.

3. Dispatch radio traffic is impressive. These are no country bumpkins. They are at least as professional and crisp as CHP in the bay area. 27s/28s/29s are returned very quickly. It was not uncommon to hear the complete info returned to the officer as soon as he finished reading off the plate, SSI, or driver license number and unkeyed his mic. You might say "sure, that's because Idaho is a less populous state and as such it has less records to search" but consider that they also ran a lot of checks on out-of-state plates. I'd estimate that about 40% of radio traffic was related to out-of-

state plates. They still returned info very quickly.

4. Plain language was used more than brevity codes. Only the main brevity codes were used. I did not hear any Penal Codes used. If somebody broke a windshield trying to attack somebody, the radio traffic would say that instead of saying "242." Reckless driver reports were broadcast as such, not as "BOLO for 23102 driver."

5. And just like in Nevada, if a citizen called in a dangerous driver, they had the option of signing the complaint themselves and going into court with the officer to prosecute the offender. Too bad we can't do that in CA.

Idaho drivers are so polite that they make us seem like professional hockey players by comparison. There were virtually no PASADs (pinhead aggressive speeding *sshole drivers) like we see around the Frisco bay area etc. The speed limit in Idaho is 75 for everybody except big rigs, and 65 for them. Virtually nobody was going much faster. Speed limits also seem to be strictly observed on city streets. There was just the occasional aggressive jerk going 10 over. Virtually nobody tailgates. Considering the widespread lawlessness we have in CA, Idaho is a much more law-abiding state.

12838. Re: State Police???

Yahoo group: bayscan (2002-01 — 2002-06)

> like business people. One guy reached over to grab something, and I cought a glimpse of a semi-auto in a holster. The debate at that point - call the police and advise them, or leave it alone?

Criminals don't travel in groups, wearing business suits and carrying guns in shoulder holsters. That only happens in movies. Criminals rarely use holsters at all. The stereotype of a professional, wealthy, smooth crook blending easily into society is by and large an artifice of the violent media subculture we call TV/Hollywood. In real life, cops can and do spot crooks.

And there are a lot more cops around you than you think. Off-duty cops are virtually always armed. Try going for a ridealong with your local PD some time. You will be surprised to learn how many cops are out there. Thank God...we need all we can get!

Control 12 is the County Parks & Recreation Dept.
You are most likely listening to the Park Rangers.

Brian,
control 12 is used for Santa Clara County parks, the park rangers use the cannel and patrol the county parks I believe. It can be interesting to listen to especially if there is a fire or other activity in the parks, that's about all I know. I always seem to put this frequency in my scanner and I can here it pretty well from Richmond. good scanning.

No, it's not received here in Santa Barbara. Although it may be heard in parts of Obispo County and possibly northern Santa Barbara Co. I have heard the Catalina Island Conservancy on the frequency with a PL of 103.5 from here.

Hubert

Then you have to wonder how many black and white camaros were purchased. If it wasn't for this black and white seen at the helicopter show, I would have said there were no black and white camaros.

One of the interesting facts I learned by riding along with my local PD was that CHP is funded largely by vehicle registration fees. So what they buy with those public funds is a matter of public record.

I don't believe that is correct. All those fees go into the general fund. It took a proposition to get the gas fees to be dedicated to roads and/or transportation. At the moment, they go into the general fund as well.

In theory, the none of the states have black budgets, so all the funding and expenditures should be public record.

The road that goes behind to the east of UC Berkeley is closed off and some of the UCB trunked system chatter makes reference to Berkeley Fire units. One of Oakland PD's helicopters just flew over (N510PD, a 369E variant of the Hughes/MCD 500) to take a look. BPD and BFD are quiet about it.

From: Daryl Jones
Topic: 12870 Message: 12871

154.370 is used in San Mateo County and is known as Control-2. It
is a secondary channel that's used primarily for freeway responses,
but may be assigned as a tactical channel.

It is currently used in simplex mode, however duplex multi-site voted
repeater operation will start in a few weeks.

From: caladded@aol.com
Topic: 12870 Message: 12872

Hmmm, San Jose has an Engine and Medic 31 but not on that freq.
that is Control 2 for San Mateo County, but I doubt Engine 31 uses it, they are in Hillsborough and to my knowledge they don't have a medic unit. I am pretty sure that FREQ is used in the Monterey/Salinas area, could be there.

Rap groups and their followers have made plenty of trouble. KMEL has promoted at least 3 of these in the past few years that have caused LE big problems. One at Bill Grahams' amp in Mt View, one in Sunnyvale Town center and another earlier this year at Great America which caused Santa Clara to call mutual aid from CHP, S/O, Milpitas, Sunnyvale, Mt. View and 40 Officers from San Jose. I would hope cities and places say NO to this crap.

Aside from judging something by its fruits, i find "C"rap music offensive because of its demonization of women and many
other segments of society as well as an often glorification of violence. While "C"rap artists have a First Amendment
right to write, sing and produce it, the State has a right to place reasonable restrictions as to time, place and manner of
that expression. And with the incidents of breaches of the peace arising from its public performance, it would be well
within the province of the State to permit its public performance to large audiences.

12881. Re: [bayscan] Online scanner feed..

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-30 06:33:10 UTC
From: Evan Platt
Topic: 12859 Message: 12881

Duh.. ;)

I'm located in Sunnyvale, and I take requests. I currently have:
VHF:
Mountain View Fire
Palo Alto Fire
CDF Morgan Hill
CDF Felton
Clemars
Calcord
Santa Clara County fire control 1,2,3,5,12,13,14,21A,21b,22,23,24,25,31a,31b
Santa Clara County fire control

UHF/800:
Sunnyvale PD
Sunnyvale FD
Mountain View PD
Moutanin View CH 2
PAPD Ch 1
PAPD Ch 2
Come to think of it, perhaps me and Ben should get together and figure out
what he doesn't have and I'll try to fill the gaps rather than dup it.

Any suggestions anyone?

Evan

Don't get me wrong, I fully believe in music all types. i also believe in the first ammnd. I just believe there are kinds of people who cause "problems" no matter what the event. "Some" ruin it for all. I have been at other concerts and events where a small group ruined it for others. It's not just rap music and it's follwers.

hmmm...didn't Woodstock elicit the same type of behavior as
these "rap concerts"? fires, harassment, lewd conduct? Seems like
the behavior is the same but the music has changed. So why don't we
just ban all concerts? I always thought that the symphony going
crowd looked a little suspicious in those tuxedo's. but then, I
guess I am just generalizing, and as we all know, that IS WRONG!

Isn't dressing alike, especially in a signature color, a sure-fire gang indicator? ;-)

No, not only rap, BUT look at the numbers of problems at "Classic" concerts , " Country & Western" concerts. Heck, even while the Dead heads maybe an, lets say "interesting" group, I don't recall the large amount of violence associated with those concerts although there certainly have been problems with that group too. No, your right, NOT just rap But they sure have MORE problems than most other types of music concerts.
my 2 cents

True, but its on a "need to know" basis. If they feel that the general
public doesn't need to know it, they won't release it.

Dear God! For the love of Alviso, can we talk about scanning, or at least about something somewhat worth the bandwidth? I for one don't give a c"rap" about what music anyone listens to as long as it doesn't interrupt my sleep patterns ;-)

Just a post to rile everyone up!

Cheers and happy Sunday.

low profile lights have been blended into the top of crown vic cruisers some online catalogs for lightbars show what it looks like. Maybe Galls.com shows it, I do know it is in their catalogs that occasionally get in the mail.

12891. Scanning Air Ambulances

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-30 20:56:57 UTC
From: robgroups
Topic: 12891 Message: 12891

I've moved to within 1/2 mile of Edan Hospital in Castro Valley.
At least two or three times a week I see air ambulances fly in.
I'd love to listen in. Are they on ALCO trunk, or seperate
frequencies? Thanks for your input!

Rob Mages

12892. Scanning and the Durango, CO fire.

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-06-30 21:29:29 UTC
From: robgroups
Topic: 12892 Message: 12892

By trade, I'm a field service engineer out of Castro Valley (Hayward), California. I've had scanners just to see what is happening when I hear a siren in the area.

Last week, I had to go to Durango, CO. As you know there is a forest fire close to there: I didn't know how close! I realized the fire was close as my 30 seat plane landed Tuesday afternoon. Upon getting off the plane, I realized it was time for a new desktop trunked scanner! I drove to the local Radio Shack store to see what they had in stock. It was a mad house! Everybody was buying scanners. Unfamilure with the "cutting edge" of scanner technology, I purchased a trunk tracker with RS-232 capability (Durango is in the mountains, and has NO trunking within 100 miles!!). The sales person supplied me with a couple of xeroxed pages with local frequencies.

As I sat in my hotel room programing these frequencies into the scanner, I heard the local fire department dispatcher asking a volunteer to check a local residence because he's fighting off the flames on his back porch! Ther reply was of course, that can't be true because the BIG fire is 5 miles away.

The short end of this story is this was the start of a SECOND fire threatening the town ! I heard how they fight a fire: I heard how the fire started: I heard the the worry and anguish of the voices of the people fighting the fire and the fustration of the fire department on how to evacuate people with only one road out. This fire was within 2 miles of the city line! Within 24 hours this second fire was in control after burning 6 houses down: the origional fire is still threating.

Scanning should be more that entertainment: It should be a learning experience! It was and will be for me!

Rob Mages
Castro Valley, CA

12893. Secret Space shuttle flight???

Yahoo group: bayscan (2002-01 — 2002-06)

Hey guys and girls. I walked in on a TV news story last evening where I think they said that the space shuttle Indeavor had secretly launched and returned two of the crew from the International Space Station yesterday. Does anyone know anything about this? I couldn't find anything on the NASA site about it, but they they said, "secret". Jim

I don't think so.
Endeavour was the last shuttle craft to fly, and touched down at
Edwards on June 19th after visiting the ISS. Video on the KSC website
<http://www-pao.ksc.nasa.gov/kscpao/shuttle/countdown/sts111/land-vidtoc.htm>

I don't think even Lockheed-Martin can fly a shuttle cross-country
and turn it around to fly again in a week - even if a lunch window
was open, or if the shuttles were flying - which they are not at the
moment while NASA looks at a fuel cell problem...

Don

Endeavour returned to KSC yesterday after a two-day ferry ride on the
back of a 747 from Edwards AFB. The secret part was the routing, which
is unusual.

You have an active imagination :-)

No guys, I really did hear something like that on the news but thought it was a screwed up story as I am aware that Indeaver was the shuttle up there earlier this month. And, Jordan, you are certainly right about a Secret launch! Ha Ha, some secret, but guess by secret they would just not publicize it like all previous launches have been. Jim
